

THE INTERNATIONAL CAT ASSOCIATION, INC.

2017 Winter Board Meeting

January 25-27, 2017

Holiday Inn at Portland Airport

8439 NE Columbia Blvd Portland, Oregon

Open Session

January 25, 2017, Wednesday, 9:00AM

	ACTION	TIME	PAGE
Welcome and Call to Order			
1. Roll Call	Mays	Verbal.	-
2. Welcome Board	Mays	Verbal.	-
3. Fiduciary Responsibility	Adler	Verbal.	-
Consent Agenda			
1. Minutes, Corrections/Additions	EO	Approve.	-

Executive Session

(See Executive Agenda)

January 26, 2017, Thursday, 8:30AM

ACTION

TIME

PAGE

Governance

1. Future Meetings

- a. Spring Meeting 2017 Mays. -
 May 18 - 21, 2017-Harlingen, TX
- b. Update on 2017 Annual Harrison. -
 August 30 - Sept 1, 2017 - Corpus Christi, TX
- c. Update on 2018 Annual Patton.. -
 August 29 - 31, 2018 - Birmingham, AL
- d. Update on 2019 Annual Mahan. -
 August 28 - 30, 2019 - Las Vegas, NV

Fiduciary

- 1. FY2016 Audit Report Fisher Receive. to be furnished
- 2. Budget Report Fisher Receive. to be furnished
- 3. Set Winter Meeting BOD Board Approve. -
 Reimbursements
- 4. Marketing/Business Development Fulkerson. to be furnished
- 5. ViaGen Pet Services Russell. -

PROPOSALS

Judging Program

- 1. Amend Judging Program(Remote Areas)
 43.2.5.4 and 43.2.5.8 Faccioli Approve. 5
- 2. Amend Judging Program(Query on resignation process Article 12)
 Add 412.7 and 412.8 Anderson Approve. 6
- 3. JA Duties Mays Approve. 8
- 4. Ring Clerking Requirements
 Amend 42.2.5 Stadter Approve. 9
- 5. Entry Clerking Requirements
 Amend 42.2.6 Stadter Approve. 10

Standing Rules

- 1. Amend Standing Rule (Annual Rotations)
 Amend 109.1.1.1 Vlach Approve. 11

Show Rules

- 1. Exhibitor responsibility reference infectious/contagious cats
 Amend 23.6.2.1 and Add 210.6.1 Klamm Approve. 13
- 2. RD approval for shows
 Amend 22.1.2.1 Stadter Approve. 15
- 3. "Prior Conduct" rule
 Delete SR 23.6.5 Jones Approve. 16

By-Laws

1. Amend 114.3.1 (Write-Ins)	Vlach	Approve.....	18
2. Amend 114.3.2 (Voting process)	Vlach	Approve.....	20

FOLLOWUP Report

EO/Stadter Approve.	22
--------------------------	----

Discussion Items

1. ENFI Agreement	Bourreau/Vlach
2. Pedigree from Chinese Assns	Dickie
3. CCCA Representative - China	Mr Luo
4. Non-Domestic Hybrids	Hutcherson
5. IT Report	Robinson

January 27, 2017, Friday, 8:30AM

	ACTION	TIME	PAGE
Breed Advancements			
1. Poljun	Zgrabczynska		
a. EXP to RO		23
b. Rules Comments (See supplemental Info)		25
2. Scyth Toybob	Hill		
a. EXP to RO		26
b. Rules Comments (See supplemental Info)		28
3. Toybob	Denny		
a. EXP to RO		29
b. Board Liaison Appointment	Approve.		-
b. Rules Comments (See supplemental Info)		31
4. Longhair Bengal	Symmes		
a. Advance to CH	Approve.		32

Breed Presentation			
1. Highlander	Struck/Lively		
a. Standard Amendment	Approve.		34
Breed Committee Appointments			
1. American Curl	Bull		
a. Requirements met	Approve.		-
2. Tennessee Rex			
a. Membership pending	Scarrow (Nelson)		
b. Working Breed Chair	Appoint.		-
c. Board Liaison Appointment	Appoint.		-

SUPPLEMENTAL INFO

1. 2016-2017 Show Season Counts..	36
2. 2016-2017 Show Season Detail Report.	37
3. 2016-2017 Show Season Regional Detail Report.	40
4. Weekend Catalog List.	55
5. Show Balances.	58
6. Active Regional Clubs..	59
7. Poljun.	73
8. Scyth Toybob..	83
9. Toybob.	103

Amend Judging Program 43.2.5.4 and 43.2.5.8 (Remote Areas) - Faccioli

Rationale:

There are two discrepancies on the Judging Program referred to the applicants from Remote/Developing Areas. According to 42.2.2.1, an applicant from a non-isolated area must be a TICA member for a minimum of **4 years prior to the effective date of a TICA Probationary Specialty Judging License**, and according to 42.2.11, prior to being granted a Probationary Specialty License, breeder applicants **must have been breeding cats for 4 years**. Article Three was created in order to make the whole process easier to the applicants from remote/developing areas and the idea was surely not to make the requirements more restrictive to them. But according to 43.2.5.4, an applicant from a remote/developing area must have been a TICA member for a minimum of **4 years prior to application** (it means, to enter the Judging Program) and according to 43.2.5.8, that applicant **must have been breeding cats at least 5 years**.

Amend JP 43.2.5.4:

43.2.5.4 Must have been a TICA member for a minimum of 4 years prior to ~~application~~ **the effective date of a TICA Probationary Specialty Judging License.**

Amend JP 43.2.5.8:

43.2.5.8 Must have been breeding cats at least ~~5~~ **4** years and have a minimum of five TICA registered litters.

Rules Committee Comments:

(A): Fine with me

(B): Okay with me!

(C) I agree

(D) I agree

Add Judging Program 412.7, 412.8 (Resignations) - Anderson

Rationale:

The Board asked that I submit a rule for consideration regarding the resignation of a judge. There is already a rule for Board Members in the ByLaws 15.4, so I just lifted the same to submit it - changing out Board member for judge.

This is what it already says for Board members:

15.4 Resignation of elected officers shall take effect immediately unless the resignation itself states an effective date, in which case the resignation shall become effective on the stated date.

(Rules note: Following internal discussion, additional wording was added to clarify the resignation process and also re-instatement. Article 12 was amended rather than introducing a new Article 13 which would then require significant re-numbering of the rest of the document and then cross-checking against this and all other Rules for updated references).

Amend Article title:

ARTICLE TWELVE - Leave of Absence **and Resignation**

Add new rule 412.7 and 412.8:

412.7 A resignation submitted by a judge shall take effect immediately unless the resignation itself states an effective date, in which case the resignation shall become effective on the stated date. A judge can subsequently withdraw their resignation, provided that the withdrawal is made before the effective date.

412.8 Following their resignation, a judge can apply for re-instatement as set out in ARTICLE ELEVEN.

Rules Committee Comments:

(A) I have been thinking about this and while I understand that it needs to be spelled out, but I would like it to be a process. Usually, if one is resigning from a job or position, the supervisor asks what is going on, especially if it is unexpected. Sometimes I think a cooling off period is needed and then to be revisited

(B) Playing Devil's Advocate, Judges are adults and if they submit a formal resignation letter then they should understand the consequences of doing that. Nevertheless, I can understand the point you make.

(C) I'm sorry - I tend to agree with (B). and I'd expect that if someone hands a resignation to Marylou or Fate that they would have a talk with them about it - and at that time they could determine if there needs to be some time for the person to 'cool off' and reconsider it.

(D) The rule submitted allows for the resigning judge to put an effective date in place so the option is there to give oneself time to reflect and obtain counsel. When one resigns there is also the opportunity to at some point apply for reinstatement.

(B) I am seeing both sides have valid points. I suggest an addition to the proposed 412.7 and a new 412.8 - to make clear that a judge can withdraw their resignation - unless it is immediate - and that there is a process for re-instatement:

(A) I like that idea!

(E) Fine with me too.

Amend Judging Program – JA Duties (Communication) - Mays

Rationale:

The section of the TICA Judging Program pertaining to the Duties of the TICA Judging Administrator does not contain anything regarding the fact that the Judging Administrator (JA) must effectively communicate with all TICA Board members, TICA Judges, and any other TICA members (or others) applying as judges or guest judges. There is also no mention that the JA must communicate verbally and in writing on a timely basis to allow deadlines for those involved to be met or to acknowledge receipt and the outcome of any complaint(s). Many requests for information are time sensitive to meet deadlines, and often agenda items for TICA Board meetings are delayed awaiting required paperwork. Judges have deadlines to send their judging books to the TICA Executive Office (EO) within a certain period after the completion of any show they judge, so it is not unreasonable to set deadlines for the JA.

Add to DUTIES OF THE TICA JUDGING ADMINISTRATOR:

- **Communicate effectively and timely with all members of the TICA Board, TICA Executive Office, TICA Judging panel, and TICA members (or others) applying as judges or guest judges or submitting complaints verbally and in writing as required.**

Rules Committee Comments:

(A) I guess that's implied in all jobs to communicate with those you are administrating – But the proposal is rather vague in what it considers "effectively and timely".

(B) It is implied but when it's not done in a timely fashion it creates issues such as getting the agenda out for board meetings, reviews on judges, etc. Effectively and timely means within a day or two...not weeks.

(C) Communication is a two-way street. If the JA doesn't get timely responses back from judges, board members, trainees etc then I don't see why the JA should be held accountable for that delay.

If we are making the JA accountable for timely communication, then the same rules should be set out and apply to the EO, judges, Board members, trainees and potential trainees.

Lastly, like almost every role in TICA, this is a volunteer position carried out in what "spare time" exists from work, family and other commitments. I think that always expecting responses "within a day or two" is a bit extreme.

(D) Fine with me.

Amend Judging Program 42.2.5 (Ring Clerking Requirements) - Stadter

Rationale:

There are plenty of experienced and qualified head Ring Clerks and Master Clerks who should not be required to start from zero because their experience was not based on the respective programs at the time they started gathering experience.

Amend 42.2.5

42.2.5 Provide sufficient documentation of experience as TICA Head Ring Clerk and TICA Master Clerk. E.g. Be a licensed TICA Head Ring Clerk and a licensed TICA Master Clerk.

~~42.2.5.1 Must have served as a Head Ring Clerk in at least ten TICA shows.~~

~~42.2.5.2 Must have served as Master Clerk in at least five TICA shows.~~

Rules Committee Comments:

(A) Playing devil's advocate...what constitutes sufficient? One time is not but a million is over kill. What we have to remember is each day of a show is one day, so if it says served as head ring clerk 10 times, that's really only 5 shows if you clerk back to back.

If one is planning on being a judge, master clerking is the best way to learn colors, divisions, etc. along with entry clerking.

(B) This is my question as well – if there are no specific requirements included, how does one determine what is sufficient? It leaves these rules open to interpretation, which IMHO renders them ineffective.

(C) I agree with (A).

(D) The proposal is too subjective as written. The Board needs to discuss the trainee entry requirements and then direct Rules if an amendment is required.

Amend Judging Program 42.2.6 (Entry Clerking Requirements) - Stadter

Rationale:

There are plenty of experienced and qualified entry clerks who should not be required to start from zero because their experience was not based on the respective program at the time they started gathering experience.

Amend 42.2.6

42.2.6 **Provide sufficient documentation of experience as TICA Entry Clerk. E.g.** be a Licensed Entry Clerk. (See Entry Clerking Program for details.)

~~42.2.6.1 Have served two times as a TICA entry clerk. (Additional activity is encouraged.)~~

~~42.2.6.2 Have passed the Entry Clerk Exam~~

Rules Committee Comments:

(A) This is subjective about the level of experience. I think that retaining the original 42.2.6 and deleting 42.2.6.1 and 42.2.6.2 would be objective. A licensed Entry Clerk, by definition, must have passed the Entry Clerk Exam!

(B) I personally think the entry clerking requirement should be 2 shows minimum but additional experience is encouraged and the documentation is being listed in the catalogs under show personnel.

I don't believe that there should be an entry clerking exam or license. If you have entry clerked, the documentation is there and it should be two times minimum.

Side note...Judges are always asked, as well as clerks where things belong and how to transfer things. Entry clerking and ring clerking trained all of us judges for this. You cannot be a judge if you don't understand the mechanics, divisions and categories.

(C) What I understand is being removed is 2 entry clerking jobs and passing a test. I don't understand as doing 2 shows (especially with TOES) is not that big of a deal. Why is there an objection? Is it the Exam? Prior experience would certainly qualify towards 2 assignments I would think.

(D) I don't think there is much to be learned from it if you have clerked and master clerked enough to get licensed; you should have already learned the colors and divisions by then. I think some of the questions could be included in the master clerk exam and it would be enough. The TOES program takes a lot of the thinking out of entry clerking. Knowledge of colors and divisions are also testing in the applicant exam to some degree. To give an idea of the applicants knowledge level in that area.

Amend Standing Rules 109.1.1.1 (Annual Rotations) - Vlach

RATIONALE:

Outside of North America live right now 1/3 of the TICA-Membership, there are 5 RDs from EW, ES, EN, AA, SA plus one Associate Director for the "International Region" compared to 9 Regional Directors from North American Regions (i.e. 35%), but only every 10th year the Annual Convention and the Annual Awards show is supposed to be held outside of North America. While this made a lot of sense a couple of years ago TICA should adapt this rule due to the fact that the whole landscape of our cat-fancy has changed and that the Annuals also should be awarded proportionally. Both international Annuals have proven the high quality and competence of the clubs involved – and there are more countries which are ready to hold such an event – and to promote TICA in a very contested environment (I am talking about other associations).

Amend Standing Rule 109.1.1.1:

109.1.1.1 The rotation for the Annual Conventions shall be: ~~Mid Pacific – 2010, Mid Atlantic – 2011, Great Lakes – 2012, Northwest – 2013, Northeast – 2014, International – 2015, Southwest – 2016, South Central – 2017, Southeast – 2018.~~ **Southeast – 2018, Mid Pacific – 2019, International – 2020, Mid Atlantic - 2021, Great Lakes - 2022, Northwest -2023, International – 2024, Northwest -2025, Northeast – 2026, Southwest – 2027, International – 2028, South Central – 2029**

Rules Committee Comments:

(A) It does seem to be good to have it more than every 10 years.

(B) For different reasons I don't see EW, AA or SA ready for an Annual show. That limits as "International" ES and EN ... I would prefer not to include the term International for any specific year, ES and EN should be included in the rotation as any other North American region.

In 2006 EN and last year ES did excellent works with their Annual Shows and Banquets. These regions should be included the same way other regions are considered.

(C) I understand why quarantine would preclude say Japan and the current rules on (no) cats in cabin flying into the UK would make it challenging to put on an Annual in EW but I don't think we can exclude specific regions from the schedule.

The rules already provide a safeguard if no club from the relevant region(s) comes forward with a show proposal.

(D) TICA Annual hosted outside the US needs to be more often than the current rotation

(C) The term “International” could be confusing between the International Division and EW, EN, ES, AA and SA – it would be better to say “outside North America” instead.

Amend Show Rule 23.6.2.1, add 210.6.1 (Infectious/contagious cats) - Klamm

Rationale:

Currently, **ARTICLE THREE - Eligibility for Entry**, Show Rule 23.6 states, "The show committee, at its discretion, may refuse to accept any entry for the following reasons:

23.6.2 Show date is during 21-day prohibitive period.

23.6.2.1 Any cat or kitten from a house or cattery where there has been fungus or any infectious or contagious illness within 21 days prior to the opening date of the show is ineligible for entry and/or exhibition."

However, since exhibitors don't advertise that their cats have fungus or have had contagious illnesses, show committees RARELY know that an exhibitor has had any of the above-mentioned issues and it should not be the show committee's responsibility to monitor households or catteries. Exhibitors should be the ones that are responsible for the health of the cats they bring to shows.

Amend 23.6.2.1:

Any cat or kitten from a house or cattery where there has been fungus or any infectious or contagious illness within 21 days prior to the opening date of the show **or one that has been exposed during that time period** is ineligible for entry and/or exhibition."

Add New Rule: 210.6.1

Any cat or kitten from a house or cattery where there has been fungus or any infectious or contagious illness within 21 days prior to the opening date of the show or one that has been exposed during that time period, is ineligible for entry, exhibition or for sale.

Rules Committee Comments:

(A) The existing 23.6.2.1 is not about the committee's responsibility to monitor unhealthy cats but is in a section covering reasons why a show entry may be denied.

Secondly, Show Rules 23.1 and 25.4.2 already state that only healthy cats are permitted in the show hall.

I'm not sure what this proposal adds to the existing rules, nor why the addition to 23.6.2.1 has been requested.

(B) I know where this is coming from and it comes from a breeders' dispute and I'm pretty sure it was put in at a request of one of the breeders.

That being said, I still don't see the difference.

(C) How does anyone know if a cat has been exposed? There was just a show where some virus was airborne that was causing cats to throw up - anyone who attended that

show would have had exposure and therefore unable to attend shows for the next 3 weeks

(D) I agree with (C). Also how can exhibitors follow the 21 day rule if we don't know we were at a show where there was a problem?

(E) Okay, how would this work out in practice? How would any entry-clerk or show manager know that cats have been exposed to fungus etc. at a show? If one cat would have fungus which has been discovered at a show - are all cats banned for the next three weekends? How shall other clubs know this? Who would send the lists of the entered cats to all other clubs? What about the already paid entry-fees?

I really do not like rules which cannot be executed properly - and if you cannot execute it then we should not waste any thoughts on it...

(F) I tend to agree with (E). There is no point in having rules without enforcement structures.

(C) How about this: I'm campaigning a cat and know that I can't make it to the next big show - I say that my cat is sick and exposed everyone at that show - it blocks my competition from going to the next big show too.

(B) Unless someone is going to pay a vet to come to their house, examine every animal and sign something attesting to the fact that the animals are healthy, unhealthy or whatever, there is really no way to enforce this rule except for people being honest and ethical and doing the right thing.

Amend Show Rule 22.1.2.1 (Scheduling Shows) - Stadter

Rationale:

At a recent board meeting it was discussed under which circumstances a Regional Director is authorized to reject a show date applied for by a TICA affiliated club. The general consensus seems to be that it is clear that a Regional Director is only authorized to reject a show date if one of the scenarios outlined in Show Rule 22.1.2.1 (show within same region or within 500 miles) applies. However, the proposed change will make this even clearer.

Amend 22.1.2.1:

22.1.2 Show Dates. When a club desires a show date from the Regional Director, they may request that date in writing. After 30 days, there being no response from the Regional Director, the club may proceed with the show date, scheduling it through the Executive Office by providing the Executive Office with a copy of the written request.

22.1.2.1 The Regional Director may **only** deny a club a specific show date if there is a previously scheduled TICA show within 500 miles (805 kilometers) or in the same region on the requested weekend.

22.1.2.2 If there are multiple show requests for the same show weekend, shows may be held within 500 miles (805 kilometers) of each other only with both A and B below:

A. Written permission from the show managers, and

B. Written permission of the regional director or regional directors if the show requests are from multiple regions. The first club that requests a show date is authorized to have the show.

Rules Committee Comments:

(A) The proposal clarifies what has always been understood, but because of the current loose wording the original rule is capable of being potentially overruled by Bylaw 17.3.1. I believe that 17.3.1 was only ever intended as broad guidance on an RD's duties, with more specific detail (where required) in the Standing and Show Rules.

Delete Show Rules 23.6.5 (Prior Conduct) - Jones

RATIONALE:

I was asked by several people to submit this rule change. It has my name on it but TICA's Legal Counsel has reviewed it and agrees 100% that this needs to be done.

This rule is completely subjective and needs to be replaced by an objective standard. Potentially, the Board of Directors could have a very different view of "detrimental conduct" than the Club and the Club would be at risk for discipline. Rule 23.6.4 covers a situation in which a protest has been upheld by the Board of Directors and 23.6.2 and 23.6.3 provide other reasons for which an entry can be denied.

Delete 23.6.5:

23.6 The show committee, at its discretion, may refuse to accept any entry for the following reasons:

23.6.1 Maximum entries received.

23.6.2 Show date is during 21-day prohibitive period.

23.6.2.1 Any cat or kitten from a house or cattery where there has been fungus or any infectious or contagious illness within 21 days prior to the opening date of the show is ineligible for entry and/or exhibition.

23.6.3 Exhibitor's name is on club or TICA Temporary or Permanent Suspension List.

23.6.4 A formal protest alleging a violation of Show Rules and/or By-Laws has been lodged, and the protest has been upheld by the Board of Directors.

23.6.5 **Rule Deleted** ~~*Prior conduct of the entry and/or exhibitor is detrimental to the best interest of the association or the welfare of cats or the club and/or its show.*~~

23.6.6 The entry is prohibited by law.

23.6.7 The last entry day is past. The last entry day is the last day and time that entries are accepted, notwithstanding any advertised "closing date". The show committee shall accept entries in the order received, however, may give preference to entries accompanied by payment.

23.6.7.1 In the event that a show committee has declined any entry pursuant to 23.6.7, no further entries may be accepted for any reason whatsoever.

Rules Committee Comments:

(see next page)

(A) It says that “This rule is completely subjective and needs to be replaced by an objective standard.” I think a huge vacuum would be created to just remove that statement without the objective standard and it would cause other unforeseen consequences - I certainly think removing it and no replacement would be in error.

(B) I have to agree with (A). The proposed use of 23.6.4 and/or 23.6.3 as substitutes for this rule would not meet all the situations. The supplied rationale expresses a need for an objective standard and I do feel that the proposal should include one, not just delete the entire rule.

(C) I will tell you that this proposal was critiqued by Legal and when I suggested the same thing you have, she said if the rule was deleted, the other two after it cover it.

(B) I appreciate that is Legal Counsel's view. That is one view and I am sure that there are other equally valid perspectives that the Board must take into account when deciding how to act on the proposal. I disagree with Counsel's view - I don't think the following two rules do cover everything.

(Rules Chair Note: 2 committee members have commented on specific instances in 2 different regions where the rule is being abused from their own knowledge, but these comments are not included here).

