Future Meetings

<u>Year</u>	<u>Meeting</u>	<u>Club/EO</u>	<u>City/State</u>	<u>Date of Meeting</u>
2013	Winter		Bogota, Columbia	01/25-27/13
2013	Spring		Electronic	05/17-19/13
2013	Annual	NW	Bellevue, WA	09/01-02/13
2014	Annual	NE	Boston, MA	08/28-29/14

109.1.1 Annual Convention. Labor Day weekend each year is reserved for the Annual Convention. No other shows may be held the weekend of the Annual Convention with the following exception. A club may receive permission to hold a show on the Annual weekend upon application to the Board. Application must state specific reasons for the request for exemption and why such a show would have no impact on the Annual.

109.1.1.1 The rotation for the Annual Conventions shall be: Mid Atlantic - 2011, Great Lakes - 2012, Northwest -2013, Northeast - 2014, International - 2015, Southwest - 2016, South Central - 2017, Southeast - 2018, Mid Pacific - 2019.

109.1.1.2 Proposals to host the Annual Convention in the designated region must be received for the Annual Meeting 3 years prior to the proposed convention.

109.1.1.3 In the event no club submits an acceptable proposal, any club in any region may submit a proposal to host the Annual Convention by the agenda deadline for the Semi-Annual Meeting 2½ years prior to the convention and a notice soliciting such proposals shall be published in the TICA TREND.

109.1.1.4 The subsequent designated order of rotation will remain the same.

109.2 Meetings of the Board.

109.2.1 All Board Meetings shall be scheduled for a minimum of 2 days.

109.2.1.1 Meetings of the Board shall be the fourth full weekend in January (Winter Meeting, the third full weekend in May (Spring Meeting) and the week immediately preceding Labor Day weekend (TICA Annual).

109.2.1.2 The Winter Meeting shall be held in Harlingen TX without a show OR at a location outside the United States in conjunction with a show, approved by the Board.

109.2.1.3 The Spring Meeting shall be held in the United States, rotating from Central to West to East, with or without a show. The meeting venue must be at or near a major international airport at a hotel with adequate meeting space, full restaurant service and airport shuttle.

109.2.1.4 The Winter and Spring meeting locations shall be selected by the Board without consideration of accompanying show.

109.2.1.5 Minutes of all meetings of the Board of Directors shall be completed within 10 working days following the meeting.

1024.1 Amendments. Proposals to amend the By-Laws shall be considered by the Board of Directors at regularly scheduled meetings. **Proposals from the membership must be in writing and received by the Rules Committee no later than 90 days prior to the opening day of the meeting** to allow time for review in order to reach the Executive Office 60 days prior to the opening day of the meeting. Proposals received by the Rules Committee after the 90-day deadline will be placed on the following meeting agenda. Proposals are to be submitted according to ARTICLE TWENTY-FOUR, 124.1.1 of the TICA By-Laws.

No.	ITEM	LEAD	STATUS
1	Blueslips online.	EO	Pending
2	Program prefixes and genetics into Registration Program	EO	Pending
3	Make the Registration Certificate a full page.	EO	Projects
4	Revise By-Laws 15.5 to allow people in other associations to run for breed committee. Give two options--one that allows people to serve and one that does not.	Rules	A12 Agenda
5	Pedigrees being issued by clubs outside of North America (we already have a procedure in place for NA clubs). Work with the EO on establishing a procedure to allow registries to become "accepted" registries to the EO, e.g. using criteria like licensing judges and producing shows, if they can establish with you that they have the qualification to run a registry (e.g. letting you know how many years they have been registering cats and how many cats are in their database). Part of the application process should also be a trans-lation" of their color names / codes to TICA colors and a contact person in case there are questions regarding a pedigree from their registry submitted to you.	Rules	W13 Agenda
6	Amend Breed Committee rules to read that you must be a member of the breed committee 6 months prior to the first of the month in which the ballot is sent.	Rules	A12 Agenda
7	Revise Standing Rules 303.6.2.1 and 303.7.3.1 to be in compliance with By-Laws 7.1.4: 303.6.2.1 Having met the requirements for and upon advancement to Preliminary New Breed (PNB) status, a cat in PNB may be shown immediately upon advancement by the Board. 303.7.3.1 Having met the requirements for and upon advancement to Advanced New Breed (ANB) status, a cat in ANB may be shown immediately upon advancement by the Board.	Rules	A12 Agenda
8	Place proposal for the Golden Tabbies on the agenda for the Annual.	Rules	A12 Agenda
9	Motion 23 to table the Siberian Committee appointments to the Annual and to ask the interested parties to send their resumes, showing their qualifications under By-law 15.4.2 and explaining why they would like to be considered, to the Board.	Board	A12 Agenda

Attention: TICA Board Committee

Subject: TICA Board Appointment to Inactive Snowshoe Breed Committee

Enclosure: (1) Application for Snowshoe Breed Committee for Virginia Gabbert

Respectfully request that the TICA Board appointment Virginia Gabbert to the inactive Snowshoe Breed Committee.

During the normal filing time for election to the Snowshoe Breed Committee, a communication mix up resulted in the committee being short one member. One member had stated that she had filed and I did not follow up on to ensure that there were enough members filing for the breed committee to fill the committee.

If there is a problem or you have questions or need additional information about this appointment, please contact me at katsn1@yahoo.com or if there are questions or you need additional information about the application please contact Virginia Gabbert at valee2011@yahoo.com.

It was not our intention to avoid filing fees, so I have attached an application from Virginia and the filing fee can be charged to my Discover Card [REDACTED]
[REDACTED]

Thank you for considering this appointment and application.

THE TICA BY-LAWS STATE:

14.1 Breed Section. A Breed Section(s) shall be established for each breed or breed group and one or more sections for household pets. Each member shall automatically be eligible to apply to belong to one Breed/Breed Group Section as a part of his or her membership.

14.1.1 Any member may belong to additional Breed/Breed Group Sections by applying for and paying an additional fee AND by showing proof of one of the following:

14.1.1.1 Individual registration of a cat of the breed/breed group in the three years immediately preceding application.

14.1.1.2 Registration of a litter of the breed/breed group in the three years immediately preceding application.

14.1.1.3 Showing a kitten, cat, or alter of the breed/breed group in the three years immediately preceding application.

14.1.1.4 Ownership of a kitten, cat or alter of the breed/breed group.

113.1 Qualification. Each member in good standing, one whose dues are paid and who has no outstanding indebtedness to TICA or to any TICA club, and who is not/was not on the Temporary Suspension List on the qualifying date, who was a member in good standing 6 months prior to the first day of the month in which a ballot is to be mailed, shall be eligible to vote.

