GENERAL DESCRIPTION: The LaPerm is a naturally occurring mutation producing both long and shorthaired cats. It is medium-sized and curly-coated, with a semi-foreign type body. All colors are acceptable. All parts of the body are in harmony with the size of the cat. There is evidence of surprising weight for size. The cat is alert and seems to be walking high on his legs. Coat texture will be distinctly different than that of any other Rex mutation and will vary within the breed. Whiskers will be very long and curly, ear furnishings

and eyebrow hairs may also curl and may grow long enough to curl into eye. The perfect cat will have a moderately soft, but textured coat that will be loose and bouncy, standing away from the body, resembling a "Gypsy Shag". A coat you can run your fingers through to the skin but will appear very curly. The cat will have ringlet type curls at the base of the ears and on the underside of the neck running into the ruff on the longhaired version. The coat should be free of matting, so it should not be too thick and heavy.

ALLOWANCES: Locketts; a frizzy-type appearance. Lack of ear furnishings and/or lack of, or short, whiskers in kittens.

PENALIZE: Lack of ear furnishings (LP). Lack of, or short whiskers..

WITHHOLD ALL AWARDS (WW): Cobby body, short legs, straight coat.