Amend By-law 114.3.1 (Write-Ins) - Vlach

RATIONALE:

A person who runs for office should actively search it, file as a candidate and pay the dues. With the possibility to have a write-in-candidate there is a chance for scheming behind the candidates' backs possible. In order to have "clean" elections only candidates whose names are on the ballot should be eligible. In most democracies in the world – and TICA is an International Association – write-ins are not possible and ballots with other names are not valid. This would help the TICA voting process to become more transparent.

Amend By-law 114.3.1:

114.3.1 The election ballot shall contain a list of candidates. ~~The ballot for election of President, Vice President and Regional Directors shall also contain lines for write-in votes.~~ The provisions of ARTICLE THIRTEEN shall apply to election of officers. **Write-ins will not be processed or tallied.**

Rules Note: If this proposal passes, Standing Rule 1013.3.3 will need to be amended to remove write-ins from the template defined in that rule.

Rules Committee Comments:

(A) I can see a point in this - it should also apply to the breed committees - There are certain requirements needed for the offices and a dedication to be in these positions. I suggest that the following be added: Write-ins will not be processed (or some such language).

(B) I personally don't agree with this as in a democratic process write-ins are allowed.

(C) I agree with (B). TICA has a long tradition about write-ins votes and I think it gives the membership more opportunities to express its wishes.

(D) I disagree and feel write-ins are a waste of a vote. If you want to have someone on the ballot to vote for I think it would be wise to approach that person ahead of time and ask if they would consider running because you think they would be good in that position. If they are not interested, that is their choice and leave it at that. They can be flattered by your inquiry and you both can move on.

(E) [On B's comment] This may be true in the US, but that is effectively the ONLY country where write-ins are permitted for elections.

TICA is truly international and some overseas members may not understand the "write-in" concept - so they would be at a disadvantage compared to US-based members. Also, breed committee elections don't allow write-ins, so the election of officers is currently inconsistent.

I think it is a valid and reasonable proposal.

(B) The whole purpose of a write-in is if no one is running that people want, they can mount a campaign for someone they do want. Most of the time, write-ins are not going to win. It gives people an opportunity to voice an opinion without backlash.

TICA may be truly international but it is a democratic organization, member driven. If the members want to write in and have their votes counted they should be able to do so no matter what country they live in.

(E) I understand the point - my point is that if members outside the US don't understand the concept, then they could be disadvantaged because they don't realise that they could mount a campaign as you suggest. Write-ins are a very US-centric thing and the less US-centric our rules are the better they are in my opinion.

No election process is ever perfect and I'm sure we could all come up with examples for the pros and the cons of write-ins.

Amend By-law 114.3.2 (Voting Process) - Vlach

Rationale:

In the event that there are more than two candidates it is possible that the winner has sometimes less than 1/3 of the overall votes cast. In my opinion this is not good as finally the candidate has a huge majority against – and this will be very hard to overcome and is not a real good democratic legitimation. I think that it is better to have a run-off in those cases so that supporters of candidates which didn't make the cut can chose between the remaining candidates. As real-life example I can quote the last presidential elections in our country. None of the seven candidates reached an absolute majority, therefore there was a run-off and finally the second placed candidate of the first election day won as the majority of voters preferred him over the other candidate.

Amend By-law 114.3.2:

114.3.2. The candidate receiving ~~the highest number of votes~~ **an absolute majority of votes (meaning more than 50% of the votes cast)** shall be elected. ~~In the case of a tie, a run-off election shall be held.~~ **In the case none of the candidates reaches the absolute majority a run-off election between the candidates with the highest and second highest number of votes shall be held.**

Rules Committee Comments:

(A) I think the rule is fine the way it is. If we start getting into run-offs then we could be doing this forever and what if it's the same two people? I think it should be whoever has the most votes wins.

(B) I agree with (A) - the one who gets more votes should be enough to win. For the last President and Vice President election we had several candidates for President and Vice President and I don't think any one of them got the "absolute majority". The Vice President votes were all very close to each other. Are we going to a run-off election for any single election? It would create a very complex process.

I think the rule is fine the way it is.

(C) Why change something that isn't broken and complicate things.

(D) This doesn't address if there is a (2 or more person) tie at second place, which could potentially lead to additional runoffs. In the long run I believe this would put an undue burden on TICA having to process runoff polls, and would delay the otherwise timely process of elections, which is not fair to its members.

(E) I agree - there is an issue with the proposal as written. In a 3 way race, with candidates 2 and 3 getting equal votes and candidate 1 having less than 50% of the vote, we could have limitless run-offs until someone wins.

(F) As long as we are changing things in this area - we may want to consider removing 114.1.2 unless it serves some historical reference - "114.1.2 The President

and Vice-President elected in 2001 shall serve an additional year in order to make the transition in election years.”

Item	Description	Assigned to	Assist	Current Status
1	Refer proposal back to Rules and then Legal on 23.6.7.1 Transfer Traditional Entries to TICA show on opening day of show; Rules should look at 23.6.6 and 23.6.7.	Bourreau	Rules	W2017
3	Develop email notification for owner of the sire that a litter has been registered using that sire.	Larry Hart		S2016
9	TICA Executive Office will prepare an IT report every month and send to the Board.	EO	Jones

Rules Comments on Poljun Advancement – Experimental to Registration Only

The Rules Committee has reviewed this application for Advancement of the Poljun from Experimental to Registration Only status.

Rules Committee assumes that the EO will verify the registration and membership information within the applications, since Rules Committee has no access to TDS.

From a Rules perspective, the Poljun application meets the criteria set out in Registration Rules 33.3 for advancement.

There was comment that the breed might be classified incorrectly (“domestic x non-domestic source species hybrid” rather than “domestic hybrid”), but it was not felt to be a critical issue at this stage.

Rules Comments on Toybob Advancement – Experimental to Registration Only

The Rules Committee has reviewed two different applications for Advancement of the Toybob from Experimental to Registration Only status.

Rules Committee assumes that the EO will verify the registration and membership information within the applications, since Rules Committee has no access to TDS.

The first application is from Margo Hill and is a re-submission of the application submitted for the Annual 2016 meeting, with additional members listed and some further information. This has been informally referred to as the “Scyth Toybob” to distinguish it from the second application. The minutes of the Annual 2016 meeting record that the Board took no action on the original application.

The second application is from Mila Denny, claiming to be the true Toybob. This has informally been referred to as the “Toybob” by the Committee.

From a Rules perspective, the “Scyth Toybob” application meets the criteria set out in Registration Rules 33.3 for advancement.

From the same perspective, the “Toybob” application also meets the criteria with one exception. The application uses the Notice of Intent published by Margo Hill’s group (June/July 2016 edition of the Trend). The Committee feels that a separate notice should have been published, since Mila Denny and her colleagues are not associated with that group.

Rules Committee makes no determination on which group should be entitled to use the name Toybob, but clearly under TICA’s Rules only one of these applications can use that name.

Rules Comments on Toybob Advancement – Experimental to Registration Only

The Rules Committee has reviewed two different applications for Advancement of the Toybob from Experimental to Registration Only status.

Rules Committee assumes that the EO will verify the registration and membership information within the applications, since Rules Committee has no access to TDS.

The first application is from Margo Hill and is a re-submission of the application submitted for the Annual 2016 meeting, with additional members listed and some further information. This has been informally referred to as the “Scyth Toybob” to distinguish it from the second application. The minutes of the Annual 2016 meeting record that the Board took no action on the original application.

The second application is from Mila Denny, claiming to be the true Toybob. This has informally been referred to as the “Toybob” by the Committee.

From a Rules perspective, the “Scyth Toybob” application meets the criteria set out in Registration Rules 33.3 for advancement.

From the same perspective, the “Toybob” application also meets the criteria with one exception. The application uses the Notice of Intent published by Margo Hill’s group (June/July 2016 edition of the Trend). The Committee feels that a separate notice should have been published, since Mila Denny and her colleagues are not associated with that group.

Rules Committee makes no determination on which group should be entitled to use the name Toybob, but clearly under TICA’s Rules only one of these applications can use that name.

Dear Fate,

The Longhair Bengals have completed ALL requirements necessary for Advancement to Championship Status and respectfully request to be added to the Winter Meeting January 2017.

1. Advancement to Championship Status paperwork completed, submitted and returned from Rules and Genetic's committees.
2. APPROVED by Genetics Committee.
3. APPROVED by Rules Committee.
4. Poll of Bengal Breed Section completed with YES to Advancement response.
5. ALL fee's paid with accompanying DAR's received.
6. Announcement of Intent to Advance published in TICA Trend November 2015
7. ALL Registration Rules 33.9 have been complied with and completed.

The Longhair Poll was combined with the other three polls sent out by TICA. As such, we could not apply to be heard by the Board until Poll results were obtained. The poll dates were implemented by TICA and should not negatively affect being heard at the Winter Meeting.

The Longhair Bengal communities requests our application to be heard at the January 2017 Winter Meeting.

Sincerely,
Wendy Symmes
Helen Mitchell

Rules Committee – Comments on BG standard change (Winter 2017)

Rules Committee has reviewed and approved the proposed changes to the BG breed standard and these changes have been put forward in accordance with TICA's rules for the Advancement of a New Trait.

A ballot of the BG breed section has now completed, with the majority voting for the change in Standard.

There is no explicit rule covering this situation, which is to create a breed group comprising the Bengal (BG) and Bengal Longhair (BGL), and thus permit Bengal Longhairs to be shown in Championship. In Rules' opinion, as the breed section has approved the proposed changes to the standard, the Board should vote on a motion to:

- 1) Approve the new standard, with effect from 1 May 2017
- 2) Allow Bengal Longhairs to be shown in Championship with effect from 1 May 2017.

This would ensure that the impact of the new standard is made explicit and there is no potential for confusion about the Board's decision.

(This process is effectively the same as that for the MC/MCP Breed Group at the Winter 2015 meeting)

HIGHLANDER BREED GROUP (HG/HGS)

The Highlander Shorthair (HGS) and Highlander Longhair (HG) are medium to large muscular and athletic appearing cats. Distinguishing features are the straight to slightly convex forehead, wide nose bridge, blunt profile, and the loose relaxed curl to its wide based ears.

HEAD 40 points

Shape 6

Nose 4

Profile 3

BODY 40 points

Torso 10

Tail 10

Boning 8

Musculature 7

Legs/Feet 5

COAT/COLOR/PATTERN 20 points

Length 6

Texture 6

Pattern 4

Color 4

CATEGORY: All.

DIVISION: Solid, Tortie, Tabby, Silver/Smoke

COLORS: All.

PERMISSIBLE OUTCROSSES:

Domestic longhair/shorthair, not a member of a recognized breed.

HEAD:

Shape: Wide, inverted pear shaped head with substantial width to the muzzle.

Eyes: Medium to large sized, set far apart. Set on a slight bias. Slightly flattened or hooded oval in shape. Eye color is independent of coat color except in the pointed and mink category.

Ears: Medium to large in size, wide at the base, set as much on the top of the head as on the side, as erect as possible. Ears must be firm at the base, flexible at the tips. Loose relaxed curl of no more than 90°, allowing the tips of the ears to be visible in a frontal view. No preference given to the direction the ear tips point in. Ear furnishings and ear tufts are desired but not required. Kittens may have a greater degree of curl but not more than 90° by adulthood.

Muzzle: Full, wide, strong with a definite break. Prominent whisker pads should make the muzzle appear squared.

Chin: Strong and deep. Must align with the top of the jaw.

Profile: Rounded back skull, straight to slightly convex forehead, with a change of direction at the eye ridge, may have a slight concave curve to the nose. Nose, muzzle and chin form a blunt look in profile.

Nose: Wide with substantial nose leather.

BODY:

Torso: Medium to large in size with noticeable depth. Rectangular in shape. Straight back with hips higher than shoulders. Overall muscled, athletic appearance. Males are proportionally larger than females.

Legs: Medium in length, back legs longer than front.

Feet: Medium to large, rounded with large knuckles. Longhair (HD) must have toe tufts.

Tail: Short and thick. Bone length must be a minimum of one inch in adults with proportional length in kittens. Should not extend past the hock. Kinks and curls are allowed.

Boning: Moderately heavy and substantial.

Musculature: Well-muscled.

COAT/COLOR/PATTERN:

Length: (HGS) Short in length, laying loosely against the body. dense and resilient.

Length: (HG) Longhair up to 2½ inches falling smoothly to the sides, with shaggy belly hair that is longer than the rest of the coat.

Texture: There will be texture variations depending upon the color and coat length of the cat.

Pattern: Tabby: All tabby patterns are allowed

Pointed: Expression of the underlying tabby pattern is desirable.

OTHER:

Balance: All parts of the body in proportion.

Condition: Should reflect excellent health, good muscle tone.

Temperament: Must be unchallenging.

GENERAL DESCRIPTION: The Highlander is a muscular, athletic cat. Highlander cats come in both shorthair and longhair. Physical characteristics include a straight to slightly convex forehead and wide nose, with the nose and muzzle forming a blunt look in profile. The curled ear is seen in profile as a loose, relaxed curl. The ears are wide-based, and open and stand tall.

LOCKETS: Withhold all awards

ALLOWANCES: Tarnishing in silvers.

PENALIZE: Ears that are not open or wide based, ears too small or low set. Tail too long. Excessive dip in the nose.

DISQUALIFY: Ears not erect. Tail too short or docked. Full length tail.

The proposal of a standard of the Poljun

By Ewa Zgrabczyńska

General Description:

The elegant, graceful, muscular, well-balanced in body proportions cat. Medium to large size (males), with a sex dimorphism in size (females could be small). The overall appearance should bring to mind the wild ancestors of domestic cats: strong, nocturnal hunters. Never- overweighed, rather- slim, but significantly- strong and powerful. This cat is extremely intelligent, with the special expression of big predatory eyes- "an ancient wisdom".

Colours:

Tabby group. Brown ticked tabby- trout spotted- the most desired unique colour; brown black marbled and brown black spotted- accepted during a progress of this breed.

Permissible outcrosses:

During the development: marbled Bengal and brown ticked tabby Chausie allowed, but in future- none

Head:

Shape: medium in size, with long forehead, slightly triangular (specially- in females could be), shouldn't be too broad ("bengalish"; male head can be a little bit rounded); high, well-developed cheekbones, full muzzle and chins; whisker pads- strong.

Ears: medium to big, erect and tall, should be placed close on the top of head with a wide base;

Eyes: oval to almost round, medium to large, but never bugged; gold or yellow colours preferred, specially- be light green or with a blue tone; the general impression- full of intelligence and passion of life.

Chin: strong, full.

Nose: medium to large and wide, leather is full, muzzle- with full whisker pads.

Body:

Torso: long, elegant and muscular, medium to large, deep chest, but "slim" in appearance.

Legs: slightly longer in the back, medium boning, long feet, well-developed for speedy running and jumping.

Feet: medium-sized and round.

Tail: long to very long, often with the dark tip, medium thickness.

Musculature: athletic, but never a heavy-built, similar rather to "cheetah" than "jaguar".

Coat:

The most desired- unique in structure and colours, reminding the coat of the Roe deer.

Lenght: short to medium, dense.

Texture: a dense, softer short undercoat covered by harder hair.

Colours:

Brown ticked tabby trout spotted- a mouse gray colour next to skin with sandy-gray to reddish gold base coat, clearly seen- the agouti gene action, with darker tabby markings on the face, legs and tail; on the neck- one or more necklaces desired. A lighter colour should outline the eyes and muzzle (a contrast should be so striking as possible); a stomach should be flecked, speckled or spotted;

Brown black marbled- with a beige colour of the background; patterns could be grouped or chaotic; hair- the most desired are ticked, three-coloured; eye spectacles and stomach- like in a brown ticked tabby.

Black brown spotted- colours from grey to brown, darker spots or rosettes on the coat, legs could be spotted or striped, other features- like above.

Temperament: dynamic, but emotionally stable, never- aggressive; typical-“monkey behaviour” - a tendency to explore and to study/sniff everything. Extravert.

Allowances: black paws with pink overtones, “bull-eyes” in marbled, a lack of necklaces. Silky and smooth coat typical for Bengals.

Disqualify: a lack of patterning on the stomach, legs or head; tail too short; white lockets (but not- white hairs similar to grizzle coat in Chausie), very short legs and unbalanced body proportions, tufts on the tip, aggressive behaviour (could cry loudly during a stress, but never bite), different colours on the body.

Breeding Program

Poljun is a special hybrid of genes coming from domestic breeds (predominantly: Aby, Chausie, Egyptian mau, Pixie Bob and Bengal), and should look as far as possible from two main body types: Chausie and Bengal; Poljun, in the opposition to Chausie, doesn't get tufted ears or a short tail; it's forehead is rather long but not sloping; ears- taller than of both breeds mentioned above and optimal- set as right on the top as possible; the coat- longer and not silky or smooth, looking like the coat of the Roe deer, without glitter; head- not so rounded, and looking very wild- the general appearance is rather in the direction "cheetah" than "jaguar". The colors: the most desired patterning: brown ticked tabby with little trout spotting, probably- the most primitive coat for all small felids

Ticked tabby coat with trout spots in a short to medium coat length give a picture of this wild-looking cat, along with a very differentiated repertoire of sounds, characteristic that these cats use to talk. Its strong muscular but well-balanced body, with not so long and rectangular torso like typical for Chausie, but even- athletic, and long- legged adopted to high jumps with digitigrade movement and the great developed senses, that make possible fast reactions together with the friendly temperament and active/playful behavior: all the time it is exploring the furniture, collecting (stealing) money, cosmetics, medicaments, jewellery etc. The body development of this cat is reached after finishing the third year of life, when they weigh 4 (females)-8(males) kg.

The breeding programme will use the brown ticked tabbies-trout spotted and marbled cats to underline all features further. The expected result presented on picture with the cat called Halsiu

Martin Wood <woodycoon@gmail.com>

Toybob breed application for advancement - TICA meeting/ January 2017

Margo <margoh4@aol.com>

16 September 2016 at 00:15

To: Bobbie Tullo <bobbie.tullo@gmail.com>

Cc: Martin Wood <tica@woodycoon.com>, Leslie Bowers <lbowers@tica.org>, Fate Mays <lmays@stx.rr.com>

We have included the breeding program and updated the application with new TICA members that support of what we applied for.

We are going to work on any compromise we can get from the overall consensus of the majority of the breeders.

All Russian breeders that supported the application are joining TICA and transferring their Toybobs pedigrees in the next two months and are going to register they catteries and show cats with TICA going forward.

We are also finishing the collection of DNA samples so I'm hoping to have more genetic background to provide to the board accordingly as they become available.

The major set back regrading the color limitation was that many of the cats that originated from Rostov area that were seal point only had or still have certain health issues that we need to verify yet by the genetic experts. As it can be related to the specify coat or lines or perhaps high inbreeding. We just don't know and and therefore we can't make an assumption neither limit the genetic pool at this stage.

The gene mutation is proven to be passed dominantly from generation to generation on all colors and it's not attached to specific coat pattern we know that from breeding experience alone.

We just don't have all the research in hand to pass on and when available we will hand them accordingly.

Bobbie and Fate,

Would it be possible to get an appointed liaison to the board to help us with the process along the way?

Sincerely,
Margo Hill

Toybob breeding program

Many combined efforts were taken within many Russian and other internationally located breeders to work towards preservation of the Toybob breed. We are now working on adding more lines to the existing gene pool available from the foundation cats since early 2000s in the USA and more actively in Russia. With the collective efforts of breeders in Russia alone we were able to form 15 foundation lines so far for the Toybob breed while preserving the type and small size for the most unique characteristic of this breed.

In 2008 initial application was filled with TICA to register this breed in the experimental status and therefore start the initial work on this breed recognition in TICA.

All breeds crossing was first implemented as the outcross policy implemented by the first Toybob breed applicant – Mila Denny; and now we would like to update the policy to only allow outcrosses to Russian domestic cats. The outcross policy will be focused on cats with similarities to the Toybob type, size and temperament to preserve the unique features of the cats while also preserving the health hardiness typical to the native domestic cats in Russia.

This policy will also be requested in all other cat fancy associations where Toybob is already approved for championship status.

Two major Russian cat fancy associations have already approved Toybob to compete for championship titles where all colors are already allowed in MFA (International Feline Association) and all color point divisions are allowed at ICU (International Cat Union) – please see below attachments: Letter from MFA and ICU organizations.

Breed report:

The average litter size for outcrosses and Toybob to Toybob litters are between 3-4 kittens while 3 most common. We see different size in the newborn babies from outcrossing while that does not effect or determines the actual size of the future adult cat. The weight of newborn babies is between 35-100 grams. The size of adult cats seen as the Toybob type are on average 2-5 lbs for females and 4-7 lbs for males. The offspring from outcrossing to achieve the small size and type for Toybob is achieved rather fast. We see kittens within F 1 generation exhibiting smaller size and also the kinkiness of tail shape in the first litters. We often see F2 generation to exhibit the Toybob type and build structure, where F3 generation corrects the type on average on the entire litter when bred to a Toybob type on both sides of the parents.

At the present time we have Toybob cats registered within the cat registries living beyond 10 years of age. There are many statements from some breeders that were involved with this breed since early 2000s that note that these cats get to live even over the mark of 20 years.

We also have not seen any major health concern so far while breeding Toybob to Toybob type cats and as the size is continuously remaining small as define in the breed standard for an adult to be no larger than a kitten of 3-4 months old of properly developed domestic cats.

Overall the small size and bobbed tail appearance does not limit those cats in any way to be very agile and active as cats can be. Our main goal in the breeding programs is

now continuously increase the appropriate genetic diversity while preserving the connection of these cats to their domestic origin.

We are also currently discussing the genetic background for this breed with Dr. Leslie Lyons at Missouri University and she is pursuing more in depth genetic studies on this breed. Results from the genetic research will be provided to the TICA board committee accordingly.