114.2 Announcement of Candidates. After the initial election, any member who has been a member in good standing for 2 consecutive years immediately preceding shall be eligible to seek office and shall declare his candidacy in writing to the Executive Office not more than 6 months nor less than 2 months before the election month with the filing fee established by the Board of Directors. If no member in the region or no member in the breed section has been a member for the 2 years immediately preceding the election, the 2 year membership requirement shall not apply. This shall entitle the candidate to be listed as a candidate for the office sought in every issue of the newsletter including the newsletter prior to the ballot being mailed to the membership. Each candidate shall be entitled to publish a summary of his/her experience, credentials and platform in accordance with Standing Rules 1014.3. No other advertisement, endorsement or article on any candidacy may be printed in the official newsletter. Candidates who are drafted by write-in vote of the membership shall fulfill all qualifications of those filing for office.

15.4.2 Qualifications for Election to a Breed Committee. Candidates for election to a Breed Committee shall provide documentation of having met the following requirements for election:

15.4.2.1 Have met the eligibility requirement(s) to vote in any TICA election (See By-Laws. 113.1)

15.4.2.2 Have met the requirements for breed section membership (See By-Laws 14.1)

15.4.2.3 Have paid TICA membership dues for the 3 years of the applicable term.

15.4.2.4 Have a TICA Registered Cattery (except for the HHP Breed Committee).

15.4.2.5.1 Have bred and registered with TICA a minimum of two litters of the appropriate breed within the 3 years immediately preceding the election (except for the HHP Breed Committee).

OR

15.4.2.5.2 Have owned and shown a cat of the appropriate breed in a minimum of five shows within the three show seasons immediately preceding the election. (Note: Applicants for Household Pet Breed Committee(s) must meet this requirement to qualify for breed committee election.)

15.4.3 No member shall be a member of more than three breed committees.

15.5 No person shall be eligible to serve as an elected officer of this Association who is an officer of another similar association, or who has any outstanding indebtedness to TICA or to a TICA club.

REVISED: 8/4/2009

APR 25 2012

D I A N E D U R Y E A

Member of TICA since 1996

Member of Siberian Breed Group since 2006

Cattery "Magnoliastar" registered 2006

Current member of First in Flight Cat Club, member since 2002

My name is Diane Duryea, and I am seeking a vacant position on the Siberian Breed Committee. I live in Tennessee, in the United States, where I have my cattery, Magnoliastar.

I have been involved with TICA since 1996, starting out with showing household pets. I became the owner of my first Siberian in 2006. I showed her to a SE Regional win that year. My interest in the Siberian breed continued to grow, and I continued to show, this time with an alter.

I was fortunate to meet another breeder, who was instrumental in helping me to lay the foundation for cattery. She became my mentor, and I learned a great deal from her knowledge and wisdom.

In 2008, I bred my first litter of Magnoliastar Siberians. I continued to show, and my cats continued to win regional awards, as well as an international award.

I breed my cats to the current standard. I have bred both standard colors, as well as colorpoint, and my top priority is that the cats that I breed are healthy, and with good temperaments. I am selective in my breeding program, and breed solely to advance the breed. I do not look upon my breeding program as a source of income.

I have been actively involved with First in Flight Cat Club, and actively participate in club activities as my job allows. I enjoy the camaraderie that the club provides, and am always willing to help out with other clubs in other regions when asked.

My job has allowed me to travel to various parts of the country, and I support the clubs in that region by showing my cats there.

I believe that the current breed standard should not be changed, but am open to discussion to clarify points that the breed section have deemed ambiguous.

I have mentored new breeders, and have been available to answer questions. When asked by another breeder for assistance with her laboring queen, I traveled to stay with her and assist in the birth.

If selected to the breed committee, I will encourage open discussion regarding issues that various breed section members have identified. I will work hard to dispel the notion of there being a “American” standard and a “European “ standard. I will continue to promote the breed, and will participate in activities to that end.

I want to thank the board for allowing me this opportunity.

M A R Y A N N J . C A V L I E R

Member of TICA since 2008

Member of Siberian Breed Section since 2008

TICA registered cattery "Dachakoshka"

My name is Maryann Cavlier, and I would like to submit my name for consideration to fill one of the vacant seats on the Siberian Breed Committee.

I first started with TICA in 1993, showing household pets. I showed for a few years, and then family and job got in the way. As an empty-nester in 2008, I went back to my love of showing household pets. It was at a show that I saw my first Siberian, and it was love at first sight. After much research into the breed, and catteries, I obtained my first Siberian alter in 2009. I was able to show him to a regional win that year, and every year thereafter. The following year, I was able to obtain my first queen. Working with other breeders as mentors, I had my first litter in 2011. After obtaining another queen, I had two more litters in 2012. One of the kittens from my first litter was shown to a regional award as both a cat and kitten. This was the validation that I needed to show that I was breeding to standard. I am working closely with another breeder, who was first my mentor, and now I can count as a friend. She has been available whenever I have had a question, and to give me the benefit of her knowledge and experience.

I breed Siberians to the current breed standard. I am working hard towards that goal, by selective breeding. I have learned that this is not a money-making hobby. I continue to breed, but look to produce cats that are healthy, with excellent temperaments above all else.

I enjoy mentoring, and have mentored several new exhibitors to TICA, not limiting myself to Siberians. Many new exhibitors start with household pets, and at times it can be a little overwhelming to someone new, but I do what I can to make the experience a pleasant one, and have the exhibitor come back. I am in the process of becoming an official TICA mentor, and look forward to that. I enjoy the interaction with the spectators, and love talking about the breed, and TICA.

If selected to the Breed Committee, I would like to maintain the standard as written. There has been much discussion about the breed standard in the breed section, but I feel that clarifying certain components can be accomplished more readily, and with the same result. I would work to encourage European participation and input, as that region has felt underrepresented in discussions. I have plans to show in either Europe or Russia in the next year, to show that there is one standard and that TICA is truly worldwide.

There has been much dissention in the Breed Group. It is an unfortunate part of having people who are passionate about their breed, and what they feel is best. I would work to give everyone an equal voice, while tempering the name-calling and bullying that has occurred previously. This can be accomplished if done in tactful manner. I feel that there are many valid opinions in the Breed Group, and they deserve to be heard.

I would like to thank TICA and the Board of Directors the opportunity to be able to further promote TICA, and the Siberian Breed.

Kris Hirst

Sibano and Belaya Siberians

122 Lake Marian Rd. Carpentersville, Illinois 60110

847 710-1056

Dear TICA Board of Directors,

Please find below my experience and qualifications for the position of Siberian Breed Committee Member for the current term. As a Siberian Breed Committee member, I will bring knowledge of breed history, a clear understanding of the written TICA standard, and experience in showing cats bred to the TICA standard.

Allow me to introduce myself. My name is Kris Hirst. I live in Illinois, USA located in the Great Lakes Region of TICA. As a Siberian Breed Committee member, I hope to promote an environment conducive to the exchange of ideas from all section members. Our goal should be for Siberian exhibitors to present a representative of the breed that meets or exceeds the TICA standard. We as a group need to come together so we can present consistent type for confirmation by our esteemed judges.