Weight at birth of kittens from 35 grams to 100 grams, while it does not affect the subsequent size of cats. Kittens with a weight of 100 grams to 6 months compared with kittens by weight with a weight of 35 grams. Pictured cat 1,5 month is its weight of 154 grams. It is very small (mini)

The first club that has engaged in the Toybob from the Ural region was a club registered with the WCF (World Cat Federation) "just a cat", the head of which to this day is a WCF expert Matyushina Irina. In 2009, the breed was drawn up a first draft standard was adopted to give the name of the Toybob. In 2014 it was decided to breed transcript Scyth Toybob (TBS- Shorthair)) and Scyth Toybob (TBL- Longhair), with such translation breed became registered in the IAF systems (KLK "Iris", St. Petersburg) and the ICU (the first club do the work UFC with this breed of " Belton", Ekaterinburg) under the leadership of Anna Gromova and Anastasia Nikolaeva. The Russian breeders have also decided and were approved to expend the breed color classes to all range of colors classes.

In 2014, a breeder Anna Gromova and team of associates requested the Toybob breed recognition in the largest Russian feline organizations. In May 2015, MFA (IFA) decided to approve Toybob status of a recognized breed with the possibility of adjusting the standard, and in October 2015 of the Toybobs got their first titles. Also, the recognition of the Toybob in the ICU system (International Cat Union) was held in November 2015 and since January 2016 the Toybobs has been receiving their first championship titles as well.

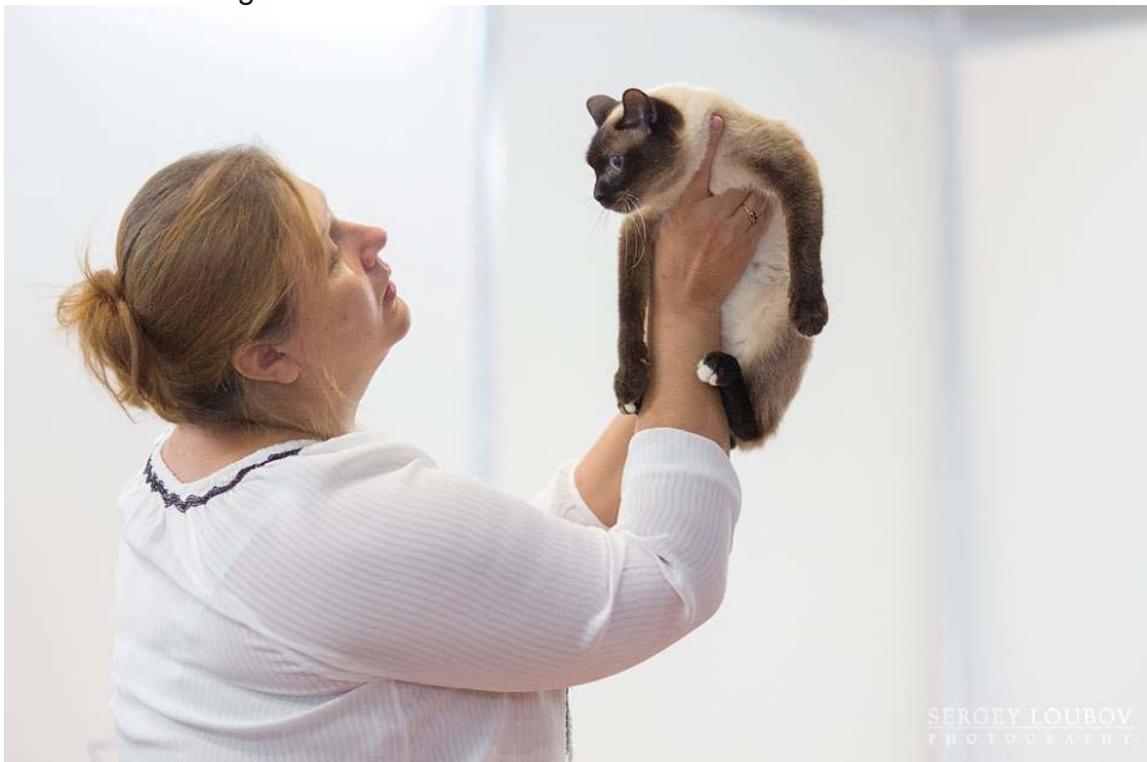

In the photo: 3-months kittens Kuril Bobtail and 7-9 months Toybobs, as they almost acquired its mature size (growth final formation occurs before 7-8 months).

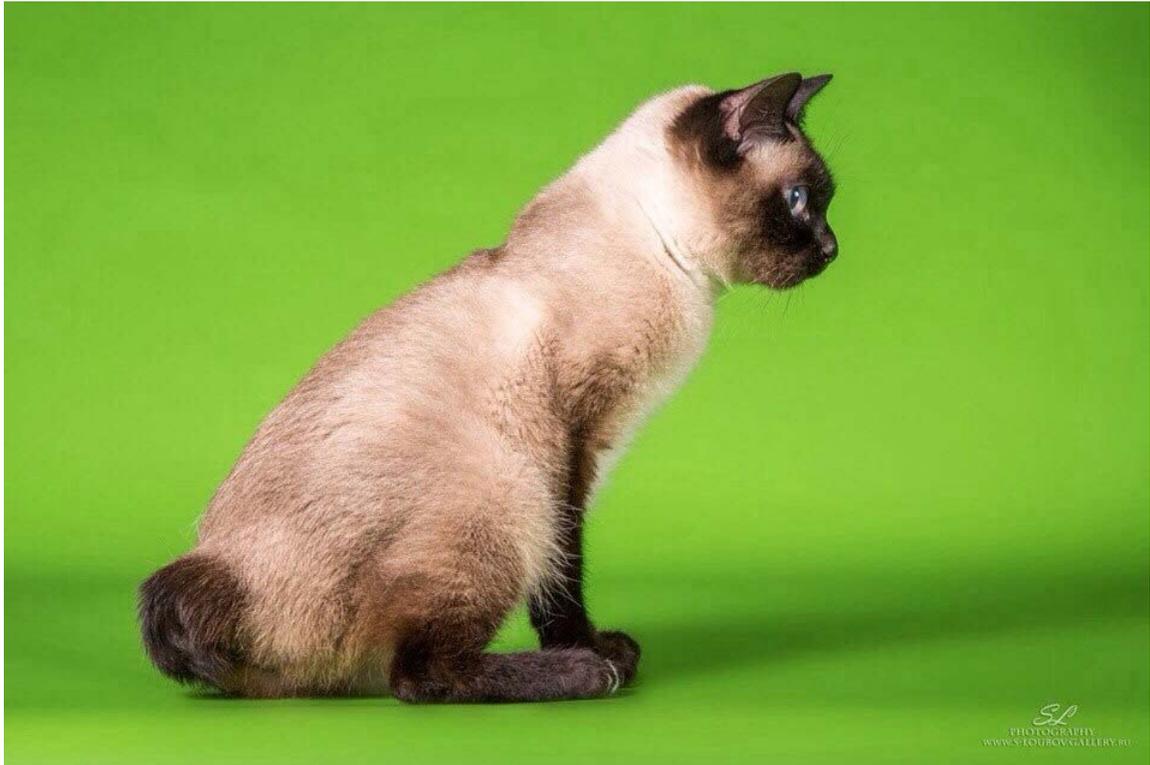

TOYBOB: small cat, no bigger than 3-4 month kitten normally developed a domestic cat, with short strong body, muscular, with a short bobbed tail, consisting of several kinked vertebras. Toybob cats characterized with very even temperament, affectionate and obedient to their human companions. Despite its small size, they are also very active, playful and agile.

Head: rounded when viewed from the front, in the form of a broad wedge with rounded lines. Cheeks low and rounded

Muzzle. Short, broad, with developed whisker pads. Profile with a slight stop is not below the lower eyelid. The nose is broad, of medium length, slightly widening to a large convex mirror. The forehead is flat enough. Developed brow. The chin is strong.

Ears: From small to medium in size, set high and straight, open forward, quite wide at the base (ear height greater than the width at the bottom).

Eyes: Large, oval, well opened, expressive, set slightly obliquely. Color in accordance with coat color.

Tail: It consists of at least 2 or more kinked vertebrae, twisted or bent and has an apparent length of 3-7 cm, movable.

Colors: All

Coat: dense, elastic, semi-adherent, well developed by spine. Overall hair soft, silky to the touch, on the back the hair is somewhat coarser than on the body, undercoat is poorly defined, feathering are also observed.

Disadvantages: Uncharacteristically too elegant long body, elongated tail, angular lines or a weak chin.

Disqualifications: avoid excessively small size, any features of dwarfism (bulging eyes, does not grow "fontanelles" brittle bones, an incomplete set of teeth or limbs bending).

Toybobs from Ural areas are not only bred throughout United States and Russia, but also in France (the first breeding pair was imported in 2014), in England and Denmark (2013), in 2015 the first breeding pair of the breed (Scyth) Toybob had been imported to Japan. In 2016 breeders in Austria and Sweden has welcomed Toybob breeding pairs to start their journey with the beautiful breed.

Toybob breed catteries throughout different countries:

Russia:

1. "Bel-Moor's" - Anna Gromova (TICA member)
2. "Small Cats" -Irina Syrchin (TICA member)

RECOGNIZED LETTER.

Hereby inform you that start with the Show Season 2016 ICU recognize a new breed in the Championship.

BREED NAME: Scyth Toy Bob

COAT: Shorthair

CATEGORY: Pointed

DIVISIONS: Solid Point, Tortie Point.

COLORS: All

All other variations (coat, category, division or color) exhibited in AOV show class.

December 12th, 2015
Moscow, Russia

Artem N. Savin,
Chairman of the ICU committee of judges and exhibitions.

A handwritten signature in blue ink, appearing to read 'Artem N. Savin', is written over the typed name and title.

Leslie Bowers, the TICA
Business Manager and
Executive Secretary

On the recognition of the breed Scyth-Toy-Bob the International Cat Association (MFA)

According to the letter I'm the President of the Russian Felinological Association IFA, confirmed that local native breed of Scyth-Toy-Bob with their homeland of origin Russia, Urals, Sverdlovsk oblast, Yekaterinburg is recognized in the system of MFA.

Standard of breed

Scyth-Toy-Bob – small cat, no bigger than a 3-4 month old kitten developed normal domestic cat, with short strong body, well -muscled, with a short tail, consisting of several deformed vertebrae. With a stable temperament. Sexual dimorphism is poorly pronounced, since males are not much larger than male cats. Despite its small size, those are viable, agile and cute cats.

Head. Rounded when viewed from the front, in the form of a broad wedge with rounded lines.

Cheekbones. Low and round cheekbones.

Muzzle. Short, wide with well-developed whisker pads.

Profile. With a slight stop is not below the level of the lower eyelid..

Nose. Wide nose of medium length that widens a little towards the nose leather.

Forehead. Rather flat, developed brow.

Chin. Strong.

Ears. Vary from small to medium size, set high up and straight; open towards the front, relatively wide in the bottom (the ears should be higher than its width of the base).

Eyes. Large, oval, wide open, very expressive, slightly obliquely set. The color of the eyes should resemble the color of the coat.

Tail. Consists of not less than 2 several deformed vertebrae, twisted or bent and has a visible length 3-7 cm, movable.

Type. Strong.

Body. Small, compact, muscular.

Chest. Rather deep, wide front.

Back. Straight.

Legs. Medium in length, strong and muscular with the size balanced proportionated to the body size.

Paws. Round.

Color. All colors.

Coat. Short hair, dense, elastic, half-adherent, beard hair is well-developed.

Semi Long Hair, the Coat is soft, silky to the touch, on the back of the hair is somewhat coarser than on the body, the undercoat is poorly expressed, and ornament hair is not recognized.

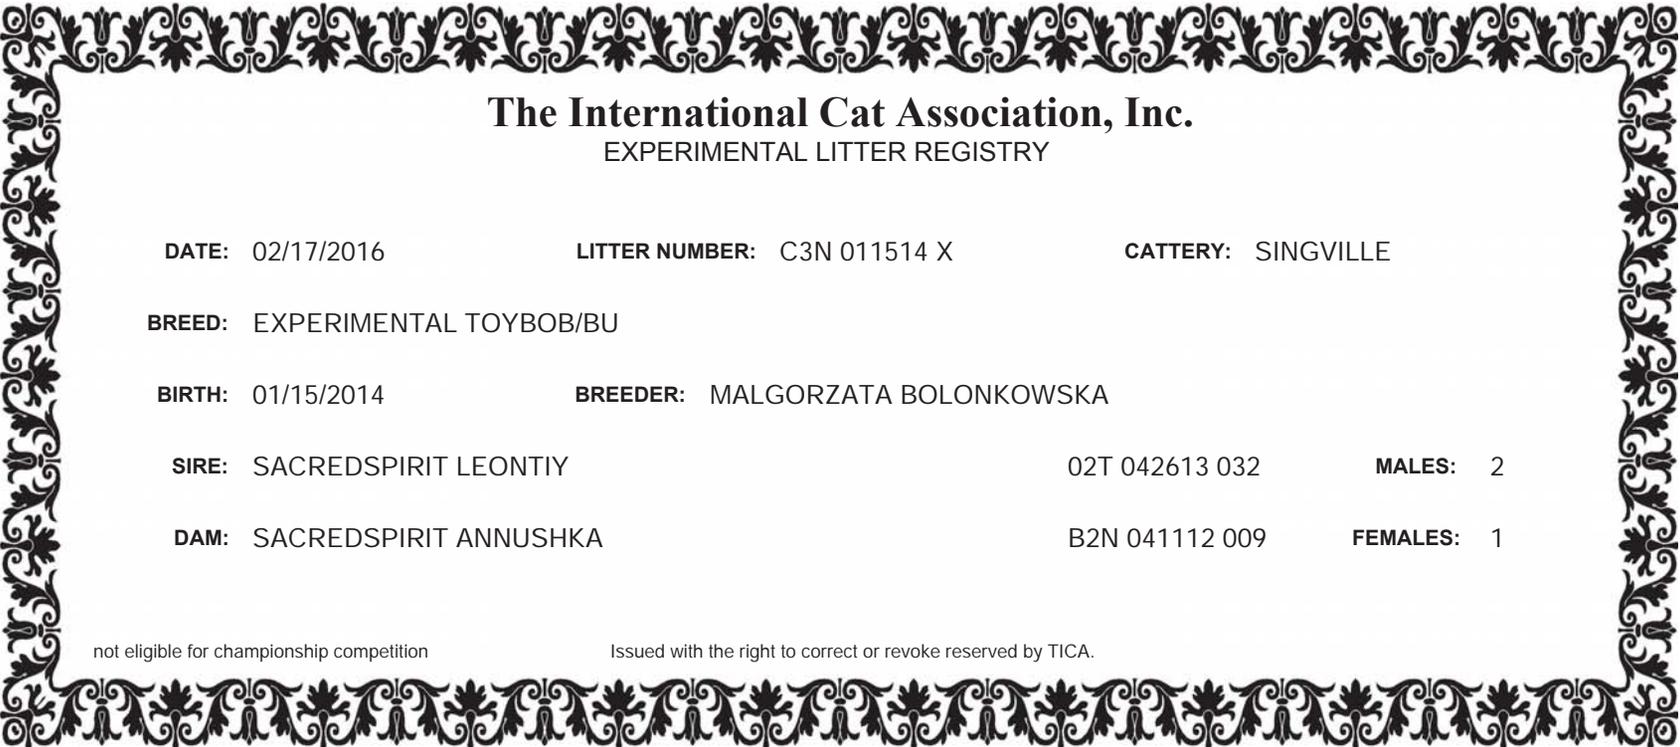

Disqualification. Penalize: Larger than typical size, excessively elegant long body, elongated tail, angular lines, weak chin.

Outcrossing. THA and HHP cats with a suitable phenotype, size and temperament.

Avoid overly small size bearing features of dwarfism (bulging eyes, not overgrown fontanel, bone fragility, incomplete set of teeth, contortion of the limbs).

The President of MFA
Expert «all breed» international category,
MFA, ICU, guest judge WCF, LOOF, GCCF
Shevchenko E. A.

Martin Wood <woodycoon@gmail.com>

Application for Advancement to Registration Only Category for Toybob Breed

Rick <riklyuda@ida.net>
To: tica@woodycoon.com

21 October 2016 at 04:16

Dear Martin Wood:

As required by TICA Registration Rule 33.3.4.5, I am submitting to you, a member of the Rules Committee, this electronic application for advancement of an experimental new breed to registration only new breed.

Because the application includes a large volume of information, we have saved it to a Google Drive and have made it available in full through the following link:

<https://drive.google.com/open?id=0B6PY220KMrthRWo4dG9OY0hGaU0>

The drive content is in five articles, consisting of 88 pages, as listed in the attached Registration Table of Contents.

There is currently an application pending with TICA for acceptance of a new breed of cat named the Toybob, in all colors and all divisions. In that application, the description of the breed, its history, and its standard are for another breed, not the Toybob. The application before TICA is for a breed known as Scyth or Scyth Toybob, which is currently being developed in the Ural region of Russia.

My cats were included in that application without my knowledge and agreement. Yes, I am a Toybob breeder, but my Toybob cats have a 28-year history and all have four and more generations of pedigrees tracing back to the first cat, Kutsiy.

I am objecting to their application in the hope of avoiding any conflict due to the similar names of the two breeds, and to provide TICA with the correct history, standard, and genetics related to the original Toybob.

The Toybob breed began in Rostov-on-Don as early as 1985. The first officially registered kitten was born in 1988. The breed has been recognized, with a standard similar to that submitted with this application, by four International and Russian feline organizations. There is also a preliminary standard in WCF, a member of WCC. The history of the breed in all of these feline registries recognizes the origin of the breed as native to Russia, with the first registered kitten being Kutsiy, who was born in 1988 in the city of Rostov. Development of the breed has always emphasized and continues to emphasize improvement of the phenotype in only one color – seal-point.

2017 Winter Meeting, 103

The Toybob has a unique look that differs markedly from Mekong bobtail and other breeds. Since the breed is natural, it can lose its unique phenotype by mixing with other breeds. Outcrossing with other breeds has been used in the past and the results were determined to be undesirable. Consequently, the prohibition of outcrossing with other breeds has been practiced for 5 years.

Included in the Google Drive link above, for consideration by the board in the winter session, is a presentation of the breed, details of the proposed standard and differences from other "similar" breeds.

Of special importance is the temperament of some lines of true Toybobs. Toybob cats are used to work with special-needs children, such as those with autism or paralysis, and with adults who have suffered strokes. A video of this work is available at <https://vimeo.com/185390916>.

In your consideration of the application for breed advancement at the winter meeting in Portland, it is important that the name Toybob be used only for the breed with a 28-year world history and a 12-year history in TICA. The application submitted with this letter is for that breed.

Thank you.

Mila Denny

SacredSpirit Cattery

Representing International Toybob Breeders

P.S. If unable to open the Google Drive presentation, please contact me. The file labeled "i_TB_presentation_for-board.pdf" includes the formal application.

“KUTS” CATTERY and TB CAT BREEDERS TEAM

Represent Cat's breed

Toybob.

<http://toy-bob.com/>

Agenda

1. The breed beginning and foundation cats.
2. Diminutiveness or nanism?
 - 2.1. Miniature animals in the wild and domestic world.
 - 2.2. Dog's diminutiveness and nanism.
 - 2.3. Veterinary researches of Toybob cats, studs, queens and offsprings from KUTS cattery.
 - 2.4. Conclusions about the health and the relevant conclusions for the breeding program.
3. Breed standard.
4. Extra: Recognition in other systems and Toybob in the media.

The founder of the breed: **Helen Krasnichenko**
The authors of the presentation: **Sofia Krasnoselskaya and Milla Denny**
Photo by **Julia Vakulenko and Svetlana Gladkova**

THE BEGINNING OF THE BREED

2

In 1983 Helen Krasnichenko, a Rostov-on-Don citizen, picked up on the street thin, sick and dirty cat. She brought him home to his mother 's horror, because she had already a lot of animals at home.

The cat was covered in wounds, some festered. They washed him off, began to heal, feed and cherish. They named him Mishka.

Mishka was look like old style siamese cat. He had severe character. But most importantly, he had not long tail with four kinks.

In January 1985, in the truest sense of the word, on the Elena mother's head fell a cat. That was color-pointed female cat with shorter tail in shape of pom-pom too.

That's how appeared the cat's family, that regularly was giving charming kittens to their owners. And they were dispensing them to all friends in Rostov-on-Don and its area in their turn.

THE BEGINNING OF THE BREED

3

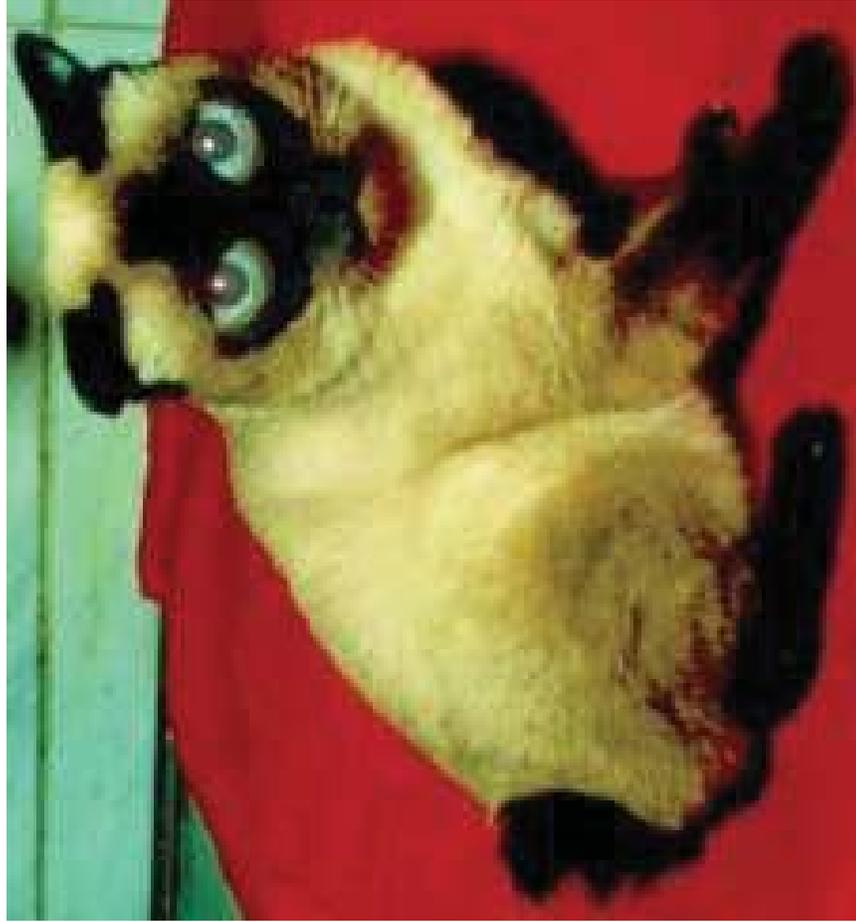

In 1988, in the ordinary litter was born very small kitten, twice smaller than its mates. Elena was having serious doubts with health of a kitten , whether he was full-term, will he survive or not.

He wasn't like the rest of kittens in this litter:

- ✓ very short tail in shape of pom-pom,
- ✓ very big eyes,
- ✓ he meowed rarely, often uttered sounds more like «arf»
- ✓ character more like a dog than a cat.

They named the kitten **KUTSYI** and the Helen's cattery – **KUTS**.

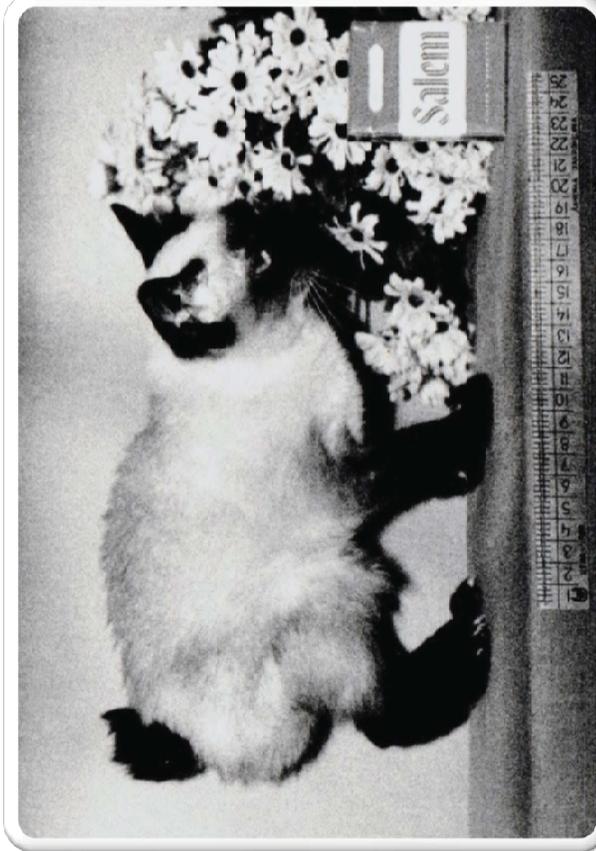

KUTSYI has become a very beautiful miniature cat and **founder of the breed**.

Kittens are born weighing 40-60 g

5

The first question that had to come up and arose
in front of responsible breeders:

health in main mutation trait

Diminutiveness or nanism?

6

Miniature animals = reduced in proportion (as a rule, the other species / breed in relation to their “large prototype”)

African pygmy hedgehog (*Atelerix frontalis*). Weight – 350-500 g, size – 4 times smaller than ordinary hedgehogs.

Pygmy marmoset (*Callithrix pygmaea Spix*) – is one of the smallest primates in the world. The average adult body weight is no more than 120 g, the body length - no more than 8 cm. A New World monkey family callitrichidae is native to the rainforest of South America, Brazil, Peru and Ecuador.

David Haring Photography

Fennec fox (*Vulpes zerda*) — is the smallest species of canid in the world. The fennec is only 18-22 cm in height at the withers, their body length is no more than 40 cm and their weight is between 0.8-1.5 kg. This small fox is found in the deserts of North Africa.

Miniature horses are not taller than 80-85 cm in height at the withers. The most famous miniature horses breeds are Falabella, American Miniature horse and Miniature Appaloosa.

Fat-tailed lemur (*Cheirogaleus medius*) are found in the dry forests of western Madagascar and south to the southern tip of Madagascar, where their range extends into moist evergreen forest habitats. Head and body length is 20 to 23 cm and tail length is 20 to 27 cm. Body weight varies between 120 and 270 grams, being heaviest just prior to entering seasonal torpor

Diminutiveness or nanism?

Miniature animals = reduced in proportion (as a rule, the other species / breed in relation to their “large prototype”)

7

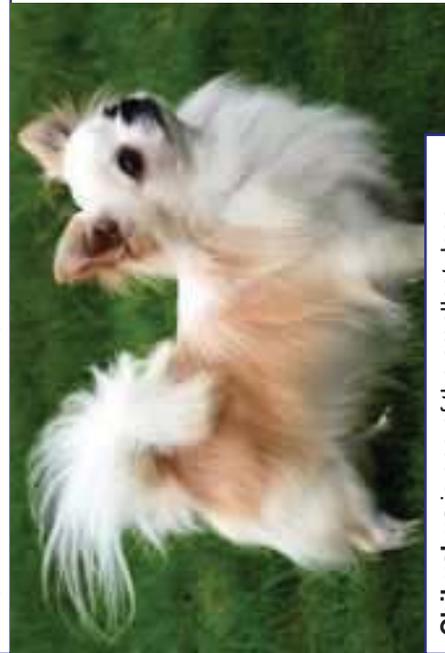

Djungarian hamster lives in Khakassia, in the steppe and semidesert zones of East Kazakhstan and Western Siberia. Adult gungarian reaches 10 cm with a body weight of approximately 45 g, it has a very short tail.

Miniature rabbits -
no researches on the true dwarfism.

Mini-piggy
Miniature piggies are up to 30cm in height. Weight is from 20 to 30kg.

Chihuahua is one of the smallest dogs.

The smallest bird is a **hummingbird**. It's native to Cuba. It's less than 2 g in weight and no more than 6 cm in body-length with beak. It feeds only on flower nectar.

Diminutiveness or nanism?

8

Miniature animals = reduced in proportion (as a rule, the other species / breed in relation to their “large prototype”)

Without any extreme, introduced by human!!!

Miniature dogs breeds are now **at the height of its popularity**. They are kind of **fashion accessory** or **expensive live toy**. Demand breeds supply. Therefore, in the pursuit of more exotic and fragile, irresponsible breeders produce not simply miniature but **dwarf pets**. It is not so simple to reduce the size and weight of healthy dogs. As a rule, puppies in all normal litters are born in the same size as their parents, or even slightly larger. In the pursuit of extremely low weight (**a weight of dwarf does not exceed 1 kg**) irresponsible breeders are doing so that larger and healthy dog mate with dwarf dog, despite the compatibility and possible hereditary diseases that lead to the early death of a pet.

The dwarfs have the following pathologies:

Signs of hydrocephalus: a large head compared to the body size.

Open fontanel remains open forever.

Umbilical Hernia in some cases takes the form of an open abdominal cavity.

Problems with joints.

Imperfect dental system: over- or undershot, the absence of incisors, missing the teeth enamel.

Thin coat due to thyroid dysfunction.

Hypoplasia of internal organs.

Typically **short lifespan**.

Very sad dwarf Chihuahua story
www.Facebook.com/gizmochi

NANISM IS MOST STUDIED IN HUMAN MEDICINE

9

Pituitary dwarfism is a disease that is manifested by retardation of growth and physical development due to dysfunctions in secretion of anterior pituitary hormone **Somatropin (HGH)** - **growth hormone. It is this hormone that is responsible for the process of cell division in human body.**

Nanism (Pituitary dwarfism). Nanism in Greek (nanos) means "dwarf". Synonyms: dwarfism, microsomnia, nanosomia.

The most common is panhypopituitarism, which has the **recessive inheritance**. There is a suggestion, that there are **two types of this diseases transmission - autosomal or by X-chromosome**

For **pituitary dwarfism** diagnostics it is important to study secretion of growth hormone (HGH) and other hormones.

Dwarfism is often accompanied by chronic diseases, when may arise:

- Direct damage of hepatic cells
- Abnormalities in the internal organs, e.g. reduce of bones mass, delay of differentiation, ossification of skeleton
- Hypoplasticity of the internal organs, weakness of the muscles and subcutaneous fat.

CONCERNING CATS BREED (SKIF) TOYBOB, KUTS CATTERY'S OFFSPRINGS

In compliance with indicated directions in the Center for Veterinary Medicine "Vetera" (Novomoskovsk):

1. were taken **biochemical blood tests** by six randomly selected (Skif) Toybob cats different ages from 4 months to 3.5 years.
2. were summarized **results of the observations during the period from 2000 to 2014 of 25 (Skif) Toybob cats.**

TOYBOB'S HEALTH IN MAIN MUTATION TRAIT

Diminutiveness BUT NOT nanism

кошек породы Скифф-Той-Боб из производителей и потомков разных линий питомников «KUCS» - владелиц Красниченко Е. (г. Ростов-на-Дону) и «Ekelentai-Toy-Dob» - владелиц Лажевская Е. (г. Новомосковск), разного возраста - от 4 месяцев до 9 лет, в результате проведенных клинических исследований крови на гормоны, влияющими на рост и развитие организма животного, показатели составили:

Гормон	Ориентировочные пределы колебаний	
	показатели	Кошки
Общий тироксин (Т4) (нмоль/л)	45	15-60
Свободный Т4 (пмоль/л)*	32	10-45
Общий трийодтиронин (Т3) (нмоль/л)	1,5	0,5-2,5
Кортизол (нмоль/л)	132	20-250
Соотношение кортизола в моче/креатинин	$<10 \times 10^{-6}$	$<10 \times 10^{-6}$
Адренокортикотропный гормон (АКТГ)* (пг/мл)	56	20-80
Паратгормон* (пг/мл)	17	3-25
Инсулин (мкМЕ/мл)*	6,5	5-20
Гормон роста (ГР)(мкг/л)	3,2	2-5
Инсулиноподобный фактор роста-1 (IGF-1) (нг/мл)	630	200-800

от нормы. Каким-либо отклонений в физическом
 состоянии, в т.ч. внешнем виде, репродуктивной функции, в
 развитии наблюдается половительная динамика. Они
 являются. Имеют адекватную массу и устойчивую нервную

Титров А.В.
 Главный врач

Chief Veterinary Officer of the Center for Veterinary Medicine "Vetera" (Novomoskovsk) informs all Breed Committees of all International Feline Organizations, that by random sampling of six (Skif) Toybob cats different ages from 4 months to 3.5 years as a result of clinical studies of blood on hormones that impact on growth and development of the animal figures are within the norms adopted for domestic cats.

TOYBOB'S HEALTH IN MAIN MUTATION TRAIT

в ходе регулярных профилактических осмотров с 2 лет
животных разного возраста в количестве 25 особей
черепных аномалий – не выявлено; а так же патоло
- опорно-двигательного аппарата – не выявлено;
- желудочно-кишечного тракта – не выявлено;
- мочеполовой системы – не выявлено;
- репродуктивной функции – не выявлено;
- дыхательной системы – не выявлено;
- заболеваний кожного покрова – не выявлено;
- заболеваний глаз – не выявлено.

Репродуктивная деятельность сохраняется до 12 лет. Половое развитие
кошек находится в пределах нормы, течки регулярные, их
продолжительность среднестатистическая для вида «кошка домашняя»,
количество котят в помете также соответствует среднему значению 2-4
(может быть 1 и может быть 5).

Выводы.

Кошки породы Скиф-Той-Боб из указанных питомников отличаются
хорошим здоровьем, высоким иммунитетом, гармонично сложены,
подвижны. Имеют адекватную психику и устойчивую нервную систему.
Котята рождаются жизнеспособными, без пороков развития. В дальнейшем
развитии присутствует положительная динамика в соответствии с
породными особенностями. Репродуктивная деятельность сохраняется до 12
лет. Длительность жизни составляет от 17 до 20 лет. Половое развитие кошек
находится в пределах нормы, течки регулярные, их продолжительность
среднестатистическая для вида «кошка домашняя», количество котят в
помете также соответствует среднему значению 2-4 (может быть 1 и может
быть 5).

The light reflex, reaction time, rate of aqueous secretion, vitreous, direct light reflex, drop of intraocular pressure (drop of IOP) – Normal, Vitreous detachment, haemorrhage, tumour, coloboma of the eyelid, coloboma of the lens, astigmatism – Not found

CONCLUSIONS ABOUT THE HEALTH AND THE TOYBOB'S BREEDING PROGRAM

13

1. The studied cats are healthy, do not suffer from any diseases related to their small size.
2. To avoid dwarfism it is allowed to mate only cats weighing more than 1.5 kg.
3. Mating with cats of other breeds is not recommended.
4. In order to avoid the pursuit of the most exotic and fragile Toybob cats, we recognize in this cats breed **only short coat variety and only seal-point colour**. It's permitted to use in breeding cats with some deviations in color but strictly by agreement with the Breed Advise.
5. The tail should not be short. Tail length should be more than 3 vertebrae and is shorter than 1/3 of the length up to the hock. The tail shape doesn't matter. The tail should be flexible.

Allowable outcross breeds **non**

GENERAL

15

Appearance: Cats of small size, short body with strong bone structure, broad chest and short neck. Well-muscled. Back is almost straight. Legs are rather strong. Short tail is kinked and curved. Only seal-point colour.

Size: small sized, adult's cats preferred weight is less than 2 kg. Males can be little larger than females.

HEAD.

16

Shape: Short trapezium shape with gently rounded contours.

Forehead: Rather full.

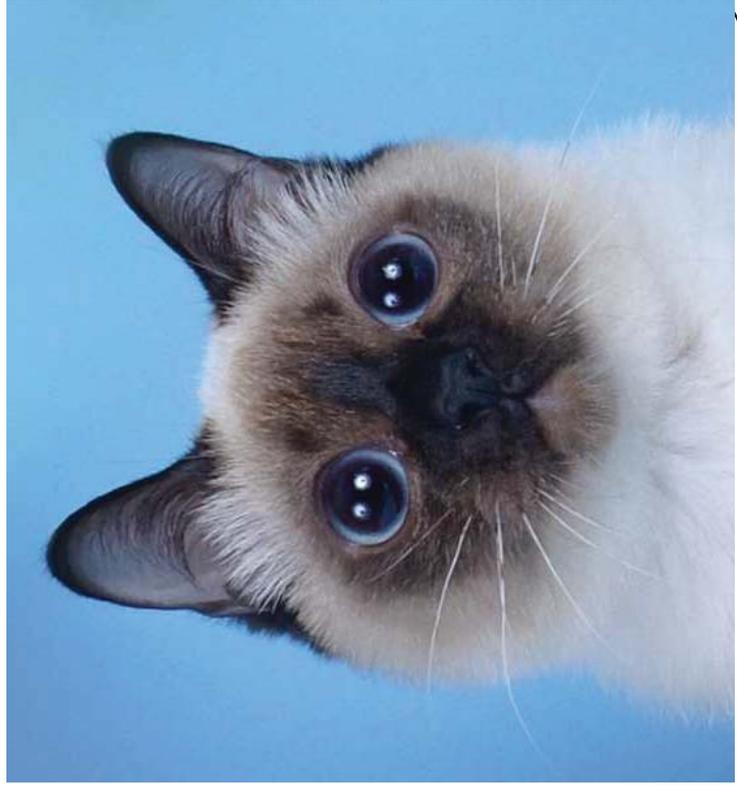

Profile: Distinctly curved profile with a dip from the forehead to the nose at the eye-middle level. Definite stop is not allowed.

Nose: Nose is medium in length. Bridge of the nose is straight or slightly curved.

Chin: strong

Cheekbones: medium, rounded, clearly defined.

Muzzle: short, rounded, without pinch.

EYES.

17

Shape: large, open wide, almost round, very expressive.

Colour: intense deep blue

EARS.

18

Shape: medium sized, with rounded tips.

Placement: High set. Slightly tilted forward. The distance between the ears is no more than one ear width.

Short and powerful.

NECK

BODY

Structure: squarish, smaller than medium size, compact, short, solid, muscular. Broad rib cage. The back is almost straight. Sexual dimorphism is not very pronounced

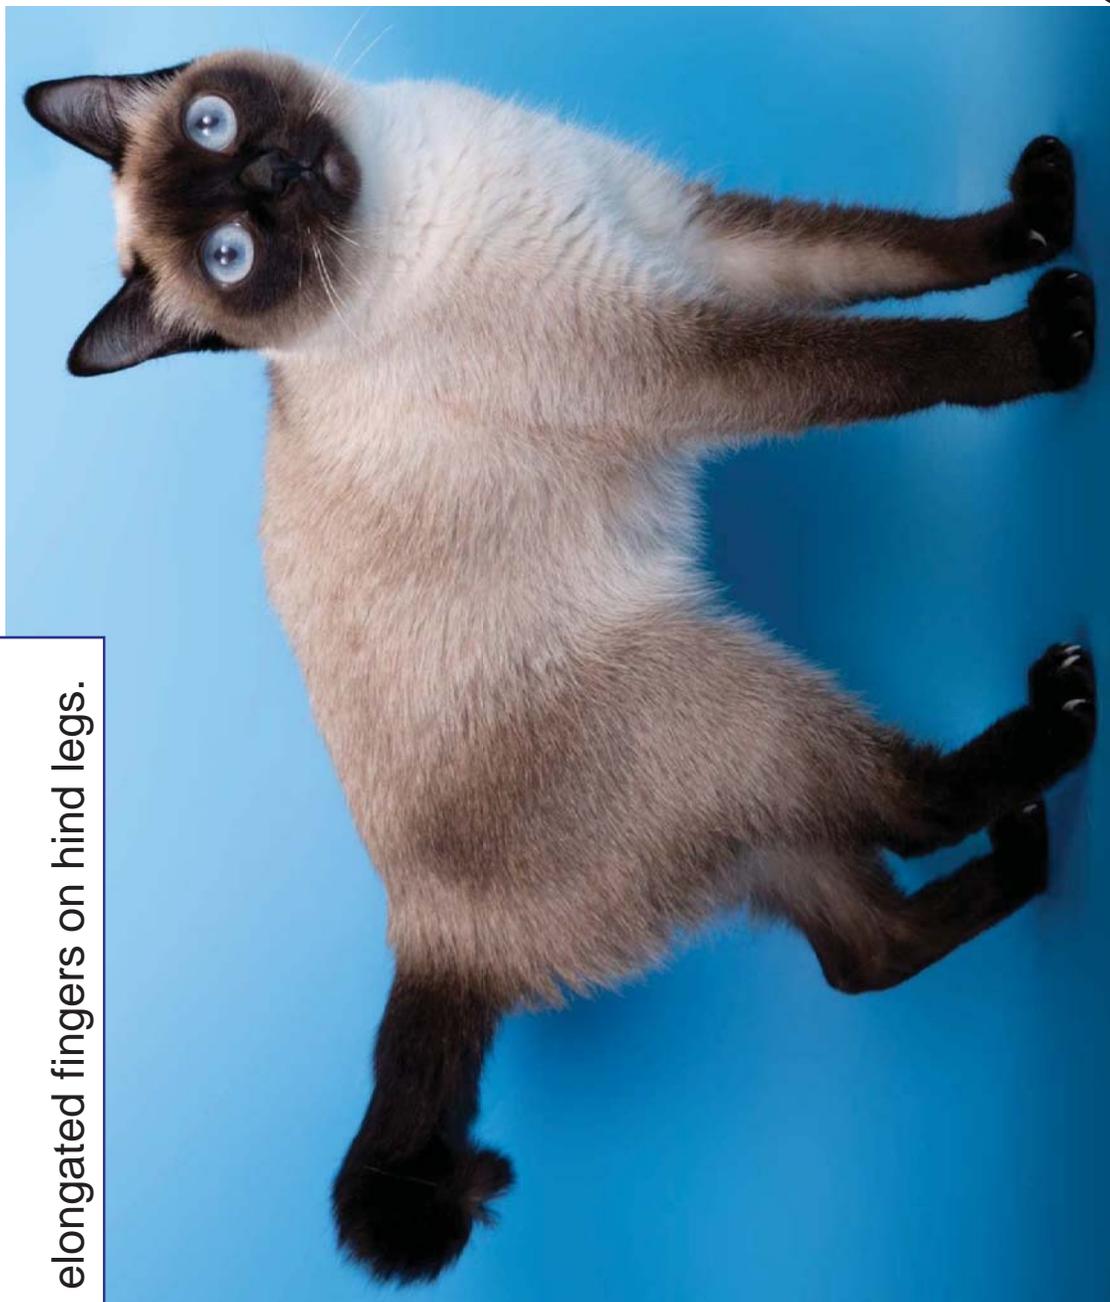

Broad rib cage

LEGS

Strong, medium in length, hind legs slightly longer than forelegs.