I have had the privileged to breed Siberian Cats for over 16 years. When I brought home my first cat there were only 6 breeders in the US. We as a breed have come very far in a short time. I exported the first Siberians to Australia and England. I have sent Breeding/Show cats to Canada, Japan, Mexico and to Russia. I've spent many years promoting relationships with breeders all over the world through buying, selling, and trading lines to expand the gene pool here in the USA and other countries.

During the past 16 years, I've served the breed in many ways. I was elected TAIGA President serving 3 terms. TAIGA is the oldest and largest USA Based Siberian Breed Club. As president I was required to sit on all committees. In 2005 I developed and implemented a TAIGA List Rules of Conduct for the TAIGA Yahoo group list. These rules outlined requirements, and decorum for online posting behavior. Moderators were elected by the group to act as overseers to keep the list respectful. As President I organized and hosted 2 Annual banquets for the presentation of the TAIGA awards given to Siberians shown in USA registries. In addition to serving TAIGA, I have offered my experience to new and old breeders who need mentoring. I do not require that they purchase cats from me. My mentor program consists of a community of Siberian breeders who, with accumulative knowledge help each other in line selection, animal husbandry, cattery management, and always promoting the importance of showing their breeding stock for confirmation of type. I've personally shown over 30 cats and kittens in the past 12 years. I've had the privilege of showing my breeding to International winners and have had over 5 cats and kittens as regional winners. I started and wrote the bylaws for The Natural Cat Club, have been a member of GLACE, and The Buckeye Ohio Rollers. I enjoy helping with show set up, organizing vendors, and have served as show manager for the Buckeye Indy show 2008. In 2007-2008 show season, I received a special award from the Great Lakes Region called the Monforte award. This award is given to the exhibitor that is eager and willing to help no matter what the task. Little did they know it was my pleasure. None of these tasks have been work, but a labor of love for the breed and the cat fancy.

I would consider it a privilege to serve on, and to perform the duties of a TICA Siberian Committee member. Submitted previously, you will find my application for Breed Committee, fee and TICA membership to 2015. I have always and will continue to support TICA. I have earned the respect of many TICA members as a breeder of integrity, both in the Show halls and in my personal treatment of the public. I have been committed to the efforts of TICA since 1999, when my membership began. I thank you for your consideration.

Respectfully,

Kris Hirst
Sibano and Belaya Siberians

Amend By-Laws Article 5
(Allow officers from another association to run for breed committee)
(Board Directive)

Work Item Description:

- Clarify wording so that it is clear that officers from another association can run for Breed Committees as there is some concern the rules has been incorrectly interpreted
- The rule as written does not let an officer of another similar association serve as an elected officer of TICA.
- Consider the impact if someone on our breed committee is also on the breed committee of another registering body.
- Consider the impact if someone is the chair of a breed committee in TICA and also the chair of the same breed committee in another registering body.
- Consider that the EO has no easy way to identify if someone is an officer in another association.
- The key issue is what constitutes an elected official – are Breed Chairs really an elected official?

Rationale:

This wording change would allow the election of Breed Secretaries/Committee members and judges to TICA Breed Committees but it would prevent Regional Directors/Presidents/Vice Presidents etc from serving. In addition, 15.5.1 would prevent that officer from holding the Chair position on the Breed Committee. Many of our breed committees do not elect a full complement and therefore the Breed Committee remains inactive. Allowing breed committee officers and judges from other associations who meet the requirements to run for Breed Committee in all other ways (ie they are a member etc) to participate in the election broadens the potential list of candidates. These people have already proven they have an active interest in the breed and are TICA members. As TICA members they should have the same rights as all other TICA member.

Amendment:

ARTICLE FIVE: *Elected ~~Officers~~ Officials*

15.1 Elected Officers

15.1.1 Board of Directors. The Board of Directors shall be comprised of a President, a Vice President and Regional Directors. No member of the Board of Directors, or any of its committees, with the exception of the President, or the Vice President, when acting as President, shall be authorized to take any action, including but not limited to, entering into any contract or obligation binding TICA, speaking for the Board of Directors, or stating the policy of TICA, unless the Board of Directors has specifically authorized such action by an individual member. The President, and the Vice President, when acting as President, is authorized to take any action on behalf of the Association necessary to conduct the day-to-day operations of the Association. The President is the official spokesperson for the Association. This does not apply to Board Members or other officials whose duties are outlined in the By-Laws.

15.1.2 International Officers.

15.1.2.1 The President and Vice President shall be elected by the membership at large to serve a term of 3 years or until a successor is duly elected.

15.1.2.2 If the President should be absent, incapacitated or refuse to act, the Vice President shall assume the duties of the President. If for any reason the office of President shall become vacant, the Vice President shall succeed to the office of President for the balance of the unexpired term.

15.1.2.3 If for any reason the office of Vice President shall become vacant, the Board shall elect a new Vice President from its members for the balance of the unexpired term.

15.1.3 Regional Directors.

15.1.3.1 The Regional Directors shall be elected by the members of the Region where the Director resides to serve a term of 3 years or until a successor is duly elected.

15.1.3.2 If for any reason the office of Regional Director shall become vacant, the Board of Directors shall appoint a qualified member from the Region to assume the office for the balance of the unexpired term.

15.2 Elected Breed/Breed Group Committees.

~~15.4 Breed/Breed Group Committee.~~

15.2.1 The members of each Breed/Breed Group Section shall elect a Breed Committee, each member to serve a term of 3 years or until a successor is duly elected or appointed in the event of a vacancy.

105.2.1 *Breed Committees. The number of breed Committee members shall be determined by the number of Breed Section Members as of April 30th of the election year as extracted from the membership program. The following formula will be applied:*

Under 75 Breed Section Members: 3 Committee Members

75-150 Breed Section Members: 5 Committee Members

Over 150 Breed Section Members: 7 Committee Members

105.2.2 *The filing fee for election to Breed Committees is \$10.*

15.2.1.1 The number of Breed/Breed Group Committee members shall be determined as set forth in the Standing Rules and may be increased or decreased based on the number of Breed/Breed Group Section members and the needs of the Breed/Breed Group Section.

15.2.1.2 The Breed/Breed Group Committee member receiving the highest number of votes shall become the Breed/Breed Group Committee Chairperson.

15.2.1.2.1 In the event of a two-way tie, the two receiving the highest number of votes may serve as co-chairpersons, OR may determine between themselves the chairperson OR may request a run-off. It shall be the responsibility of the two concerned to advise the Executive Office which option they are exercising.

15.2.1.2.2 In the event of a three-way or greater tie, a run-off election shall be held to determine the chairperson.

15.2.1.3 If for any reason the Breed Committee Chair is vacated, the Breed Committee member who received the next highest number of votes shall become the Breed Committee Chair. The vacant seat on the Breed Committee shall be filled with the Breed Section member who received the next highest number of votes. If all members who ran in the election for Breed Committee are already serving, the Breed Committee may complete the term with a vacant seat(s) or request that the vacancy be filled by appointment of the Board of Directors.

The Breed Committee shall notify the Executive Office of any such changes. Notices of Breed Committee resignations and replacements shall be published in the TICA TREND.

15.2.2 Qualifications for Election to a Breed/Breed Group Committee. Candidates for election to a Breed/Breed Group Committee shall provide documentation of having met the following requirements for election:

15.2.2.1 Have met the eligibility requirement(s) to vote in any TICA election (See By-Laws 113.1).

15.2.2.2 Have met the requirements for Breed/Breed Group Section membership (See By-Laws 14.1)

Pros:

- Increase the pool that Breed Committee members can be elected from with actively interested breeders.
- For new breeds transferring into TICA, provide continuity for the breed in both associations.
- For existing breeds, maintain consistency in standards as appropriate.
- Involves said officer more directly in TICA & may helps them decide to become more involved with TICA

Cons:

- Potentially permits an undue influence over TICA standards.
- Potentially opens breed committees to hostile takeovers, but that may be dealt with by requiring a 6 month membership in the *breed section* as well as in TICA prior to voting for breed committee.

Amend By-Laws Article 5
(Allow officers from another association to run for Breed Committee)
(Board Directive) cont

Rules Committee Comments:

(AB) Breeders talk across organizational lines a lot and our standards are similar and in many cases cats from one association compete equally as well in the other.

(AB) Part of filing for Breed Committee could involve making a statement about one's involvement in similar positions in another association. If we wanted to do that then we would need to amend the rule to add that requirement.

(EC) In my opinion elected officials refer to board members/prez and vp, not breed committee members/chairs.

(SA CB) Potentially opens breed committees to hostile takeovers, but that may be dealt with by requiring a 6 month membership in the *breed section* as well as in TICA prior to voting for breed committee.

(BT) I am in agreement with 6 months of membership and breed section prior to being able to vote.

(CB) But I do think it matters very much who is eligible to *vote* for breed committee members. This *is* relevant to the current discussion. In our rationale for amending By-Laws 15.5 we can point out that the issue of a 6 month wait for voting in each breed section is the best way to address this. Therefore, we would recommend in favor of allowing officers from other associations to serve.

(EC) I am in agreement with 6 months of membership and breed section prior to being able to vote.

(CL) I agree with changing the name for Article 5 from "Elected Officers" to "Elected Officials" and separate the Article in 2 big areas: Elected Officers (international officers and RDs) and Breed/Breed Group Committee. In this way Breed Committee members and chair wouldn't be consider Officers allowing officers from another association to run for breed committee.

Amend By-Law 117.1.4 & Registration Rule 33.6.2
(Eligibility for showing PNB cats)
(Parkinson & Tullo)

Work Item Description:

- PNB -- resolve conflict between Registration Rule 33.6.2 & By-Law 117.1.4 (from 2012 Winter mtg)
- By-Law 117.1.4 says changes to the Registration Rules that affect how a cat may be shown shall take effect May 1 of the following year while 33.6.2 says any PNB cat/kitten with a registration number can be shown in PNB. So, if a new breed were advanced at the Annual in September under By-Law 117.1.4 it could not be shown until May 1 of the following year but these cats would have registration numbers so according to 33.6.2 they could be shown immediately upon acceptance.
- Identify a way of allowing PNB/ANB to be shown as soon as possible after the advancement was approved and not have to wait until the next 1 May. That impacts By-Laws, possibly the Reg Rules and Show Rules and also Standing Rules 203.1.

Rationale:

PNB and ANB cats are not scored or titled, so there is no reason to have to wait until May 1 to begin showing.

Amendments:

Amend Bylaw 117.1.4 Effective date

Amendments to Registration Rules shall take effect immediately unless the proposal itself provides another effective date. Any changes in the Registration Rules which will affect the way a cat may be shown shall take effect May 1 of the ensuing year. Amendments to Show Rules shall take effect May 1 of the ensuing year, unless the proposal itself provides another effective date. **The May 1 restrictions do not apply for breeds advancing to PNB or ANB status.**

Amend associated Standing Rules:

203.1 Any change in the Standing Rules which will affect the way a cat may be shown will become effective May 1st of ensuing year. **The May 1 restrictions do not apply for breeds advancing to PNB or ANB status.**

303.4 Advancements ~~from Registration Only to Preliminary New Breed, from Preliminary New Breed to Advanced New Breed~~, from Advanced New Breed to Championship or from New Traits to Championship shall take effect on May 1 of the ensuing year.

If By-Law 117.1.4 change passes, then we will also need to add Standing Rules:

There are two options – as opinion on the committee was divided between immediate advancement and specifying a waiting period to minimize the impact on show teams.

Option 1: Add:

303.6.2.1 Having met the requirements for and upon advancement to Preliminary New Breed (PNB) status, a cat in PNB may be shown immediately upon advancement by the Board.

303.7.3.1 Having met the requirements for and upon advancement to Advanced New Breed (ANB) status, a cat in ANB may be shown immediately upon advancement by the Board.

Option 2: Add:

303.4.1 Advancements from Registration Only to Preliminary New Breed, and from Preliminary New Breed to Advanced New Breed shall take effect from Jan 1 (if passed at the Annual Meeting), from May 1 (if passed at the Winter Meeting) or from Sep 1 (if passed at the Spring Meeting).

Pros:

- Streamlines the process for moving through the New Breed process
- Cats with Registration Only status could be entered for EX Only & transferred to PNB if they are advanced
- If a big class were presented & advanced it's good for judges & breeders to see those cats in the rings.

Cons:

- Difficult to upgrade the entry clerking programs to handle the change from one category to another and changes would have to be manual until such time as the entry programs were upgraded

- Official standards won't be available immediately for breeds advancing from Registration Only to PNB

Amend By-Law 117.1.4 & Registration Rule 33.6.2
(Eligibility for showing PNB cats)
(Board Directive) cont ...

Rules Committee Comments:

(MW) The apparent conflict here is resolved by the fact that the By-laws take precedence if they are in conflict with other rules.

(EC) My only comment to this is that going from Reg. Only to PNB, the judges will not have the approved standard. I believe that Laurie suggested that there be a slight delay to allow entry programs to be updated and standards to be issued.

(VF) The board can set a date depending on whatever current factors exist and timing. There are not many PNB cats entered in a show at any one time.

(EC) I think that if we are going to institute a waiting period, then we should just leave it as it has always been. ... Seems like any entry clerk who was on top of things would just print out a page with the appropriate cats on it that might be transferred to PNB - transfers to ANB aren't the same problem.

(EC) I guess I'm of the "if it isn't broken, don't fix it" camp - I am not in favor.

(CB) I actually think we should let new breeds show about one week after the board meeting at which they advanced. That is, they should be able to enter in the next show that is still open for entries.