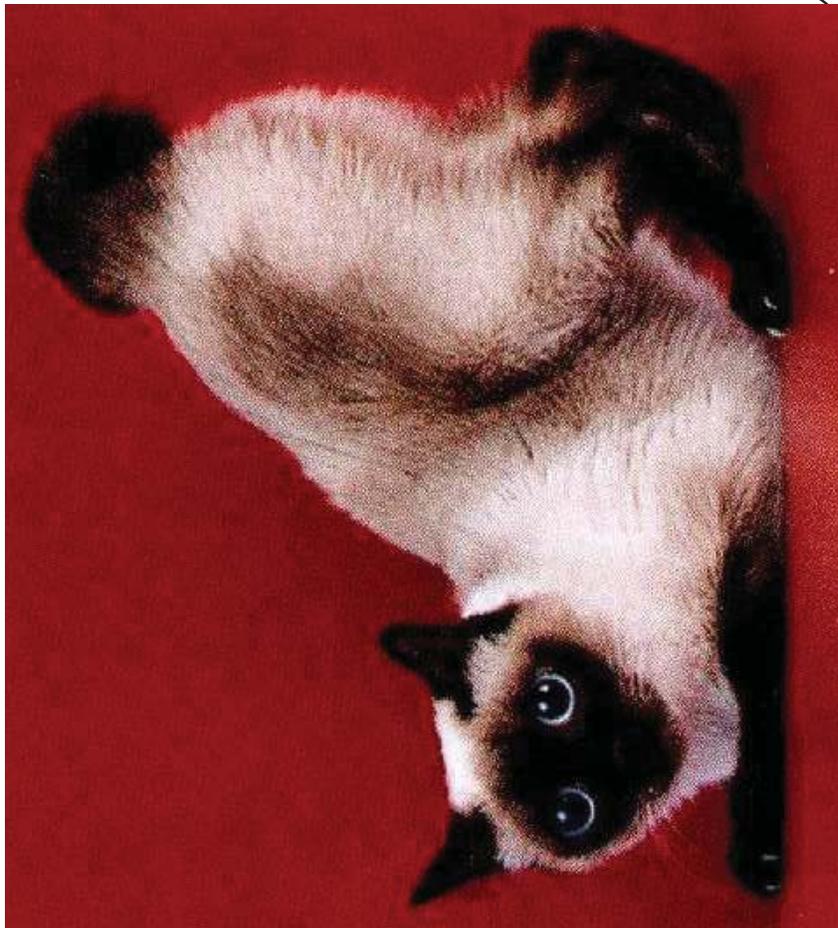

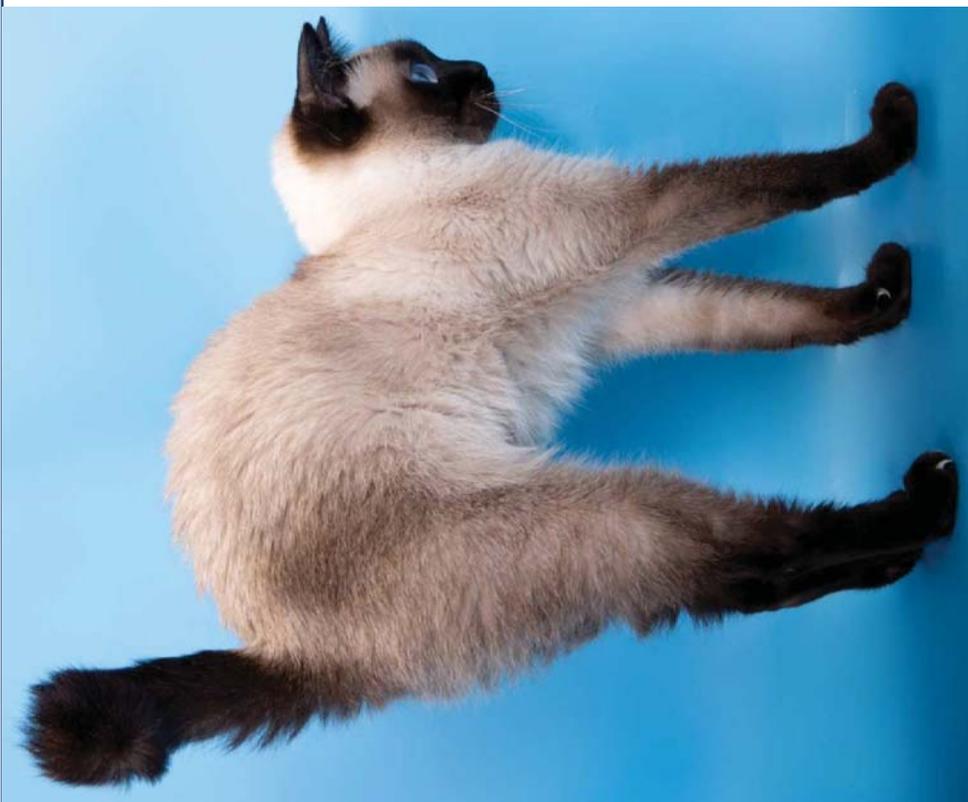

Paws: Rounded, with elongated fingers on hind legs.

TAIL

21

flexible, preferably is composed of several kinks and curves in any combination, but may be also almost straight. There are not less than 3 vertebrae. Visible length is not longer than $\frac{1}{3}$ of the body length.

COAT

22

Structure: short, dense, resilient, not close lying, with developed undercoat. The topcoat is slightly longer than the undercoat.

Colour: seal-point only. Evenness of the body color and contrast with the points are more important than whiteness.

Point Colour: dense and even. Mask, ears, feet and tail should match in seal.

COAT-COLOUR.NOTE

23

- It is permitted to award all certificates and titles (CAP-CAPIB..., etc./ Pr., IP, ...WPr.)
to neuters with small white spots on 1-2 fingers.

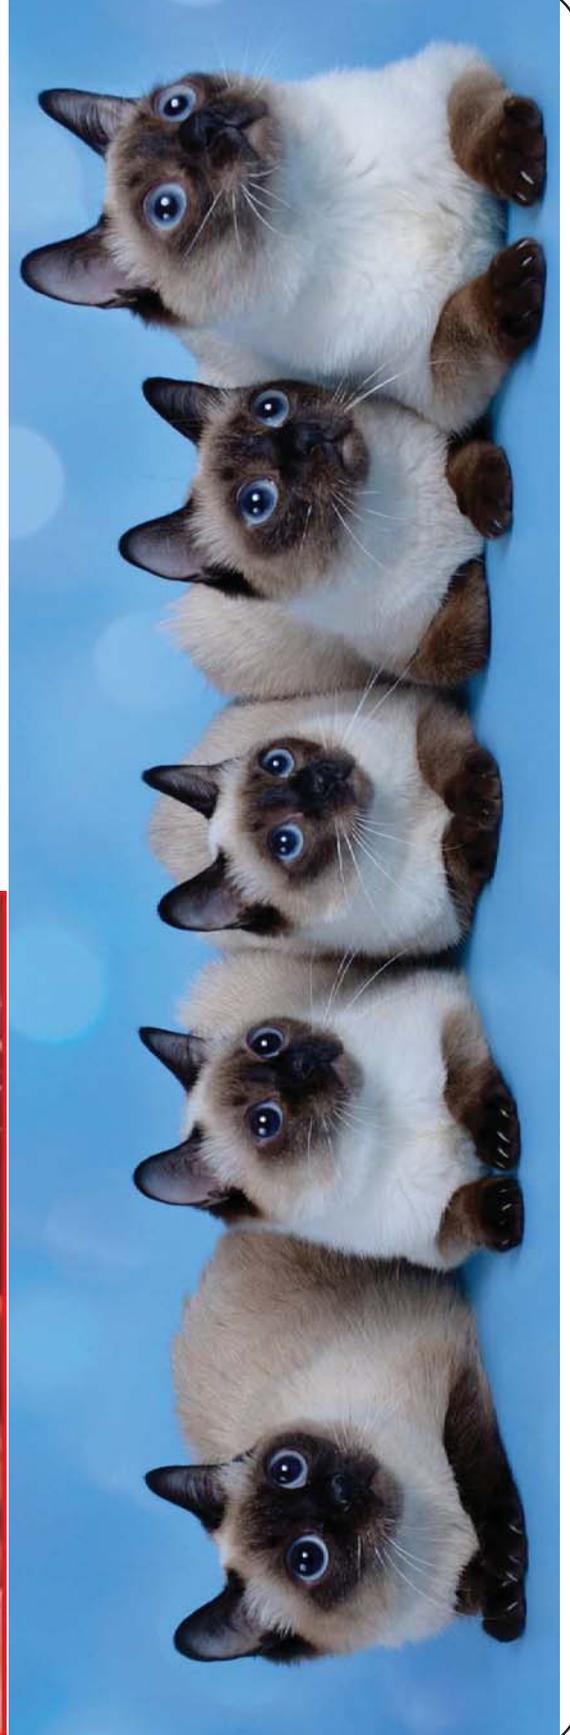

TEMPER

24

Active, sociable, curios, calm and even-tempered, like to communicate with people and other animals.
Note please, not for standards! Some of Toybob cats can work with “special” children, i.e. children with limited abilities - infantile cerebral paralysis, autism, developmental delay, etc., while communicating with little cats, show extraordinary results.

FAULTS

Head:
Wedge-shaped or narrow head
Weak chin
Pointed or elongated muzzle
Incorrect bite
Too slight dip in profile
Stop

Eyes:
almond shaped
any eye colour except blue

Ears:
big
pointed
wide set

Body:
not typical body size
too elegant or frail
elongated

Coat:
too silky coat
plushy coat

FAULTS PRECLUDING THE CERTIFICATE

Head:
Straight profile

Body:
any changes of type suggesting outcrosses
with other breeds

Tail:
longer than 1/3 of the body length
less than 2-3 vertebrae
absence of tail
inflexible tail

Coat:
any coat colour except seal-point
dark painted to the roots areas on the belly
or chest
white spots and lockets

DISQUALIFICATION - AGGRESSIVENESS
and other general disqualifying features

squint
long coat

The First Preliminary Breed Standard

In 1992 in Rostov-on-Don was founded Catclub **SKIF** (russian word for Scyth).

In 1993 the Catclub Skif organized a Cat show. The judge at the show was Irina Katser. She proposed the preliminary breed standard's project. The name of new breed had come up with "on the fly " .

SKIF – the Catclub in Rostov-on-Don,

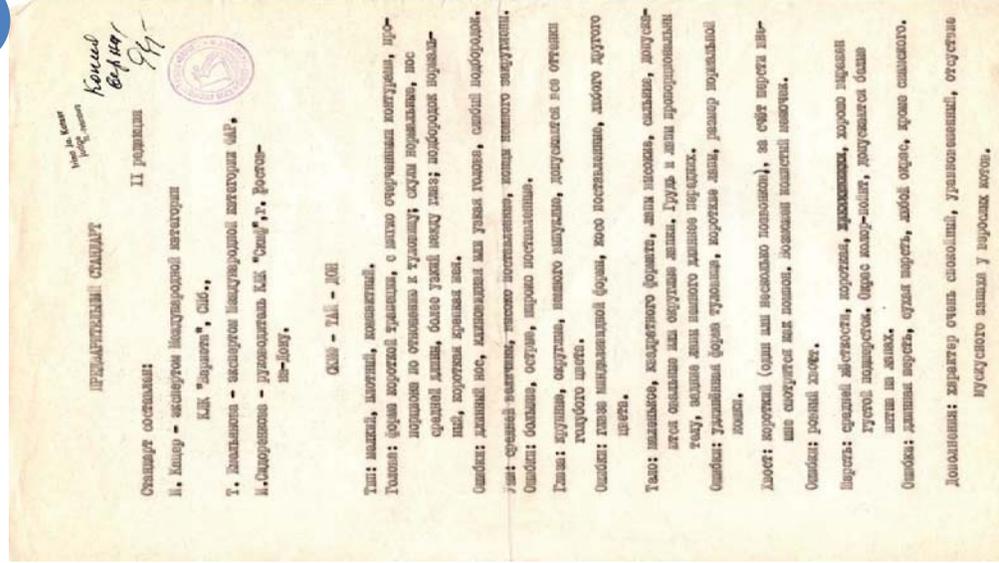

THAI – the Traditional (old style, applehead) Siamese, those were Kutcyi's parents,

DON – the river in Rostov-on-Don, the city, where the new breed was founded.

Later the name of breed **Skif-Thai-Don** was changed into **Skif-Toy Bob** and

in finished – into **Toy Bob**

The breed has found its fans already. It's recognized in several systems, eg FARUS, AFC and some others. The standart and the breed history were also presented in WCF-seminar. About the breed was written in the print media.

The first International WCF-show (November, 1993)

27

In November 1993 Skif-Thai-Don cats took part in the two-sistem's (WCF and FAR) International Cat Show.

WORLD CAT FEDERATION (WCF)

ФЕЛИНОЛОГИЧЕСКАЯ АССОЦИАЦИЯ РОССИИ (ФАР)

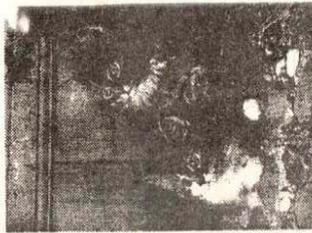

WCF-judge Dr. Olga Mironova suggested the breed name "Toybob" and the code– TOB

On 3-4 December 1994 in Moscow at the WCF-judges seminar Dr. Olga Mironova suggested the first preliminary-breed standard.

Skif Toy Bob's Recognition in AFC (February, 2015)

www.afclubs.ru

AFC

Association of Feline Clubs

Членство неограничено

Proof

Стандарт породы Скиф Той Боб (Skif Toy Bob)- STB

Общая характеристика: Небольшие кошки, меньше среднего размера, с коротким крепким телосложением, с широкой грудной клеткой и короткой шеей. Мускулатура отлично развита. Спина прямая. Конечности достаточно сильные. Короткий хвост с изломами и изгибами. Окрас только сил-пойнт. Обладают спокойным уравновешенным нравом. Несмотря на свой размер, жизнеспособные и очень подвижные. Предпочтительный вес взрослых кошек до 2 кг. Коты могут быть чуть крупнее.

afc.office@mail.ru

- Телосложение:** Квадратного формата, меньше средней длины, задние чуть выше передних. Лапки ярко выражены.
 - Голова:** Короткой трапеции с мягко округлыми, уплощенная площадка между ушами. Профиль с легким изгибом.
 - Глаза:** Большие округлые, линзовидные, очень выразительные.
 - Уши:** Среднего размера, широкие в основании с округлыми концами.
 - Хвост:** Короткий. Состоит из нескольких заломов и изгибов. (визуальная длина, а не по линиям изгибов).
 - Шерсть:** Короткая, плотная, упругая полуприлегающая. Окрас только сил-пойнт. Возможны белые пятна на лапах.
 - Недостатки:** Клиновидная или узкая голова, слабый поворот головы, нехарактерная величина, излишне эластичная кожа, окрас кроме сил-пойнта. Достаточно длинный хвост. Длинная шея.
- Скрещивание с другими породами не допускается.**

Стандарт Скифф-Той-Боб (STB)

Утвержден Международной Фелинологической ассоциацией FARUS 24.08.2014 года

Коты 4-месяца (отец Гоша Куц – мать Веста Эсселентай-Той-Доб). Фото: Елена Гайдукова

Мелкие кошки с коротким, крепким и плотным телосложением, широкой грудью и отлично развитой мускулатурой.

Короткий хвост с заломами, предпочтительно в виде маленького «помпона».

Несмотря на свою величину, жизнеспособные и очень подвижные животные.

Скифы обладают спокойным уравновешенным темпераментом.

ТЕЛОСЛОЖЕНИЕ: миниатюрное, компактное, плотное, с хорошо развитой мускулатурой. Фурцавая клетка достаточно широкая. Конечности сильные; средней длины. Лапы овальные.

ГОЛОВА: широкая, клиновидная, мордочка короткая. Профиль с плавным переходом ото лба к носу. Лоб непропорционально длинный. Нос средней длины, скулы округлые. Подбородок крепкий.

УШИ: средней величины, расставлены между ушами не менее ширины основания. Кончики ушей не должны быть острыми.

ГЛАЗА: большие, широко открытые, окружены выразительными. Окрас голубой, достаточно интенсивный.

ХВОСТ: короткий, с заломами (тип 2-3 позвонка), прямой или закрученный в виде «боба», подвижный. Видимая длина хвоста не должна превышать 1/3 длины туловища.

ШЕРСТЬ: короткая, плотная, полуприлегающая с достаточно выраженным подшерстком.

ОКРАС: однотонный. Возможны белые пятна на лапках, которые не подлежат дисквалификации, не являются нежелательными.

НЕДОСТАТКИ: чрезмерная длина головы, удлиненная мордочка, слабый подбородок, неправильный профиль, большие острые уши, излишне широкий постав ушей. Нехарактерная величина. Излишне хрупкое, вытянутое тело. Длинная шерсть.

Скращивание с другими породами: не допускается.

Питомник "КУЦ" Приглашает всех желающих заниматься разведением и продвижением российской породы "Скифф-Той-Боб"

руководитель питомника Кристина Елена Александровна - основательница породы

The Description of the Toybob cat breed

Toybob is a Russian native breed of small cats with short tails. In the mid-80s, the founder of the breed, Elena Krasnichenko, discovered on the streets of Rostov-on-Don first a male and then a female, both of Siamese color, small size and with short tails. From those parents was born, in 1988, a kitten that was even smaller than his parents and with a similarly short tail. Named Kutsiy, he became the progenitor of the breed.

The selective breeding of healthy small cats solidified certain characteristics of the breed, which have been passed from generation to generation. The name of the breed has changed a few times over the past 28 years. It began as Skif-Thai-Don, where “Skif” was the name of the first cat club to register Toybobs, “Thai” was based on similarity of the new breed to the other breed of that name and “Don” recognized the origin of the breed in the region near the river Rostov-on-Don. A later derivation of the name was Skif-Toy-Bob, where “Toy” was derived from the small size and “Bob” was derived from the short tail. This was later shortened to Toybob, its currently recognized name and the name under which most living cats of the breed are registered.

Presently, the following five feline registries recognize the breed, with similar standards:

- WCF – World Cat Federation (preliminary championship status, with allowance to competition for the first title)
- ASC – Alliance Super Cats
- WACC – World Association of Cat Clubs in Russia
- AFC – Association of Feline Clubs
- FARUS – International Felinology Association “RUS”

There are approximately 200 Toybob cats around the world, living in Russia, the USA, Japan, Israel and Belarus. The first Toybob cats to move to the USA did so in 2004. They were registered in TICA by Mila Denny, SacredSpirit Cattery, NW region.

Despite their small size, Toybob cats are very sturdy. The preferable weight of an adult female is less than 4.5 pounds. Males can be slightly larger. Females weighing less than 3.3 pounds are usually infertile. Newborn kittens can weigh as little as 1-2 ounces at birth, but will mature at the same rate as kittens of other breeds. However, their growth rate will be slower until they are fully developed at around 1.5 years of age.

Toybob cats are very energetic, outgoing and curious, with a consistently quiet, calm demeanor. They are very good with children and other pets. Toybobs are often used as therapy cats for special-needs children.

The shape of a Toybob head is a modified wedge, medium width with rounded contours. The forehead is full, not flat. In profile, the head is distinctly curved with a dip from the forehead to the nose at the eye-middle level, with no definite stop. The bridge of the nose is slightly curved. The cheekbones are medium, rounded, and clearly defined. The muzzle is short and rounded, without a pinch. The ears, medium-sized with rounded tips, are set medium broad and tilted slightly forward. The eyes give a very impressive look to this breed. When wide open, they are large and round. Set almost straight and wide apart, their color is an intense deep blue.

The body of a Toybob cat is short, but compact and muscular. The Toybob torso is square and smaller than medium size, but the chest is large. The neck is short and thick, leading into an almost straight back. The legs are strong, with the hind legs slightly longer than the forelegs. The feet are rounded, with elongated toes on the hind legs. The tail is flexible and shortened, usually composed

of several kinks and curves in any combination. However, the tail may also be straight. In any case, its length should be no less than 2 inches and no more than 1/3 of the body length.

The coat of a Toybob cat is short, dense, resilient and not close-lying, with a developed undercoat. The topcoat is almost the same length as the undercoat, although the coat on a kitten can be a little bit wooly. Toybobs are only seal-point in color. Any other colors indicate cross-breeding, which can have the additional effect of negatively changing the phenotype (e.g., by increasing body size, by decreasing the eye size and shape, by changing the coat texture).

It is possible to speak for hours about the disposition of a Toybob cat because they are absolutely different from most other breeds of cat. It even takes a great effort to call them cats at all. They are like small dogs in their devotion to people. As its name implies, this cat is much like a toy. Once you take a Toybob into your lap, it will lay there quietly until you are ready to move. They are remarkably trusting of people and are only slightly aggressive to cats with whom they are not yet familiar. On seeing its human, a small Toybob will run up, flop over on its back, and wait there patiently until you rub its belly or take it into your arms. They are very gentle!

Despite its small size, the Toybob is practically fearless. They do not fear fire and are difficult to startle. You will always see them with their eyes opened in photographs since they do not dread the flash. They also love to swim, and, if there is possibility to swim, will do it.

It is worth noting other “canine” peculiarities of these small cats. The Toybob can easily be taught to perform simple commands, such as retrieving an item. The sound made by a kitten most closely resembles a bark. Adults are relatively quiet, but will usually announce to their humans that they are in the room. Most Toybobs jump well and are not afraid of heights. Another peculiarity that I find interesting, is that Toybobs like to roll in a freshly cleaned litter box, just like dogs do in the sand on a beach. Toybobs will often relax with their tongues rolled and partially extended.

It is also worthy of note that the breed, because it originated in fairly severe climatic conditions, has an excellent immune system and is rarely ill. Potential breeders will want to know that the breeding male Toybob is completely free of musk. Neither males nor females are known to spray in order to mark their territory! And even more amazing is that adult breeding males can live together in the same room. Even more than that, they enjoy the company of other males, sharing meals, cuddling. Five or more intact Toybob males will live together like lovebirds. Introducing a female into the mix of males does not cause any problems. Toybob females are more dominant than males.

This breed was created for love, so the people should spend with them as much time, as possible. They don't like to be alone.

CATEGORY: Pointed.

DIVISION: Solid Point.

COLOR: Seal point ONLY.

PERMISSIBLE OUTCROSSES: None.

HEAD:

Shape: Modified wedge, medium width with rounded contours. Forehead is full, not flat.

Profile: Distinctly curved profile with a dip from the forehead to the nose at the eye-middle level. Definite stop is not allowed. Nose is medium in length. Bridge of the nose is slightly curved. Cheekbones are medium, rounded, clearly defined.

Muzzle: Short, rounded, without pinch.

Chin: Neither weak nor too prominent, aligned vertically with the nose.

Eyes: Wide open, large and round with a slightly surprised look, and set wide apart. Eye color is intense deep blue.

Ears: Medium sized, with rounded tips. Set is medium broad, slightly tilted forward. Ears not set less than an ear's width apart.

Neck: Short and thick.

BODY:

Torso: Smaller than medium, compact and short, square form. Rib cage is broad. The back

is almost straight. Sexual dimorphism is not very pronounced.

Legs: Strong, medium in length, hind legs slightly longer than forelegs.

Feet: Rounded, with elongated toes on hind legs.

Tail: Flexible, preferably composed of several kinks and curves in any combination, but may be also almost straight. Visible length is not less than 1 inch and not longer than 1/3 of the body length.

COAT/COLOR:

Texture: Dense, resilient, not close lying, with developed undercoat. The topcoat is almost the same length as the undercoat. Kitten can have a slightly wooly coat.

Length: Short.

Color: Seal-point only. Evenness of the body color and contrast with the points are more important than whiteness. The point color is dense and even. Mask, ears, feet and tail should match in seal.

GENERAL DESCRIPTION: Toybob is a Russian native breed of small cats with short tails. In the mid-80s, the founder of the breed, Elena Krasnichenko, discovered on the streets of Rostov-on-Don first a male and then a female, both of Siamese color, small size and with short tails. From those parents was born, in 1988, a kitten that was even smaller than his parents and with a similarly short tail. Named Kutsiy, he became the progenitor of the breed.

The selective breeding of healthy smaller cats solidified certain characteristics of the breed, which have been passed from generation to generation. The name of the breed has changed a few times over the past 28 years. It began as Skif-Thai-Don, where Skif was the name of the first cat club to register Toybobs, Thai was based on similarity of the new breed to the other breed of that name and Don recognized the origin of the breed in the region near the river Rostov-on-Don. A later derivation of the name was Skif-Toy-Bob, where Toy was derived from the small size and Bob was derived from the short tail. This was later shortened to Toybob, its currently recognized name and the name under which most living cats of the breed are registered.

Despite their small size, they are very sturdy. The preferable weight of an adult female is less than 4.5 pounds. Males can be slightly larger.

Females weighing less than 3.3 pounds are usually infertile. Newborn kittens can weigh as little as 1-2 ounces at birth, but will mature at the same rate as kittens of other breeds. However, their growth rate will be slower until they are fully developed at around 1.5 years of age.

Toybob cats are very energetic, outgoing and curious, with a consistently quiet, calm demeanor. They are very good with children and other pets. Toybobs are often used as therapy cats for special-needs children.

ALLOWANCE:

Incomplete point color and mask in kittens and young adults up to 12 months. Darker body shading in older cats as long as there is still a definite contrast between body and points.

PENALIZE:

Body: Any changes of type suggesting outcrosses with other breeds

Head: Straight profile

Eyes: Any color except blue

Coat: Long or semi-long, any coat color except seal-point, dark painted to the roots areas on the belly or chest

Tail: Inflexible

WITHHOLD ALL AWARDS (WW):

Color: White spots and lockets

Tail: Less than 1 inch, or more than 1/3 of the body length.

Temperament must be unchallenging; any sign of definite challenge shall disqualify. The cat may exhibit fear, seek to flee, or generally complain aloud but may not threaten to harm. In accordance with Show Rules, ARTICLE SIXTEEN, the following shall be considered mandatory disqualifications: a cat that bites (216.9), a cat showing evidence of intent to deceive (216.10), adult whole male cats not having two descended testicles (216.11), cats with all or part of the tail missing, except as authorized by a board approved standard (216.12.1), cats with more than five toes on each front foot and four toes on each back foot, unless proved the result of an injury or as authorized by a board approved standard (216.12.2), visible or invisible tail faults if Board approved standard requires disqualification (216.12.4), crossed eyes if Board approved standard requires disqualification (216.12.5), total blindness (216.12.6),

markedly smaller size, not in keeping with the breed (216.12.9), and depression of the sternum or unusually small diameter of the rib cage itself (216.12.11.1). See Show Rules, ARTICLE SIXTEEN for more comprehensive rules governing penalties and disqualifications.

Breeding Plan

1. Goals

- 1.1 Expand the gene pool with specific characteristics, such as (a) small size, with cobby body and almost straight back, (b) large, wide opened, round eyes, giving a “baby face” look, and (c) ears of medium size, without wide spacing.
- 1.2 Starting with 2nd and 3rd generations, and using a selective method, exclude from the breeding stock those cats with white spots (mittens) and with hair that is too long.
- 1.3 Maximize the uniqueness of the breed by excluding cats from the breeding program who resemble too much Mekong bobtail and other breeds of cats (preparation of breeding plans for specific lines is encouraged).
- 1.4 Emphasize breeding for the uniquely Toybob temperament; although it is not always easy to judge at shows.
- 1.5 Do **not** emphasize breeding for the shortest tail; tail length should just meet the standard.

2. Methods

- 2.1 Use cats in the breeding program that are descended from the original cat, Kutsiy.
- 2.2 Although Toybob cats typically have small litters (usually three or fewer), select kittens for breeding who will help to achieve the goals outlined above.
- 2.3 If both sire and dam are at least 3-generation purebred Toybob cats, close and semi-close inbreeding is allowed.
- 2.4 At the present time, in addition to those cats in the USA and Russia, there are small families of Toybob cats living in Belarus, Israel and Japan. Although those cats are not registered in TICA, the breeders are ready to work at increasing the gene pool through an exchange of kittens. There are now over 200 Toybob cats throughout the world. This can help breeders to avoid the consequences of excessive close inbreeding, while preserving the uniqueness of the breed.

3. Control

- 3.1 Those cats who produce tails that are too short should be excluded from breeding, in order to avoid Manx syndrome.
- 3.2 Very small cats, such as females weighing less than 3.3 pounds and males weighing less than 4 pounds, can be sterile and should be cautiously considered for breeding.
- 3.3 If a specific sire and dam produce in their litter kittens without impressive round eyes, a different pairing should be considered. However, the kittens should be at least 8 months old before making a decision about their parents. If different pairings still produce kittens with insufficiently round eyes, a decision should be made about whether or not to use those parents for future breeding. An adult cat without big impressive eyes should not be used for breeding, as he or she will not contribute to achievement of Goal 1.1.

FOR TICA PRESENTATION OF VETERINARY EXAMINATIONS OF TOYBOB CATS

This document contains evidence full health of Toybob cats.

1. Veterinary medicine center “VETERA” on the basis of **regular prophylactic examination of ToyBob cats since 2000 to 2014** provides a report over general clinical health of cats, their longevity and rather long fertile performance – *see page 2 in this file.*

2. Veterinary medicine center “VETERA” has examined six random chosen cats in the age from 4 month to 3,5 years. As a result of **a blood test considering hormones** that influence growth and development of the cat`s organism the following conclusions were made.

The received indexes correspond with physical standard for domestic cats. No defects in physical development, general health, inclusive appearance, reproductive function and mental life were detected. There is a positive dynamic in development. They are well-built, agile, have adequate mind and stable nervous system - *see pages 3-4 in this file.*

3. Veterinary medicine center “VETERA” of Novomoskovsk, Tulska region has conducted **ophthalmological examination** of 25 cats in the age from 4 months to 9 years from KUTS and EXCELLENT TOY Toy Bob. Veterinary clinic`s conclusions:

According to conducted examinations (see “Ophthalmological examination report” - appendix) TOY BOB cats have no ophthalmological problems - *see pages 5 and 6 in this file.*

4. Initiative group of TOY BOB breeders has provided the statistic information over 33 TOY BOB cats **considering visible size and shape of tails.** According to the statistic data the shortest tail is the tail of cat Gavr, which was X-Rayed. On the conclusion of doctor of veterinary clinic there were 3 visible parts of vertebrae with kinks or more.

Presented information provides an opportunity to come to a conclusion of **the absence of Manx gene domination.** – *see pages 7, 8 and 9 in this file*

1. Veterinary medicine center “VETERA” on the basis of **regular prophylactic examination of ToyBob cats since 2000 to 2014** provides a report over general clinical health of cats, their longevity and rather long fertile performance.

Veterinary medicine center “VETERA”

represented by physician in chief Titov Aleksandr Vasilyevich informs expert commissions of International Felinological associations of the fact that during observation over Skif-Toy-Bob cats, producers and descendants of different sides from nurseries “KUTC” (the owner – E.Krasnichenko, Rostov-on-Don) and “Exellentai-Toy-Don” (The owner – E.Lazhevskaya, Novomoskovsk)

in the course of regular preventive inspections of animals of different age in the number of 25 since 2000 to 2014 no skeletal or cranial abnormalities were detected; and pathologies of:

- locomotor apparatus – not detected;
- gastrointestinal system - not detected;
- genitourinary system - not detected;
- reproductive function - not detected;
- respiratory apparatus - not detected;
- integumentary system diseases - not detected;
- eyes diseases - not detected.

Reproductively active for up to 12 years. Reproductive growth is within the norm, regular estrus, the duration of which is statistically average for “domestic cat” type, quantity of kittens in litter also fits the average number of 2-4 (1 or 5 is possible).

Conclusion.

Cats of Skif-Toy-Bob cats from listed nurseries are marked with good health and immune system, well-balanced, agile. They have adequate mental life and stable nervous system. Kittens are born viable, with no development defects. There is a positive dynamic according to peculiarities of breed in the afterward development. Reproductively active for up to 12 years. Age of life is from 17 to 20 years. Reproductive growth is within the norm, regular estrus, the duration of which is statistically average for “domestic cat” type, quantity of kittens in litter also fits the average number of 2-4 (1 or 5 is possible).

Veterinary physician in chief

A.V.Titov

2. Veterinary medicine center "VETERA" has examined six random chosen cats in the age from 4 month to 3,5 years. As a result of a **blood test considering hormones** that influence growth and development of the cat's organism the following conclusions were made.

The received indexes correspond with physical standard for domestic cats. No defects in physical development, general health, inclusive appearance, reproductive function and mental life were detected. There is a positive dynamic in development. They are well-built, agile, have adequate mind and stable nervous system.

Center for Veterinary Medicine "Vetera" (Novomoskovsk) and Chief Veterinary Officer of the "Vetera" Center Alexander V. Titov informs all Breed Committees of all International Feline Organizations, that by random sampling of six Skif-Toy-Bob cats among breeding animals and offsprings from cattery KUTS different ages from 4 months to 3.5 years as a result of clinical studies of blood on hormones that impact on growth and development of the animal figures are:

Hormone		
	approximate limits	Cats
total thyroxin (T4) (nmol/l)	45	15-60
free thyroxine T4 (pmol/l)*	32	10-45
Total triiodothyronine (T3) (nmol/l)	1,5	0,5-2,5
Cortisol (nmol/l))	132	20-250
cortisol ratio in the urine / creatinine	$<10 \times 10^{-6}$	$<10 \times 10^{-6}$
adrenocorticotropic hormone (ACTH)* (PG/ml)	56	20-80
parathyroid hormone * (PG/ml)	17	3-25
insulin (μ U/m)*	6,5	5-20
growth hormone (μ g/l)	3,2	2-5
insulin like growth factor - 1 (IGF-1) (ng/ml)	630	200-800

These figures correspond to physiological norms adopted for domestic cats. Any abnormalities in physical development, general health, including appearance, reproductive function, in the psyche of cats were not revealed. There is a positive dynamic in the development. They are composed harmoniously, agile. They have adequate mentality and stable nervous system.

Veterinary medicine center «VETERA»

represented by physician in chief Titov Aleksandr Vasilyevich informs expert commissions of International Felinological associations of the fact that during ophthalmological examination of 25 TOY BOB cats – males and females at the age from 4 months to 9 years, recieved from producers and descendants of different sides from nurseries “KUTC” (the owner – E.Krasnichenko, Rostov-on-Don) and “Exellentai-Toy-Don” (the owner – E.Lazhevskaya, Novomoskovsk), as a result of clinical eye examinations over blindness it was concluded that:

- threat reaction - Normal
- maze test - Normal
- no disturbance in transparency of environments
- crystalline lens are transparent
- liquid of anterior chamber is transparent
- vitreous humor - Normal
- pupillary reflex - Normal
- direct pupillary reaction - Normal
- indirect pupillary reaction – Normal
- pupillary response to light of particular wavelength – blue - Normal, red - Normal
- ophthalmoscopy: no detachment, no hemorrhage, no tumor or coloboma.
- intraocular pressure - Normal

Eye diseases, such as chronic wide-angle glaucoma, congenital nistagmus, squint - not detected.

According to conducted examinations TOY BOB cats have no eye problems.

Veterinary physician in chief

A.V.Titov

25.01.2016

3a.Appendix. Ophthalmological examination report.

Appendix

The Protocol of ophthalmological testing

Assessment of visual functions from a distance

The symmetry of the eye slits - symmetrically
The presence of strabismus (crossed eyes) – absent
Blink reflex - positive
Lagophthalmos - absent
The reaction to the threat - positive (*note: if the animal is young, the response may be missing due to lack of skill*)
Test with a cotton ball - positive
Test for corneal sensitivity - positive
The maze test - positive
A schirmer test - Normal
Fluorescein - Normal

Evaluation of pupillary reflexes

Direct and consensual reaction of pupil to light – positive
reaction to light of a certain wavelength red / blue - available
Excretion - absent
Chemosis – absent

3th Eyelid - No protrusion, follicles are absent
Eyelids – entropion and ectropion are absent
Chalazion - absent
Tumor eyelids - are absent
Abnormalities of the eyelashes are not detected
Districhiasis/ectopic cilia are not detected
Cornea - the surface is smooth and shiny
Pigmentary keratitis is absent
Vascular - No
Opacity – is absent
Anterior chamber of the eye
Turbidity of aqueous humor – absent
Tumors and cysts of the iris are not found
Synechiae are not found
Vitreous body - Normal
Prolapse, syneresis, haemophthalmos – are absent
Lens – transparent
Position - Normal
The integrity of the capsule is not broken
Size - Normal
Cataract – absent
Fundus
Optic disc – Normal
Venules / arterioles – Normal
Tapetum – Normal
Retinal detachment - absent
Subretinal haemorrhage - absent

3. Decision of the breeders group

The shortest tail has the cat **GAVR Exellentai-Toy-Don**, owner Ekaterina Makeeva. The Group decided to do X-ray examination of this cat.

4. Results of the x-ray examination

4.1. The X-ray examination was on April 19, 2015 in the veterinary clinic BelAnto (Moscow). The X-ray image attached to this document.

4.2. The conclusion made by veterinarian of the Clinic Ivan I. Krishvalov is the following: on the X-ray image are 4 vertebrae and 1 kink composed of 3 parts (5-6 vertebrae) spliced to each other. The conclusion is signed by the Chief Veterinary Officer Paramonova O.V.

5. Conclusions

5.1. The number of vertebrae even in the shortest tail allows to make a conclusion about the absence of manx gene(s).

5.2. Shape and length of tail is not inherited.

5.3. Any shape and visible length of tail (excluding coat) 3 to 13 cm is allowed, it harmonize with the common appearance of the cat and don't hurts the cat and its offsprings health.

Initiative group of breeders signatures:

The Standard and Breed Commission`s conclusion of acceptance of Toy Bob Breed cats and Standards.

The commission which had received delegated powers of preliminary acceptance of Toy Bob breed on "Catsburg'2016" Exposition, consisting of:

Mrs. Tatjana Cernova (Latvia) - WCF 2nd Vice-president, the member of the Standard- and Judges Commission, WCF AB-judge

and

Mr. T. Eckhardt (France) - the member of the Standard- and Judges Commission, WCF LH, SLH, SOSH - judge,

On basis of granted documentation and expertise of **Toy Bob** cats came to the following conclusion.

1. Compete presentation and press coverage of the breed expose the breeder`s work thoroughly since 1998. The breed has particular features which are stable and with no genetic problems.
2. Having studied pedigrees provided by the breeders, The Commission reckons that livestock of those cats is increasing and provides different sides ascended to the father of the breed Kutsyi. As the breed has various names in WCF-clubs and other systems` pedigrees, such as Skif-Toy-Bob, Skif-Thai-bob, Toy Bob and different abbreviations of those - STB, TSB, TOB etc. it is recommended to reach a uniformity by taking Toy Bob name and TOB abbreviation for formalization of the breed in WCF-clubs. Previous pedigrees are not to correct but henceforth in pedigrees all the abbreviations of ancestors are ought to be changed into TOB.
3. Veterinary health examination suggests that cats of the breed and this breeding side are healthy.
4. Having studied the breed standard, all of the provided documentations and having estimated the similar livestock of Toy Bob cats exposed on the exhibition,

The Commission comes to a conclusion of successful acceptance of the breed standards and suggests accepting the breed Toy Bob conclusively inclusive participation in the championship.

Analysis of the provided presentation of the breed. The breed Commission's conclusion.

The commission which had received delegated powers of preliminary acceptance of Toy Bob breed on "Catsburg'2016" Exposition, consisting of:

Mrs. Tatjana Cernova (Latvia) - WCF 2nd Vice-president, the member of the Standard- and Judges Commission, WCF AB-jugde

and

Mr. T. Eckhardt (France) - the member of the Standard- and Judges Commission, WCF LH, SLH, SOSH - judge,

has studied provided presentation of **Toy Bob breed and concluded.**

The presentation is provided in 36 pages. Presentation sections are:

pages 1-4. About foundation,

page 5. Weighing of kittens.

pages 6-9. About miniature animals in nature. Diminutiveness of animal or nanism?

pages 10-14. Information about the Toy Bob health. Results of the many-years observation by Chief Veterinary Officer of the Center for Veterinary Medicine "Vetera".

page 15. Conclusions about the health and the Toy Bob's breeding program.

pages 16-25. Preliminary standard with pictures and comments.

pages 26-34. The history of the breed name – Toy Bob, recognition under other systems and Russian media about Toybob.

pages 35-36. Special thanks.

Along with the main part there is material about the breed history, its standard and comparison with other breeds from Russian magazines. There are, in particular three articles in full color Russian magazine "Koshki-Info", which are translated into English in full color performance. The following topics are discussed:

1. Breed history. Author – the leader of an initiative group of Toy Bob cats breeders, Elena Krasnichenko;
2. Standard of Toy Bob cats with complete description. Author – Ptesident of "SuperCats" Alliance, ASC expert, Sofya Krasnoselskaya;
3. Comparison of Toy Bob and Mekong Bobtail breeds. Author – WCF expert of 2nd category cats, Vera Chernyak.

The commission's conclusion.

Complete presentation and press coverage of the breed expose the breeder's work thoroughly since 1998. The breed has particular features which are stable and with no genetic problems.

The following conclusions of the presentation authors should be taken into account:

- Toy Bob breed representatives based on the offspring of the father of the breed Kutsiy are healthy, live 18 years or more;
- to preserve the genotype and phenotype of the breed within development, careful actions are required;
- mating with cats of other breeds can lead to misbalance as in genotype so in phenotype of the breed;
- to save the diminutiveness of the breed, its thorough health, large round deep blue eyes there should be no temptation to obtain various colors, different from seal-point; shape and lengths of tail is not important within the suggested breed standard.

Information over preliminary Toy Bob breed standard.

The commission which had received delegated powers of preliminary acceptance of Toy Bob breed on "Catsburg'2016" Exposition, consisting of

Mrs. Tatjana Cernova (Latvia) - WCF 2nd Vice-president, the member of the Standard- and Judges Commission, WCF AB-judge
and

Mr. T. Eckhardt (France) - the member of the Standard- and Judges Commission, WCF LH, SLH, SOSH-judge,

has studied provided description of the Toy Bob breed standard and came to the following conclusions.

The standard of Toy Bob breed gives a rather detailed description of all features of cats.

Commission's conclusions

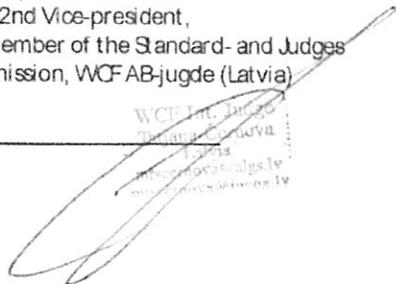

Toy Bob breed standard corresponds with standard composing requirements, includes general appearance, shape of head, eyes, placement and shape of ears, body and legs, quality and length of coat, color. Description of faults and defects, exceptions for sterilized animals having small color defects (white piebald) are included in the standard of the breed.

Commission's recommendations.

1. The commission recommends the initiative group of breeders to add a clause over the late phenotype development of the breed (up to the age of 1 year 2 months) to the breed standard.
2. The commission recommends the WCF-board to accept Toy Bob breed standard conclusively after introduction of an amendment according paragraph 1.

Review of provided pedigrees of Toy Bob cats.

The commission which had received delegated powers of preliminary acceptance of Toy Bob breed on "Catsburg'2016" Exposition, consisting of:

Mrs. Tatjana Cernova (Latvia) - WCF 2nd Vice-president, the member of the Standard- and Judges Commission, WCF AB-judge

and

Mr. T. Eckhardt (France) - the member of the Standard- and Judges Commission, WCF LH, SLH, SOSH - judge,

has studied the provided pedigrees of Toy Bob cats and came to the following conclusion

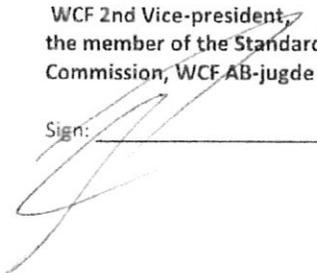

1. Provided pedigrees are pedigrees of animals born since 2007.
2. From 33 provided pedigrees:
 - 24 pedigrees are four-degreed, full and with no admixture of other breeds of cats;
 - 3 pedigrees demonstrate mating mixed with cats of following breeds:
Mekong Bobtail in the 3rd and 4th generations:
 - Elen' Kutc**, female, date of birth 21.11.2011
 - Lyubava of YarOmira**, female, date of birth, 25.10.2012
 - Stanisla of YarOmira**, female, date of birth, 10.07.2014
 - 2 pedigrees of littermates demonstrate mating mixed with cats of **Thai breed (unknown origins)** in the 3rd generation:
 - Vesta Exellentai-toi-don**, female, date of birth 02.02.2013
 - Viktoria Exellentai-toi-don**, female, date of birth 02.02.2013
 - 2 pedigrees are incomplete, three-degreed
 - Eva-Kuts**, female, date of birth 05.12.2007
 - Archibal-Kuts**, male, date of birth 18.05.2011

All cats of Toy Bob breed in the provided pedigrees ascend to the breed father Kutsyi and/or his direct descendants.