(BT) I am in favor of the PNB and ANB cats being able to be shown immediately upon acceptance or advancement. I don't think that there are any issues that can't easily be overcome by letting them show immediately. The main concern seems to be with the RO to PNB..if the cats are in the catalog as exhibition only they can transfer to PNB class....and we always encourage breeders to come prepared with standards.....there should be a standard in the application and it can always be copied and given to any judges judging the show if the advancement comes at a meeting with a show attached.

(AB) Agree with Bobbie. There is great value in judges being able to see multiple cats of a new breed. Too often we only see one or maybe 2 of a new breed at any one time which does not give you a lot to compare and think about so when there is an opportunity to have multiple cats in the class we should use it to help ourselves learn more about the new breed.

(MW) The Entry Clerk group have been discussing this issue of advancing New Breeds immediately, after a heads-up from Fran Green. Some didn't want to wait, some felt that breeds should wait and there was worry around the Annual (eg, suppose 20 cats entered as exhibition only, anticipating advancement, and the show fills to 500 cats in competition - how would that be handled?)

Amend Show Rule Article 12
(Prizes and Trophies, Ribbons and Rosettes)
(Tullo & Lopez)

Work Item Description:

- Extend to HHP adult class the number of rosettes awarded equal to the number of HHP competing up to a maximum of 10.

Rationale:

To extend the Adult HHP awards to top 10, the same as the HHP Kitten awards will allow for more placement in a class that is often the first introduction new or junior exhibitors may have to showing cats.

Amendment:

212.3 If there are FEWER THAN 10 cats, kittens **or** alters **or household pets** competing, judges in either allbreed or specialty rings shall present the top five. However, if there are fewer than five entries in any class, the club is required to provide rosettes for the number of entries competing.

212.4 Number of Rosettes Awarded

212.4.1 Household Pet **Adults and Household Pet Kittens** - The number of rosettes awarded in the HHP **adult class and HHP** kitten class shall be equal to the number of **cats** competing up to a maximum of 10.

212.4.2 Top 5 Format - 20 or Fewer Cats Present: When 20 or fewer cats, kittens **or** alters **or household pets** are present, the judge shall award Best through Fifth Best final awards.

212.4.3 Top 6 to 9 Format - 21 to 24 Cats Present: When 21 to 24 cats, kittens, alters or household pets or household pet kittens are present, the judge shall award final awards as follows:

When 21 cats are present, Best through 6th Best, except HHP **Adults and HHP** Kittens, See 212.4.1.

When 22 cats are present, Best through 7th Best, except HHP **Adults and HHP** Kittens, See 212.4.1.

When 23 cats are present, Best through 8th Best, except HHP **Adults and HHP** Kittens, See 212.4.1.

When 24 cats are present, Best through 9th Best, except HHP **Adults and HHP** Kittens, See 212.4.1.

212.4.4 Top 10 Format – 25 or more Cats Present: When 25 or more cats, kittens, alters or household pets or household pet kittens are present, the judge shall award Best through 10th Best final awards.

Pros:

- Potentially increases entries to shows
- Encourages new exhibitors and junior exhibitors who enter the cat fancy through the HHP class

Cons:

- Increases the number of rosettes needed thereby increasing costs to clubs
- Handing out rosettes just because cats are there is meaningless

Amend Show Rule Article 12
(Prizes and Trophies, Ribbons and Rosettes)
(Tullo & Lopez)

Rules Committee Comments:

(EC) I don't support this - I don't think that it will increase entries, and giving out more finals for cats that aren't really deserving doesn't mean anything.

(EC) I don't see this as getting us more entries - we used to have substantial HHP classes in this region, but loss of exhibitors to health problems and the economic downturn have really hurt. I'm not sure that awarding 5 more places gains us anything. I wasn't in favor of doing it in HHPK either. We talk at length about how HHP are EQUAL in TICA - but somehow now they are "more equal"

(AB) Agree with Ellen. Cat shows are meant to be competitions. If everyone gets a prize just for showing up, it ceases to be a competition. If the prize itself is meaningless then I think we turn people off rather than encouraging them.

(BT) Our HHPs are shown for the love of the cat more than any other class - the cats are not breeders or retired breeders and in many cases are cats that have been rescued or are with a rescue and in need of a new home. The criteria for showing them is spay/neuter and a happy healthy well adjusted cat. We award top 10 to the HHP Kittens if there are 10 competing and I have long felt we should do the same for the adults. I think this was proposed years ago and the argument against it was the additional cost to clubs buying rosettes. I don't think that argument holds up now with so many clubs using the single rosette and tab award system.

Amend Show Rules Article 2 (Shows) (Parris & Tullo)

Work Item Description:

- Delete Show Rules and Standing Rules below

Rationale:

Increase the flexibility of show formats.

Amendment:

Delete Show Rules:

~~22.3.1 The maximum number of entries a club may accept is limited as follows:~~

~~22.3.1.1 Alternative Format - 125 entries. (See Show Rule 21.16.)~~

~~22.3.1.2 Back-to-Back Format - 250 entries. (See Show Rule 21.14.)~~

~~22.3.1.3 Split Format (2-day Show) - 500 entries. (See Show Rule 21.15 and Show Rule 216.4.)~~

Delete Standing Rules:

~~202.2 Maximum number of times any single cat may be judged on any show weekend is as follows:~~

~~202.2.1 One-Day Alternative Format shows may have up to five rings in the morning and five in the afternoon for a weekend maximum total of 10 rings including Congresses. A 1-day alternative format show may not be combined with any other format.~~

~~202.2.2 Two-Day Alternative Format shows may have four rings in the morning and four rings in the afternoon for a daily total of eight rings and a weekend total of sixteen rings including Congresses. Two-day alternative format shows may not be combined with any other format.~~

~~202.2.2.1 In non-isolated areas a judge may not judge more than two Alternative Format shows on the same weekend, except in cases of emergency whereby a contracted judge has canceled and a new (i.e. different) judge cannot be contracted.~~

~~202.2.3 At Back-to-Back Shows or Split Format (2-Day) Shows any single cat may be judged not more than eight times per day, including any Congresses. The maximum number of times a cat may be judged in a show weekend is twenty.~~

~~202.2.4 Examples of allowable ring combinations are:~~

~~202.2.4.1 Four rings on Friday with eight on Saturday and eight on Sunday — Each cat judged 20 times but not more than eight times per day.~~

~~202.2.4.2 Six rings on Friday with seven on Saturday and seven on Sunday — Each cat judged 20 times but not more than eight times per day.~~

~~202.2.4.3 Eight rings on Saturday and eight on Sunday — Each day has the maximum of eight times so the total for the weekend can only be sixteen.~~

~~202.2.4.4 Four rings on Friday, seven rings on Saturday plus a Senior Congress and a Junior Congress,~~

Amend Show Rules Article 2
(Shows)
(Parris & Tullo) cont

~~and seven rings on Sunday plus a Male Congress and a Female Congress. The congresses are on different days and any single cat will only be in one congress per day thus will only be judged a maximum of eight times per day and twenty times that weekend.~~

~~202.2.5 Shows in non-isolated areas that have been advertised as back-to-back, 2-day or split format, may not change to Alternative Format.~~

Rationale:

Show Rule 216.3 covers how many cats a judge can handle a day.

(216.3 A judge may not judge or handle more than 250 cats in 1 day regardless of format, and no more than 500 cats in a 2-day show)

Amendment: Add Standing Rule 2016.3

2016.3 The maximum number of times a cat may be judged in a show weekend is twenty.

Pros:

- Increases flexibility of show formats

Cons:

- Potential confusion around multiple formats which may or may not be documented

Amend Judging Program Article 16
(Penalties for Failing to Fulfill Judging Requirements)
(Board Directive)

Work Item Description:

- Review the current fine structure and make a recommendation on increasing them so they become an effective motivator for fulfilling all requirements
- Many judges were late meeting their renewals
- Note: Subsequent investigation showed that in fact the delinquency list itself was inaccurate and that many of the judges on it had in fact met their obligations.

Rationale:

The list of delinquencies was high and so we need to find a way to motivate judges to meet their judging requirements in a timely manner. Anyone can miss a single date and the real intent is to get at the repeat offenders. Therefore leave the first offence at the same level but increase the fines for repeat offenders.

Amendment:

416.3.2 Penalties:

416.3.2.1 First offense - \$25 fine and letter of reprimand from the Judging Administrator.

416.3.2.2 Second offense (within any 12 month period) - ~~\$50~~ **\$75** fine.

416.3.2.3 Further offenses - may include, but are not limited to, fine of not less than **\$100**, suspension, demotion or any other penalty, except that an Approved Allbreed Judge may not be demoted without a hearing.

Pros:

- Minimize repeat offenders

Cons:

- There are not many repeat offenders
- The original list was inaccurate and therefore we are making a decision on incorrect information.

Amend Judging Program Article 16
(Penalties for Failing to Fulfill Judging Requirements)
(Board Directive)

Rules Committee Comments:

(KV) I don't think we should change the current rule. I believe that ALL judges really know when they shall pay their membership-fees, on the TICA-Judges-List there are enough reminders, also in the Judges Newsletter. If some judges are late and late again - well, then they should pay the fines. As I wrote before, you only can raise the fines if also Judges Fees are raised!

(BT) I would agree with Kurt's comments....

(AB) I agree with Kurt and Bobbie that I don't think we need to change the rule for first time offenders however I could see raising the fines for repeat offenders. The impact of a fine only happens if it is at a level to inhibit the behavior and if we have repeat offenders then the fine isn't high enough (or there is something else happening that makes paying the fine the better route). And unlike Kurt I don't think that if we raise the fines, we should raise the judging fees—the whole point is to make it costly and painful to be a repeat offender.

(JA—ML) I don't think this is something that needs any attention. We obviously had a problem with tracking fees & dues for judges this year and hopefully the EO will do a better job this season!

(EC) We have escalating fines for repeat offenders - my big question was HOW MANY were there this year in comparison to other years. At the meeting it appeared like there were a lot - but there was some confusion in the EO.

(SA) I think that is correct. From what I understand, the majority of the issues with late judge's fees were record keeping.
Susan

Amend Judging Program to Add Article 19
(Household Pet Judging Program)
(Fisher)

Work Item Description:

- The issue of HHP judges keeps coming up as we get more and more interest from developing areas. Since there are fewer pedigreed cats, many folks think about creating interest in cats through the HHP's.
- In the U.S., I keep thinking about us becoming more involved in 4-H and there are a bunch of HHP judging opportunities there.
- See attached PDF for the description of the previous HHP Judging Program

Rationale:

Reinstate the Licensing of HHP Judges to address the need in developing areas and in non-traditional organizations like 4-H.

Amendment:

ARTICLE NINETEEN - Household Pet Judging Program

419.1 Names of applicants MUST be published in two issues of the TREND. Notices must be received by the Judging Administrator by April 15th for application at the Annual, August 15 for application at the Winter Meeting, or December 15 for application at the Spring Meeting. Notices must be sent to the Judging Administrator. The Judging Administrator will then place the notices in the TREND. TICA members shall be invited to send comments, favorable and/or unfavorable, to the Judging Administrator/Designee and to the applicant's Regional Director.

419.2 Anyone may apply for acceptance into the TICA Household Pet (HHP) Judging Program who has the following qualifications:

419.2.1 18 years of age or older.

419.2.2 A member in good standing of TICA for 2 years.

419.2.3 A working member of an active TICA club which hosts TICA shows annually.

419.2.4 Owned and shown at least one cat in a minimum of 8 TICA shows within the 2 years prior to application. Show experience in other associations may be taken into consideration by the Judging Administrator.

419.2.5 Sponsored by a TICA club and a licensed TICA Approved Allbreed judge.

419.2.6 Ring Clerked a minimum of 2 times and Master Clerked at least one time and successfully completed both the Head Ring Clerk and Master Clerk exams.

419.2.6 Served at least once as a TICA entry clerk prior to application.

419.2.7 Furnish a professional 4x6 color photograph for the TICA yearbook with the application packet.

419.2.8 Must be familiar with and agree to abide by the TICA By-Laws, TICA Show Rules, TICA Registration Rules, TICA Standards and Code of Ethics.

419.2.9 Applicant must submit documentation supporting fulfillment of all requirements.

419.3 Applicant must send a \$30 application fee to the Executive Office. The original application with verifying copies must be sent to the Judging Administrator/Designee.

419.4 Applicant must be approved by the Board and pass the open book TICA HHP Examination with a passing grade of 95 percent correct answers. The examination must be completed and returned to the Judging Administrator/Designee no later than 6 months from the date of receipt of the examination by the applicant. If the applicant should fail the examination, s/he may reapply. Applicant may not begin training until the examination is passed.

419.5 Upon acceptance into the HHP Judging Program, the applicant must submit the HHP Monthly Report to the Trainee Coordinator each month. HHP Trainees must earn 2 CEU's annually, take the annual Refresher Test and complete the annual Judge's Record Form.

419.6 HHP trainees must attend one TICA judging school, breed seminar, or genetics seminar within the year following the date of acceptance as an applicant (more are encouraged).

419.7 With written permission of the show management and the officiating judge, anyone participating in the HHP Judging Program is encouraged to handle Household Pets as a training session for the purpose of gaining more knowledge. HHP Permission to Train Forms and HHP Trainee Evaluation forms may be obtained from the Judging Administrator/Designee.

419.8 Working under the direction of three TICA Approved Allbreed Judges, Licensed Ring Instructors, or Approved Household Pet Judges, HHP trainees must handle the HHP's as directed by the training judge for a minimum of eight different ring training sessions. Emphasis is placed on:

419.8.1 Procedure (handling, taking the cats out of the judging cages, mechanics and finals presentation).

419.8.2 Technique (disinfecting/sanitizing hands and judging table between cats, marking judge's books, hanging ribbons, establishing a method of noting cats to be considered for finals).