3. Various names in WCF-clubs and other systems' pedigrees, such as Skif-Toy-Bob, Skif-Thai-bob, Toy Bob and different abbreviations of those - STB, TSB, TOB etc. it is recommended to reach a uniformity by taking Toy Bob name and **TOB** abbreviation for formalization of the breed in WCF-clubs. Previous pedigrees are not to correct but henceforth in pedigrees all the abbreviations of ancestors are ought to be changed into TOB.

Breed Commission conclusions over provided health confirming documents of Toy Bob breed cats.

The commission which had received delegated powers of preliminary acceptance of Toy Bob breed on "Catsburg'2016" Exposition, consisting of:

Mrs. Tatjana Cernova (Latvia) - WCF 2nd Vice-president, the member of the Standard- and Judges Commission, WCF AB-jugde

and

Mr. T. Eckhardt (France) - the member of the Standard- and Judges Commission, WCF LH, SLH, SOSH - judge,

has observed and studied provided health confirming documents of Toy Bob breed cats and came to the following conclusion.

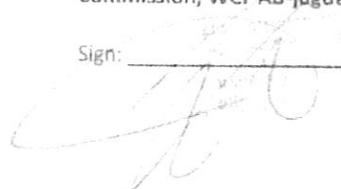

1. Veterinary medicine center "VETERA" on the basis of regular prophylactic examination of Skif-Toy-Bob cats since 2000 to 2014 provides a report over general clinical health of cats, their longevity and rather long fertile performance.
2. Veterinary medicine center "VETERA" has examined six random chosen cats in the age from 4 month to 3,5 years. As a result of a blood test considering hormones that influence growth and development of the cat's organism the following conclusions were made.
The received indexes correspond with physical standard for domestic cats. No defects in physical development, general health, inclusive appearance, reproductive function and mental life were detected. There is a positive dynamic in development. They are well-built, agile, have adequate mind and stable nervous system.
3. Veterinary medicine center "VETERA" of Novomoskovsk, Tuisk region has conducted ophthalmological examination of 25 cats in the age from 4 months to 9 years from KUTS and EXCELLENT TOY Toy Bob. Veterinary clinic's conclusions:
According to conducted examinations (see "Ophthalmological examination report" - appendix) TOY BOB cats have no ophthalmological problems.
4. Initiative group of TOY BOB breeders has provided the statistic information over 33 TOY BOB cats considering visible size and shape of tails. According to the statistic data the shortest tail is the tail of cat Gavr, which was X-Rayed. On the conclusion of doctor of veterinary clinic there were 3 visible parts of vertebrae with kinks or more. Presented information provides an opportunity to come to a conclusion of the absence of Manx gene domination.

Standard- and breed-Commission's conclusions.

Veterinary examination shows that mutations of the examined cats are harmless and gives an opportunity to fix them, providing correct breeding.

MINIATURE BREED IS GREAT AND HEALTHY!

THE BREED

Emergence of cats with different peculiarities is a standard phenomenon, the gift of nature. However to notice that feature, civilize it, to grow up several generations, to gather a group of like-minded people who would love such cats and who are ready to popularize them, increase the livestock, to reach the acceptance of cats' systems, is a very hard work of the breeder indeed. We know some breed examples who had arisen but then disappeared in oblivion. Toy-bobs were lucky as their "Mum" Elena Krasnichenko went through that difficult way from Mishka and Kutciy to the acceptance of the breed.

THE FIRST BREEDERS AND THE FIRST PEDIGREES

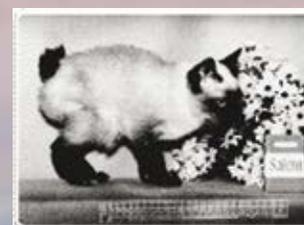

A quarter of century ago a cats` family arisen at Elena Krasnichenko`s and her mother`s home in Rostov-on Don. There was Mishka, who was a small cat with shortened and curved tail, and color-pointed cat Simka with shortened tail as well, but twisted as bagel.

When in 1988 in a regular litter a very small kitten appeared Elena had some hesitations about his health. As he was twice smaller his congeners she wondered if he was full-term and if he was going to survive. besides the size he differed from the others by his tiny tail in the shape of bob, huge eyes and even the character which was more doggy than catlike.

The baby was named Kutciy. He was rather small well timbered cat and became the father of the breed toy bobtails — Toy-bobs. the cats nursery of E.Krasnichenko has been called “KUTC” in his honor.

The work on cultivating the breed and raising the livestock started in 1988. Every careless step, each unbred mating could have led to culling the whole generation. For the felinological work you can easily apply the quote from the movie "The Irony of fate" (very popular film in Russia): "Within one night you

can easily destroy the old, but to build something new is extremely difficult".

The kids of small size, with a little surprised sight of blue eyes, mask at the muzzle and shortened tail stayed in breeding. The weight of newborn Toy-bobs is about 40-50 grams. As opposed to rising the kittens of other

breeds, rising up Toy-bobs requires much more attention.

The first matter taken up with breeders must be the health among different mutative features. There are three main breed features such as small size, shortened tail and Siamese color.

THE BREED

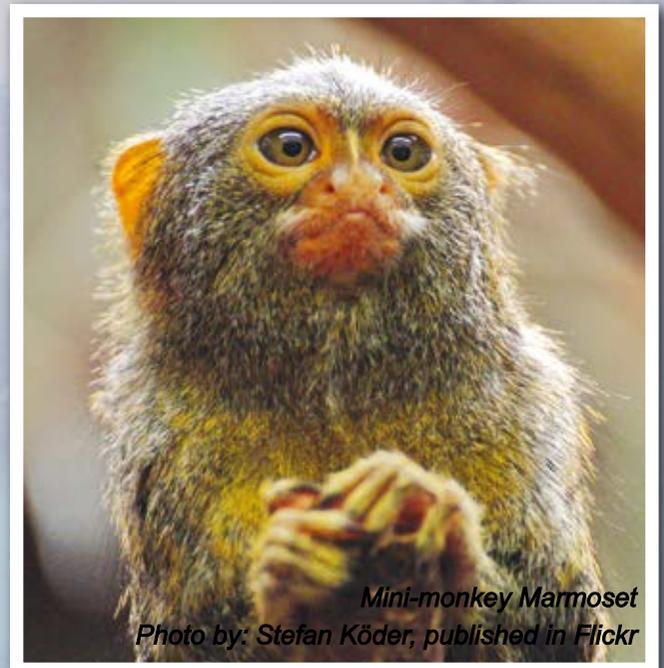

Toy-bobs are the usual kids, they are playful, curious, very active and agile and... small.

MINIATURE IS NOT A DWARFISM

There is nothing unusual in the birth of cats of small size. If we take the examples from wild nature we can find the number of prototype there. Miniature animals is not a dwarfism as some people assume, but a proportionally to a "large prototype" downsized types, which has found their proper place within in the natural selection conditions (usually a different type, breed).

No-one is surprised but moved by small African hedgehog whose weight is about 350-500 g, that is four times lighter than his congeners in hedgehog family.

Or Fennec fox which is the smallest animal in dog family. Shoulder height of that fox is only 18-22 cm, body length does not exceed 40 cm., and the maximum weight is one and a half kg.

*Mini-monkey Marmoset
Photo by: Stefan Köder, published in Flickr*

Mini-monkey or Marmoset is the smallest monkey on Earth. Adult's weight is 120 g maximum and the length is 8 cm. Platyrrhine monkeys of Marmoset family inhabit in the forests of South America, Brasil, Peru, Ecuador.

The other representative of mini-animals is an amazing fat-tailed (dwarf) lemur, which is distributed in the west and south of Madagascar. His head and body length is about 20 to 23 cm, and tail length is about 20-27 cm. the body weight is ranged between 120

Fat-tailed (dwarf) lemur, photo by: Bernard Dupont, published in Flickr

Rusty-spotted cat, photo by: Joachim S.Muller, published in Flickr

and 270 g and reaches its maximum before hibernation.

Among the wild cat race the smallest is a rusty (red)-spotted cat. It is one of the Asian cats genus and is a close relation of Bengali cat, both of them inhabit only in India and Sri-Lanka. By the way, it is not red literary, but its short hair is gray with red or rusty spots on the back and sides. Body length is 35-48 cm, hair length is 15-30 cm, weight of the adult is only 0,9-1,6 kg. Therefore she is one of the smallest wild cats in the world.

In the world of purebred cats Singapura had been considered the smallest before Toy-bobs appeared.

Miniature breeds of animals are over the top nowadays. They play the role of a fashion accessory or an expensive life toy

Where there's demand, there's supply. Therefore chasing more exotics and fragility some unscrupulous breeders obtain not miniature but dwarf animals.

Unfortunately, while working over Toy-bob breed, some breeders, being not scrupulous enough, haven't cared about saving the unique appearance of those cats, but made a lot of experiments not having examined their

kittens on genetic defects. Fashionable name, exotic "toy", what else is important?

In the cynological world the situation is very similar. Decreasing height and weight of healthy dogs is not so simple process. Puppies in regular litter are generally born the same size as their parents or even a little larger. Chasing extremely low weight some unscrupulous breeders build up their work on mating large and healthy female with dwarf male not taking into account their compatibility and possible hereditary diseases leading to the nursling's death.

Dwarf animals suffer from following pathologies:

- *Hydrocephalus symptoms, such as excessively large head in comparison with body.*
- *Unhealed fontanel which stays open the whole life.*
- *Hernia which sometimes lead to open abdominal cavity.*
- *Joint problems.*
- *Imperfect tooth system - overshot or undershot bite, absence of incisor teeth, no tooth enamel.*
- *sparse hair caused by thyroid gland dysfunction.*
- *Underdevelopment of the visceral organs.*
- *As a rule, short age of life.*

Miniature animals are as we have mentioned earlier, are animals (usually another type/ breed) which were downsized proportionally to a "large prototype", but without any extreme, brought by a human.

SHORTENED TAIL: VARIETY OF SHAPE

Pixie-bob

American Bobtail

Description of Toy-bob's tail: "minimum length is 5 cm, must not extend past a stretched hindhock; flexible, curves are acceptable" (TICA standard).

To sum up we can say that even short tails can have the variety of shape and length, flexibility and quantity of curves. The short tail does not disturb any of those natural breeds to live healthy life, except total absence of one.

So the short tail of our Rostov lusty children Toy-

Not moving away towards wild cats' world, where lynx is the brightest representative of short-tailed, we can consider different forms of tails of thoroughbred congeners.

American Bobtail's tail is described as "short, flexible and expressive and may be straight, slightly curved or slightly kinked or have bumps along the length of the tail, must not to extend past a stretched hind hock in length Tail to be broad at base, strong. Straighter tails should exhibit a fat pad at the end of the tail" (CFA standard).

Our "compatriot" Kurillian Bobtail has more habitual for sight short tail with stronger restrictions: "the tail is kinked

Kurillian Bobtail

and/or curved, with one or more kinks in any combination. The length (without furnishing) is between 3 and 8 cm. The fur on the tail is longer than on the rest of the body. (WCF standard).

bobs serves to show their beauty and harmony. Being attentive enough in breeding able to dismiss the possibility to shorten the tail until it's gone you can do no harm to the animals' health.

SIAMESE COLOUR: MAGIC AND PROBLEMS

Aboriginal Siamese cats were the result of mutation in the full color C gene. Well-known English biologist and geneticist has written that "One of the first mutation a long time ago was the appearance of black color". Therefore all variety of colors existed nowadays is the result of fixed natural mutations of very familiar with everybody wild agouti color.

Siamese or Himalayas color is always the result of recessive cs gene work. It is a heat sensitive gene, which suppresses the activity of color ferment according to the body temperature. The lower the temperature, the more active is this gene. Consequently, the higher the temperature, the lower the effect is.

Which explains why a Siamese has dark extremities such as the face (so-called mask), ears, tail and legs. Those shades should be colored as even as possible. Siamese cats are white at birth, with pink foot-pads and noses, this is due to being in the constant warmth of the mothers womb. The shade color comes out in a few days as a thin line at the age of ears, then on nose edge, foot-pads and tail.

ONLY VERY CAREFUL AND UNHURRIED DEVELOPMENT OF THE TOY-BOB BREED PROVIDES THE OPPORTUNITY NOT TO CROSS THE THINNEST LINE BETWEEN DIMINUTIVENESS AND DWARFISM. ONLY BREEDERS WHO ARE FAR FROM TEMPTATION TO BECOME REACH ON VOGUE ARE ELIGIBLE TO BREED THOSE INTERESTING CATS..

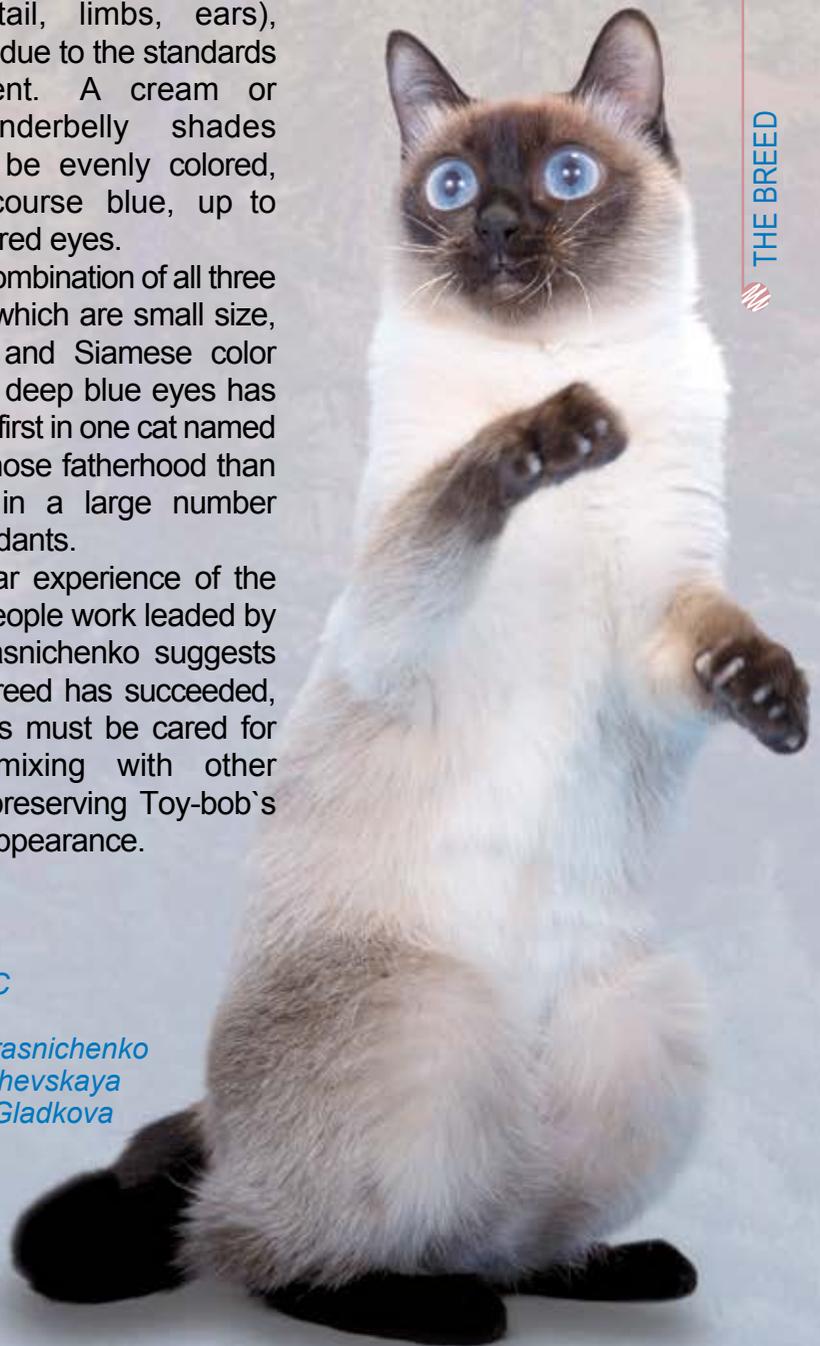

All cats of Toy-bob breed are Siamese colored and get darker with age. It is a natural process, so you cannot call it a problem. The uppermost for those colors is to have high-contrast mask and points (tip of tail, limbs, ears), which is due to the standards requirement. A cream or white underbelly shades ought to be evenly colored, and of course blue, up to violet-colored eyes.

The combination of all three qualities, which are small size, short tail and Siamese color with large deep blue eyes has appeared first in one cat named Kutciy, whose fatherhood than occurred in a large number of descendants.

25-year experience of the party of people work led by Elena Krasnichenko suggests that the breed has succeeded, and that is must be cared for without mixing with other species, preserving Toy-bob's peculiar appearance.

*Velena-KUTC
Toy-bob cat
breeder E.Krasnichenko
owner E.Lazhevskaya
photo by: S.Gladkova*

Toy-bobs has become the cherry on the cake in different expositions, the standards are accepted in five felinological systems. And that is not even a limit...

THE BREED

ASC` STANDARD OF TOY-BOB – (TOB)

GENERAL

Appearance: Cats of small size, short body with strong bone structure, broad chest and short neck. Well-muscled. Back is almost straight. Legs are rather strong. Shortened tail. Only sealpoint color.

Size: small sized, adult's cats preferred weight is less than 2 kg. Males can be little larger than females.

THE HEAD

Shape: Short trapezium shape with gently rounded contours.

Forehead: Rather full.

Profile: Distinctly curved profile with a dip from the forehead to the nose at the eye-middle level. Definite stop is not allowed

Nose: Nose is medium in length. Bridge of the nose is straight or slightly curved.

Short and powerful neck

Velena-KUTC
Toy-bob cat
breeder E.Krasnichenko
owner E.Lazhevskaya
photo by: S.Gladkova

Chin: strong.

Cheekbones: medium, rounded, clearly defined.

Muzzle: short, rounded, without pinch.

EYES

Shape: large, open wide, almost round, very expressive.

Color: intense deep blue

EARS

Shape: medium sized, wide in the base, with rounded tips.

Placement: High set. Slightly tilted forward. The distance between the ears is no more than one ear width.

BODY

Neck: short, powerful.

Body structure: square, smaller than medium size, compact, short, solid, muscular.

Rib cage: broad. The back is almost straight.

Back: almost straight.

Sexual dimorphism is not very pronounced.

Тело почти квадратного формата

LEGS:

Strong, medium in length, hind legs slightly longer than forelegs.

Paws: rounded, with elongated fingers on hind legs.

Toy-bob cat

TAIL:

Flexible, preferably is composed of several kinks and curves in any combination, but may be also almost straight. There are not less than 3 vertebrae. Visible length is not longer than 1/3 of the body length.

COAT:

Structure: short, dense, resilient, not close lying, with developed undercoat. The topcoat is slightly longer than the undercoat.

Colour: seal-point only. Evenness of the body color and contrast with the points are more important than whiteness.

Point Colour: dense and even. Mask, ears, feet and tail should match in seal

TEMPER:

Active, sociable, curious, calm and even-tempered, like to communicate with people and other animals.

FAULTS

Head: wedge-shaped or narrow head; weak chin; pointed or elongated muzzle
Incorrect bite; too slight dip in profile; stop.

Eyes: almond shaped, any color, except blue. **Ears:** big, pointed, wide set.

Body: not typical body size, too elegant or frail, elongated.

Coat: too silky coat, plushy coat .

FAULTS PRECLUDING THE CERTIFICATE

Head: straight profile

Body: any changes of type suggesting outcrosses with other breeds

Tail: longer than 1/3 of the body length, less than 2-3 vertebrae, lack of tail, inflexible tail

Coat: long or semi-long, any coat colour except seal-point, dark painted to the roots areas on the belly or chest white spots and lockets

DISQUALIFICATION

Aggrisseveness and other general disqualifying features: Strabismus, long coat.

THE BREED

SIMILAR BUT DIFFERENT

COMPARISON OF STANDARTS BETWEEN MEKONG BOBTAIL AND TOY-BOB CAT BREEDS

Toy-bob and Mekong Bobtail seem to be similar breeds. Both are short-tailed color-pointed and come from somewhere in the 90th. When demonstrated apart from each other, people, sometimes even experts, can ask: "What's the difference?" The reason of such doubts is in small livestock of those breeds in comparison with other breeds. However, Mekong Bobtail has already passed their peak of popularity, whereas Toy-bob is only at the beginning of their recognition in different systems, even though both breeds are well-known in Russian felinology for almost 25 years.

IMPORTANT

*Cat Ch. Runa de l'Amour of Zefir, breed Mekong bobtail, the owner T.G. Gacrikova
Photo by: KaDis*

However, after seeing these two cats together, all questions disappear. The differences between two breeds are as obvious as those of British Shorthair and Russian Blue cats. First of all, it is the size: even adults, considering their name ("toy"), almost twice smaller than their peers, including Mekongs. The size of the adult Toy-bob equals the size of 5-6 month old Mekong bobtail.

We have two breeds: Toy-bob and Mekong Bobtail. Each breed has developed on its own way. Mekong Bobtail is short tailed representative of South-Eastern and Central Asia, and Near East cats' population, which has obtained its recognition in Russia. Whilst Toy-bob is completely Russian breed from Rostov-on-Don, created by the breeder E. Krasnichenko.

*Cat Velena-KUTC, Toy-bob breed, the owner: E. Lazhevskaya
Photo by: S. Gladkova*

Small size of Toy-bob are especially noticeable next to the Maine Coon tail.

TOB Elis-KUTC,
owner E. Krasnichenko;
MCO Jessica Imperial Coon*RU,
owner S. Lekomtseva.
photo by: Marina ZHarinova

The next question is about the tail - what is the difference? Mekong's tail is short and has unique form - it can have the shape of rose, chrysanthemum or just like pom-pom, and the way they wag those tails is very cute and funny. ASC-SuperCats standards describe that tail as composed of irregular kinks, knots or curves in any

combinations. It is obligatory kinked or curved at the base (first vertebrae) and flexible. The tail consists of at least 3 vertebrae and visible length is not longer than 1/4 body's length."