419.8.3 Establishing a routine (for example, starting with the head and working back, or starting with the tail and working forward).

419.8.4 Examination of the cat:

419.8.4.1 Check for clipped claws (all four feet).

419.8.4.2 Check for clean ears (both ears).

419.8.4.3 Check coat for cleanliness, fleas and grooming.

419.8.4.4 Check stomach for same.

419.8.4.5 Observe color markings.

419.8.4.6 Check eyes for cleanliness, clearness and third eyelid being up.

419.8.4.7 Check for over-all balance and condition.

419.8.4.8 Observe for disposition.

419.8.4.9 Look at face.

419.8.5 The HHP trainee will judge the cat, mark the judge's book and finals sheets and hang ribbons.

419.8.6 The training judge shall complete the HHP trainee's evaluation form and return it to the HHP trainee in a self-addressed stamped envelope, provided by the trainee, who shall make a copy of the evaluation for his/her files and then forward the original report to the Judging Administrator/Designee

immediately after the show. The HHP trainee shall also furnish his/her Allbreed Sponsor with a copy of each evaluation.

419.8.6 An additional solo judging is required. This is to be done under the direction of an Approved Allbreed Judge or Licensed Ring Instructor and is to consist of at least 10 longhair cats and at least 10 shorthair cats; longhair and shorthair cats shall be judged separately.

419.8.6.1 The trainee is to work from a judge's book and handle cats, mark judge's book, hang all ribbons and present his/her finals.

419.8.6.2 The instructor is to make note of trainee's appearance, attitude, knowledge of color/pattern and confidence in judging.

419.8.6.3 The instructor is to fill out the solo training form and return it to the HHP trainee in a self-addressed stamped envelope, provided by the HHP trainee, who shall make a copy of the evaluation for his/her files and then forward the original report to the Judging Administrator/Designee immediately after the show. The HHP trainee shall also furnish his/her Allbreed Sponsor with a copy of the solo judging evaluation.

419.9 The HHP trainee shall apply to the Judging Administrator/Designee for licensing as a Probationary Household Pet Judge. The completed Application for Probationary Household Pet Judge Advancement Form must be sent to the Judging Administrator/Designee with copies to each Board member. Notices must be received by the Judging Administrator by April 15th for application at Annual, August 15 for application at the Winter Meeting, or December 15 for application at the Spring Meeting. Notices must be sent to the Judging Administrator.

419.10 A license fee of \$25 shall be sent to the Executive Office before advancement.

419.11 The Board shall consider the applicant's knowledge, ability, training, experience, show and club activity, personal appearance, deportment, attitude and any other factors it deems appropriate and may grant a HHP judging license, deny the applicant or require additional work.

419.12 The licensed Probationary Household Pet Judge may apply to the Judging Administrator/Designee for licensing as an Approved Household Pet Judge after s/he has judged a minimum of ten TICA HHP shows. The completed Application for Approved HHP Judge Advancement Form must be sent to the Judging Administrator/Designee with copies to each Board member. Notices must be received by the Judging Administrator by April 15th for application at Annual, August 15 for application at the Winter Meeting, or December 15 for application at the Spring Meeting.

419.13 A license fee of \$25 shall be sent to the Executive Office before advancement.

419.14 The Board shall consider the applicant's knowledge, ability, training, experience, show and club activity, personal appearance, deportment, attitude and any other factors it deems appropriate and may approve the applicant for advancement, deny the applicant or require additional work.

419.15 The provisions of the Championship Judging Program relating to the publication of names of those applying for admission and advancements, leave of absence, continuing education, requirements for annual renewal of judging license, penalties for failure to fulfill judging requirements, etc., also apply to those in the HHP Judging Program. Please refer to the appropriate section of this program for information on these items.

419.16 The Board of Directors may accept the transfer of Licensed HHP judges from other cat associations within the following requirements:

419.16.1 Names of applicants MUST be published in two issues of the TREND. Notices must be received by the Judging Administrator by April 15th for application at the Annual, August 15 for application at the Winter Meeting, or December 15 for application at the Spring Meeting. Notices must be sent to the Judging Administrator. The Judging Administrator will then place the notices in the TREND. TICA members shall be invited to send comments, favorable and/or unfavorable, to the Judging Administrator/Designee and to the applicant's Regional Director.

- 419.16.2 Must be a member of TICA in good standing at the time of application and a working member of an active TICA club.
- 419.16.3 Successfully complete the Head Ring Clerk and Master Clerk exams.
- 419.16.4 Must have an Approved Allbreed Judge for a sponsor
- 419.16.5 Successfully complete the applicant examination
- 419.16.6 Successful complete of a training program created for the applicant, based upon the Judging Administrators judgment and assessment of current level of skills and ability.

Pros:

- Provides a judging pool for developing areas where there is a higher percentage of HHPs than pedigree cats which helps them reduce the costs of putting on shows
- Provides a judging pool for outreach programs to help grow the cat fancy, for example 4-H

Cons:

- Previous participants in the HHP Judging Program did not see the opportunities to judge

Amend Judging Program to Add Article 18
(Household Pet Judging Program)
(Fisher)

Rules Committee Comments:

(EC) I am not in favor of changing the judging program yet again. The HHP program died because we trained judges for jobs that were not there. There were very few stand alone HHP shows, and regular TICA shows did not hire HHP judges, since they had other judges who judged all the cats, including HHPs. With the high cost of travel, I can't see clubs bringing in a HHP judge - it is just an additional expense.

74.2.2 One tabby variation seen is the golden. Golden are shaded tabbies, *regardless of degree of expression of the wideband gene*, showing a preponderance of the ground color rather than the marking color. Golden come in all of the basic colors *in all tabby and torbie patterns* ~~in the shaded or chinchilla pattern, including shaded or chinchilla golden torbies.~~ A high degree of rufousing giving apricot or golden tones to the undercoat is considered desirable. Golden are genetically agouti (A/-), ~~with any underlying tabby pattern~~, with a high degree of rufousing polygenes. Shaded and chinchilla golden are characterized by ~~and~~ wideband (Wb/-) polygenes which “erase” the underlying tabby pattern, leaving the basic color only on the tips of the hair shafts. The chinchilla pattern is the most extreme expression of the wideband gene. Golden compete in a separate color class within the tabby division.

Rationale: There are many cats that are, in fact, not shaded or chinchilla golden tabbies/torbies, but patterned golden tabbies/torbies (i.e. classic, mackerel, etc.). It is time that we allowed these cats to be registered and shown correctly. In the past patterned golden were registered and shown until the UCD was amended in the early 2000s (for whatever reason).

In 2009 when programming was done for the 32-color divisions, golden patterned tabbies were programmed in as future colors, so there will be no new programming requirements. A partial page of the master code is included for reference.