Requirements to the Toy-bob's tail are not so strict, but according to ASC Standards their tail is flexible, preferably is composed of several kinks and curves in any

combination, but may be also almost straight. There are not less than vertebrae. Visible length is not longer than 1/3 of the body length."

Which means that Mekong's tail cannot be straight as opposed to Toy-bob's tail.

But for both breeds having a tail is a necessity! What is more, the tail must have at least 3 vertebrae - that is extremely important for bobtails. Those requirements are related to cats' health - the absence of Manx gene. Having this gene is only possible for Manx and for semi-longhair kind of Manx - Cymric, which was bred as a result of natural mutation. Faulty breeding can cause dangerous consequences for the posterity. Therefore all of the international felinological systems fit short hair cats have the requirement of having the tail with at least minimum number of vertebrae.

IMPORTANT

Different tail shapes and length for Toy-bob

THE REST OF THE STANDARTS OF BOTH BREEDS*

TOY-BOB

MEKONG BOBTAIL

HEAD

Shape: Short trapezium shape with gently rounded contours.

Cheekbones: medium, rounded, clearly defined

Muzzle: short, rounded, without pinch.

Forehead: Rather full.

Profile: Distinctly curved profile with a dip from the forehead to the nose at the eye-middle level. Definite stop is not allowed.

Nose: Nose is medium in length. Bridge of the nose is straight or slightly curved.

Chin: strong

Shape: medium in length with oval contours. The top of the head is slightly flat.

Cheekbones: rather high. In males can be more developed and broader.

Muzzle: oval with whisker break

Forehead: almost flat, with soft transition at eye brows level to flat top of the head

Profile: curved with the dip below the eye level

Nose: roman nose in form of a smooth arc from the transition to the tip of the nose. Medium in length, uniformly broad throughout its length.

Chin: strong, forms a vertical line with the tip of the nose

Comparing breeds we can see that Toy-bob has rounded head with short muzzle, rather full forehead, distinct curve to the nose with straight or

slightly curved bridge. Whereas Mekong has snake shaped head with oval contours, forehead and the top of the head are almost flat, must be

eye level. The very important feature of Mekong's head is "the Roman nose", that is having the form of a smooth arc from transition to the top of the nose.

EARS

Shape: medium sized, with rounded tips.

Placement: High set. Slightly tilted forward. The distance between the ears is no more than one ear width.

Shape: large, broad at the base, with slightly rounded tips.

Placement: set rather high, no more than one ear width apart. Slightly tilted forward. The outer edge set slightly back.

EYES

Shape: large, open wide, almost round, very expressive.

Color: intense deep blue

Shape: large, oval, set almost straight

Color: blue, the deeper the better

Both breeds have large expressive eyes, however Toy-bobs have round eyes, whereas Mekongs have oval ones.

Comparatively large ears of Mekongs are in harmony with ovals of their heads, whilst Toy-bobs has medium sized and high set ears.

Both breeds do not have large size. Though Toy-bob cats are considered small in particular. After birth they weigh about 40-50 grams and their size in adulthood twice or half again smaller than

Mekong Bobtail
Halif Galaxy Mekong, own. Kseniya
Klueva photo by S. Gladkova

TOB Elis-KUTC, own.
E.Krasnichenko

Mekong's. Weight of adult Toy-bobs is about 2 kg, while Mekongs weigh up to 3-4 kg.

Toy-bob's body is square, short and solid, whereas Mekong's one is rectangular, muscular, but yet slender and balanced. Toy-bobs, especially males, distinguish themselves having short, almost wrestler's neck.

In spite of the fact that the color of the breeds is the same - color pointed without white (Toy-bobs can only have seal-pointed version), texture and structure of the coat differs. While Mekong's coat is almost without undercoat, Toy-bobs are likely to have one, what is more the topcoat is nearly as long as the

coat. The structure of Toy-bob's coat is not close lying, but Mekong's is crispy.

Point scale of ASC is approximately identical for both breeds. Though, form of the body and bone structure of Mekongs (10 points) is less important than those of Toy-bobs. Mekongs' tail, on the other hand, its form and length are extremely valuable - 20 points (as opposed of 10 points for Toy-bob) However, the one thing, that do not depend on any systems and standards, and that is absolutely the same for our colorno cats is their character! Both of them are very sociable, friendly, clever, curious, active, they like to communicate with people, as well as with other animals. Those who are lucky enough to live with such cat are conquered with their deep blue eyes, small tail and incredible charm.

IMPORTANT

Reference. Standard of Toy-bob cat is recognized by ASC- SuperCats and four other systems after examination of the livestock of 50 cats' pedigree, whose origins are from Rostov breeding line. Standard of the Mekong bobtail is only described in advance.

FROM THE HISTORY OF RUSSIAN FELINOLOGY

TOY-BOB. BEAUTIFUL BREED WITH NO DOUBT

BREED HISTORY

2015

We came from the regular International cat exhibition. And as always, our little daughter meet us with words: "Show me favours and cups!! Let's hang them on the wall and admire them!" We take our favours out. They are different and unique on each exhibition. We hung up our awards and my eye accident-ly lighted on the very first favour of ours. And incidental memory awakened...

THE VERY BEGINNING...

In 1983 I picked up Siamse cat (as I thought back there) in the street, which was skinny, sick and dirty, and I brought it home. We washed it, started to cure, feed and care for that cat. We gave him the name - Mishka. he had a quite big muzzle, severe character, rather short tail, which was broken in four. Those days we were far away from the felinology science (actually, there was no

such science in the USSR), and I thought that I have the very thoroughbred Siamese Royal cat. Only later, in many years time I understood that our Mishka is simply Siamese colored cat.

January 1985.

There was a snowy cold winter. My Mum was coming back from work, when suddenly something fell down on her chest, held hard onto her coat's collar and started purring loudly. Thoughts raced through her head immediately: "Who's this? What's this? If it's purring, then it's possibly a cat...". And it actually appeared to be a cat. Not a simple cat, but Siamese cat, except it was small and with strange tail. "Royal one! Now Mishka will have a wife.." my Mum assumed, put it in her bosom and ran back home quickly.

We started observing her in greater detail. Rather small head, thin body, spinal column is available to count and the tail is very interesting in the shape of bagel. We started pronouncing different names, when our skydiver reacted with "Meow" on the name Simka.

Sweet couple lived together happily, and apparently loved each other. After mating season cute kittens were born and we had a lot of those who wanted to become the owners of "Royal Siamese". So for several years we gave away presented our kittens.

In 1988

Simka gave birth to the regular litter of 3 kittens. one of them was twice smaller than his peers and had a tiny tail, that is there was a small bob instead of tail. That was the first time we saw anything like that. So far we had different tails including rather short and a little longer but always with several kinks. Though that baby had a tiny tiny tail. There was no hesitation about the name - Kutciy (rus. for "dock-tailed").

Kittens were growing, while our little one was growing very slowly, his litter mates were twice larger. He differed from the others not only by size but by his total appearance. Large round eyes, almost square shape of body. And his behavior was not "cat-alike".

He walked with me along

the boulevard running a little ahead devotedly looking at me with his large blue eyes, where you could see the words: "Am I doing everything right? I am very obedient, I am not running away! Please, praise me!". No passer-by could avoid asking a question: "What's the breed of your dog?" Imagine their amazement after hearing that it was a cat. But of which breed?..

1989.

We are going to the cat exhibition which is the first one for us and for Kutciy indeed. From the introduction speech we learnt that organizers of the exhibition arrived from Dnepropetrovsk (which became CFC "Alisa" afterwards and helped us to arrange advertising exhibits in Rostov-on-Don).

It was announced that the winner was to be the cat which collected the largest quantity of admission tickets left in their cage by the visitors. And naturally breed definition and expertise were assumed to appear. There came our turn. Firstly they ought to have defined the breed. Experts were examining Kutciy, whispering and giggling with one another when they finally delivered verdict: Siamese minicat.

Although looking it up through the whole encyclopedia, experts could not find the breed with such name. Then someone assumed that it is a kitten and we mixed something up with the date of birth, therefore it is simply Siamese cat without the prefix "mini". That was our first "expertise".

By the end of the second day there was the announcement of results. To our complete surprise Kutciy got the second place and made to the top three. We were overfilled with happiness! We were the winners, spectators loved us!

Our second exhibition took place on the 27-28 of October 1990. And the same question again: "Why did you bring a kitten?". That was about the same cat Kutciy, that already was 2,5 years old. During examination we were told that there is no such breed in the catalogue, therefore that breed does not exist. "If you manage to breed the female to your boy, then you will have miniature

breed." — they said.

Kutciy decided to solve that genetic problem himself. When Simka (his mother) started asking for a cat our gentleman could not refuse to the lady... That is how in two months we got posterity of 4 kittens — 3 sons and one daughter. She was the smallest and with curved tail. Is it the future girlfriend for Kutciy? We named the tiny cat Puma and left her live with us. The rest "Royal Siamese" were presented again.

1992. CFC "Skif", which had opened not so long ago arranged first evaluative cats' exposition in Rostov-on-Don. It was not too large - about 20-25 exhibitors (comparing with today's scope, that was not even the exhibition but a club's "get-together").

The head of the club Irina Sidorenko introduced an expert from Saint Petersburg Galina Batkova. After we were invited, I came with both Kutciy and Puma, put them on the table and I saw the silent question in the expert's eyes "Who are they?" answering immediately: "These are adult cats which were born

from the couple of siamese-colored cats"... After one-minute conversation with the head of the club G.K. Batkova asked me to bring and show the parents if possible.

After long and silent examination of Mishka and Simka she asked to show Kutciy and Puma again. She also examined them for a long time, writing and drawing something. Then she thanked us and asked to stay after the exposition for a conversation.

— I wonder how it is possible for not even average but large cats to give birth to that Kutciy. Furthermore, you also got such a small girl. You should keep working, what if it is actually our future breed that will conquer all the world!.. How shall we name that breed? We must already think of it.

At once we have decided that there should be the word "Don" in the name, as we are from Rostov-on-Don. Then Irina Sidorenkova reminded that the experiment had officially started in the club "Skif", while Galina Konstantinovna suggested that "we were brought up from cats looking like Thai ones".

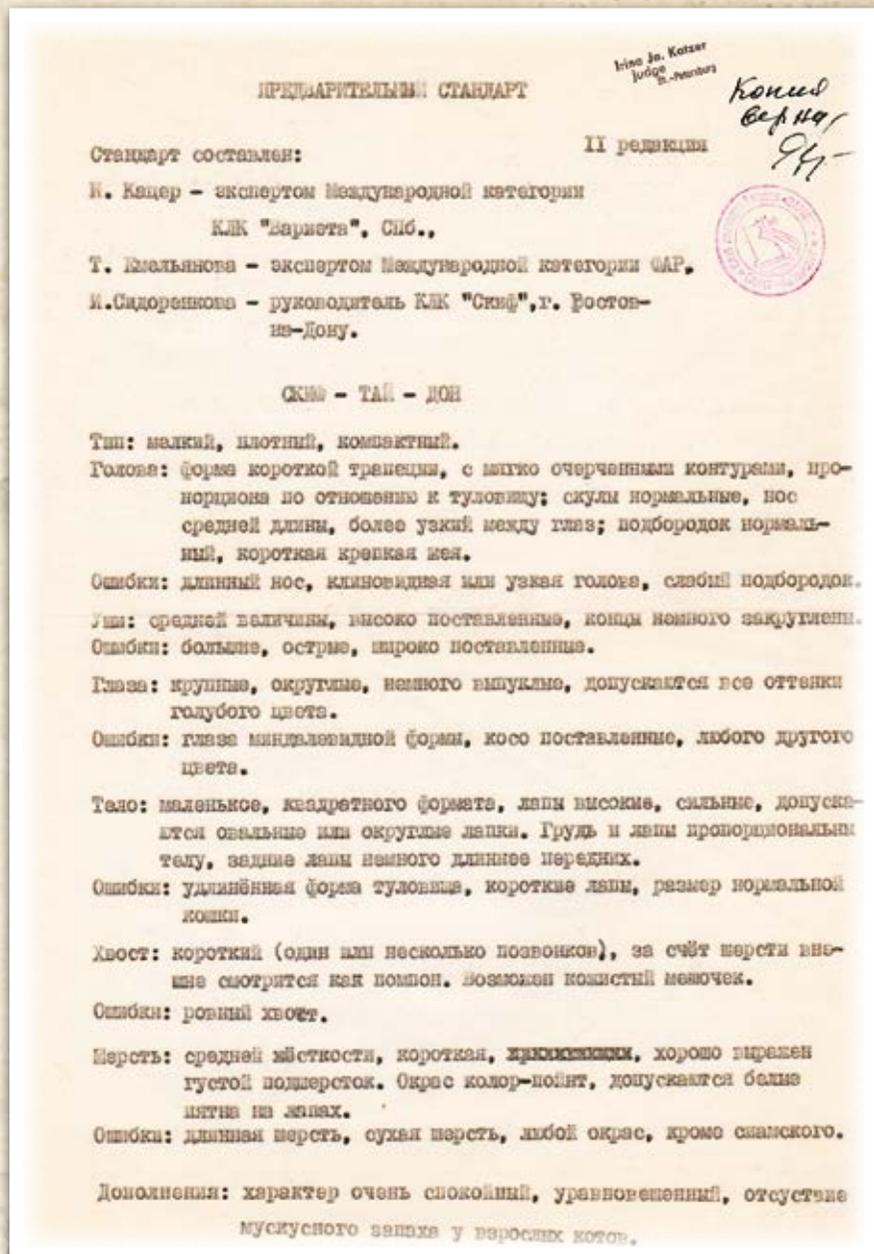

Let's put the word "Thai" and we get "Skif-thai-don". She also told us she made some draft of preliminary standards and that she was going to tell about our Rostov's wonder to other experts in Saint-Petersburg.

In the spring of 1993 CFC is organizing their second exposition where the number of cats is twice higher - nearly 50, which is considered as a very large exhibition those days. Here we met I.Nemyikina (she was the one who started the development of Russian hairless breed - Don Sphynx). She introduced me to the expert I.Katser. Irina YAKovlevna studied my cats with intense interest, I.Sidorenkova showed the standards' sketch made by Batko-va on the previous exposition. Having studied the notes,

I.Katser and I.Sidorenkova composed the standard of experimental breed - Skif-thai-don. In the end we got the invitation to the exhibition in Saint Petersburg and were asked to show our

On that exposition I.Katser introduced us to Tamara Semenovna YEmelyanova who was internationally certified expert. I can still remember it very well - empty hall, the light is on only over the scene, where there is a table with Kutciy and Puma on. And two internationally certified experts I.Katser and T.Yemelyanova studying them and correcting the standards written in Rostov-on-Don.

THE WAY THE STANDARD OF THE EXPERIMENTAL BREED SKIF-THAI-DON LOOKED IN THE FAR 1993

Two weeks after Saint Petersburg we went to the exhibition in Kharkov. The expertise were made by the famous geneticist-felinologist I.V.Shustrova. Having studied preliminary standard, Irina Vladimirovna started to examine Kutciy and Puma with keen interest. and suddenly Kutciy uttered his famous "oww". Everyone were taken aback!

Of course it was not the dog's "bow-wow", but when our babies play with one another or when they like something, they produce peculiar sound which are not likely to be heard from cats. "Very interesting! and I like these pets as well", - noted Inna Vladimirovna. - Let's collaborate together with Inna Kartser and plan future programme on breeding your cats. I also met I.Shustrova several times afterwards and was consulted on breeding.

At the beginning of November 1993 me and T. S. Y e m e l y a n o v a received an invitation to the First International exposition of Russian cat breeds. it was written all about this event, our cats were shown on TV throughout our country, furthermore, Reuters agency gave the report of that all over the world in the news. I.Nemyikina still have note from the "Moskovskiy komsomolyets" (one of the most popular Russian newspapers):

" FAR(Felinological Assosiation of Russia) through has hold The first exposition of Russian cat breeds. this event took place on Noviy Arbat in the city hall of Moscow next to the White House, still unrepaired and sooty... Being tired of commotions the people went into the city hall, which windows are still barred withplywood. Whole families has come for the sake of quiet plesure and joy that they get from communication with our Russian purrs. Dads were strongly impressed by

Bobtails that were brought from the Kurile irelands to Moscow for the first time. Ladies were amazed by Russian hairless - bald Sphynx. there are only three such cats that live in Rostov-on-Don. Kids could not go away from caves with Skif-thai-don cats - the breed that had been developed recently..."

My cats had never seen such a large amount experts studying them with so intense interest. We have had the WCF-expertise from O.S.Potekhina, E.E.Morozova, M.V.Putilina. And above all, first professional photos of our cats were taken.

Time moved along, our couple was having posterity.

almost each litter had small kittens and larger ones. The point that was uppermost for us at birth was a tail. You never now what kind you would get. There was almost no identical tails. (Untill now when the kitten has just been born we look at the tail first, and than at the gender.)

Lifestock of the nursery "KUTC" was increasing and the number of people who wanted to get kittens of the new "mini-breed" was growing as well. We explained that the kittens who were born in breeding are not given away absolutely for free as pets. Nothing but size was the difference between them

РЕКОРДЫ МЯЩЕЦА

Над выведением новых пород кошек люди работают больше ста лет, но животные, которые появились, в основном различаются окрасом, длиной шерсти и формой тела. По размеру все породы примерно одинаковы. И вот интересное сообщение из Ростова-на-Дону: новая порода карликовых кошек — скиф-той-дон. Масса взрослого животного не превышает полутора килограммов, а чаще составляет 1-1,2 кг.

Совсем недавно эти кошки демонстрировались на выставке в здании мэрии (бывший СЭВ). Окрас у них, как у сиамских, — сил-пойнт. Хвоста нет, вернее, есть, но очень короткий и закрученный. Заводчик этих животных Елена Красниченко могла часами рассказывать о своих питомцах и очень оберегала их от других кошек — ведь той-донцы отличаются не только маленькими размерами, но и добрым, покладистым характером, и поэтому очень уязвимы. Видите, на фотографии у одной из кошек ушко загнуто — это результат встречи со «старшим» братом, тоже кошачьего племени. Будем надеяться, что новая порода получит официальное признание и станет украшением международных смотров.

of breed into pithy and emphatic TOY-BOB.

The standard on Thai Bobtail, which is nowadays called Mekong Bobtail, was presented on the same conference. L.K. Yesina conducted pioneer formation of this breed.

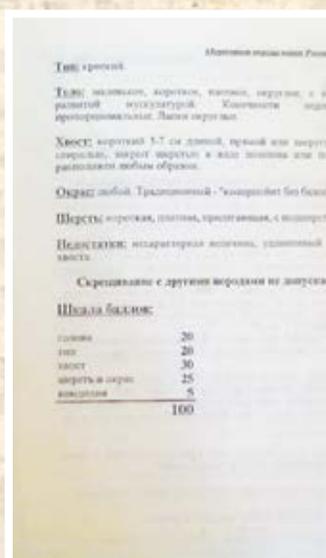

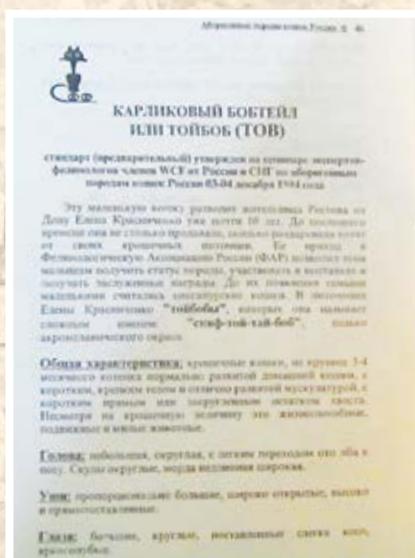

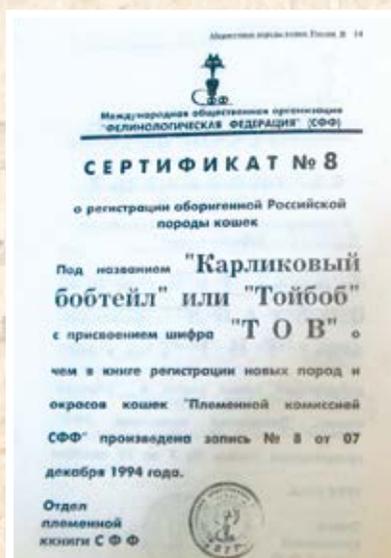

In 2008 Ludmila Konstantinovna called me and we talked for a long time, we discussed the procedure of official acceptance of Toy-bob, how and where to start. She told me that she really wanted Mekongs to have the same prominent eyes as Toy-bobs have, she set up a lot of experiments with my, but larger cats, who arrived particularly from my house, as they were not left for breeding. But she had not managed to realise that idea, so she left it afterwards. However, it is interesting that now in Mekongs' litter small kittens appear. Those come from sides with my cats' blood...

BREED HISTORY

and actual Skif-thai-don cats - they had the same huge round blue eyes, the same perfect character, they were just larger. Geography of During the period from 1993 to 1999 geography of our cats had expanded significantly, people arrived from all over the country to take our kittens away. Purebred cats left to Moscow, S.Petersburg, Kiev, Kaunas, Krasnodar, Irkutsk, Perm, Kharkov, Sevastopol, Donetsk, Pervouralsk, Berdyansk, Chelyabinsk, Gornel,

Krasnoufimsk, Magnitogorsk, Astrakhan...

In December 1994 regular stock-breeders` and experts` seminar took place. 57 specialists of top felinological organisations from Russia, Belarus and Ukraine from 21 cat fanciers` clubs participated there. Standards on Russian native breeds, including ours, were approved on that meeting. Our standard was composed and introduced by O.S.Mironova, who had also changed our complicated name

...A lot of events had happened within more than three decades, they were pleasant and not really, those that made us laugh and those that hurt as so deeply. There can be a whole book about it and the breeders actually have such intentions. Perhaps Toy-bob fanciers will be able to read the story without any contractions. After all, analysing the facts, we can see that Kutciy was born almost at the same time as Russian felinology was born And finally look at his date of birth - 8.8.1988. The symbol of these numbers is ∞ — infinity...

Have a pleasure!