Thai Breed Report for the TICA 2012 Annual Meeting Summary of Our Second Year in Championship

Page 1 of 2

Prepared by:
Cristy Bird, Dr.P.H.
Chair, TICA Thai Breed Committee
June 29, 2012

I. Background.

The TICA Board of Directors granted championship status to the Thai breed at the Winter Meeting in January, 2010. Our first show season in championship began May 1, 2010 and ended April 30, 2011. **Our second show season began May 1, 2011 and ended April 30, 2012.** This is the second of three annual breed reports required after a new breed is granted championship. See Registration Rules 33.8.15.

II. Cats Registered.

Each year a new championship breed must register at least 25 cats. In the 2011-2012 season, at least 112 Thais were registered in TICA. The Thai breed has exceeded the requirement for cats registered. See attached file from the Executive Office (**thai_registration_list.xlsx**).

III. Cats Shown.

Each year a new championship breed must show at least 10 unique cats in at least 3 regions. According to data from the Executive Office, at least 68 Thais were shown during the 2011-2012 show season across three classes. Of these, 44 Thais were registered, unique individual cats. Most of the unregistered Thais were from South America or Russia.

Thais were shown in ten regions: EN, ES, EW, GL, MA, MP, NE, SC, SE, and SW.

I am attaching a list of the cats shown (**Thai_shown2.xlsx**). It is the file provided by Lesley Hart from the Executive Office, but it has been edited to remove duplicate listings. Most of the cats listed were shown at more than one show. I also added cats shown from May 1, 2011 through September 2011 (which were not in Lesley's file for some reason). Cats added also include Thais shown at the Westcats show in Somerset, U.K., February 4-5, 2012. For some reason, that entire show was missing from Lesley's data and from the online show reports. **We are happy to report that we now have a number of Thai fanciers active in the EW region.**

We conclude that the Thai breed has exceeded the requirements for showing this past show season.

IV. Number of active Thai breeders.

The table below lists the breeders who are **current** members of TICA, of the Thai breed section, and have either registered a litter of Thai kittens with TICA during the past 2 years or are about to register a litter of Thai kittens with TICA. This information was based on consultation with the breeders and on a report from Lesley Hart of the Executive Office received 06/22/2012.

See table on page 2.

Active Thai Breeders and Recent TICA Litter Registrations			
Name	Thai Litter#	TICA Cattery Name	TICA Region
1. Alice Billman	03P 122811	Alicats	GL
2. Cristy Bird	03P 111711	Sarsenstone	SW
3. Robert Crawford	SBP 052010 (reg 7/6/2011)	Siamxpress	NE
4. Nancy Day	SBP 090711	Stonearch	GL
5. Frank Diegmann & Beverly Loo	SBP 032012	Marveloo	SW
6. Sandra Engle	SBP 110611	Sandypoints	MA
7. Cynthia Hopper	SBP 012012	Wicca	EW
8. Carmelita Mares	SBP 032812	Diabrillante	SW
9. Rodrigo Mendivil	03P 062211	Diplomaat	SA
10. Connie McCarthy	SBP 061711	Archenland	SW
11. Karen Mordecai	03P 103111	Spottydreams	EW
12. Beatrix Rahn	SBP 110610	Falkenhoehe	EN
13. Brigitte Sierck	SBP 031511	Lasjoyasthai	EN
14. Seline M. Smith	03P 061211	Thaitails	MA
15. Nancy Stuck	SBP 120611	-----	MA
16. Marilyn Tennyson	SBP 111311	Cloudcity	SW
17. Marjorie Tennyson	SBP 072511	Blackfootriver	NW
18. Jenni Toivoniemi	03P 011012	Pienpeto	EN

According to RR 33.8.15, we are required to maintain at least 5 active breeders in at least 3 regions. We have 18 active breeders in 8 regions. We have expanded the number of regions with active breeders compared to previous years, with for the first time members and breeders in the EW region. Some additional breeders did not qualify for the list above because they did not keep their memberships up to date, though they did register litters and show cats. We have met the requirements for active breeders during the past year.

V. Conclusion.

In the second year in championship, the Thai breed has more than met the requirements for maintaining championship status. Compared to last year, we have expanded the number of regions where Thais are bred and shown.

The Highlander Breed Group Report: 2011-2012

The Highlander has been a PNB since 2008. We have been in process of building our breed group and gaining new members that are interested in promoting and showing the Highlanders. Our breed section membership has grown to 16 in 2011 from only ten in 2010. We are excited as we continue to work with the breed section members and unite in our efforts to breed to the standard and promote the Highlanders in as many regions as possible.

The Highlanders were also presented on Cats 101, Animal Planet this past May, the segment was filmed last summer in New York. This exposure has been positive in many aspects introducing them to more people all over the United States and other countries as well.

Highlander Litter Registrations

In 2011 there were 54 HG Highlander litters registered this number is up from 32 litters in 2010. We are seeing nice growth and a renewed desire for the advancement of the Highlander breed.

Individual Highlander Registrations

In 2011 there was a total of 60 HG/HGS cats registered, this number is up from 31 in 2010. We are seeing a continued improvement in the registration numbers of the Highlanders as new pet owners are registering their kittens with TICA. We are also seeing a continued desire with the breeders to strive to meet the standard and the quality of the cats being produced is very desirable.

Highlanders in the Show Hall

We have had five unique Highlanders shown in five different shows and three different regions. The five cats were from two different catteries. This is an improvement as we are gaining interest from TICA and non members to present their cats at local shows in their areas. With this we are encouraging non members to join TICA and our Breed Section Group so we can work and grow together.

Summary

With continued enthusiasm for the Highlander breed and more people becoming interested in the Highlanders we are looking forward to another year of growth and adventure as we see our cats in more shows and present them to as many judges as possible in the coming year.

TICA Khao Manee Breed Committee Report

Written and compiled by Janet Poulsen, Chrissy Russell and Jen Lacey

KHAO MANEE BREEDING POLICY

GENETICS OF THE BREED AND ADVICE FOR BREEDERS

1: Statement of purpose of the Breeding Policy & background of the breed

This breeding policy is intended to give advice and guidance to new breeders of Khao Manees as more cats are imported and kittens are bred and sold for breeding. Health will be of paramount importance, and second to that will be the objective of selecting of Khao Manees to work towards the proposed Breed Standard which defines the ideal for a showbench specimen of the breed.

It is written as a statement of best practice. However, with the breed in its infancy in western cat fancies, and for which history, legend and myth are a fairly seamless blend in its native country, it's recognised that there will have to be periodic revision as more becomes learned and understood about this white cat of Thailand. It is good that we have the support of Dr Leslie Lyons and her team at UC Davis for projects concerning white cats and deafness and breed genetic diversity.

The roots and origins of the Khao Manee are parallel (and probably intertwined) with the other historic breeds from that part of the world: the Siamese Seal Point, Korat and Burmese. The Khao Manee (also known as the Khao Plort) is one of the breeds in the famous book of cat poems (Tamra Mao) which was produced at least as far back as 1350 and is a national treasure today. The four above mentioned are the most famous of about 17 breeds listed as lucky cats and represented their country on sets of stamps produced in 1971 and 1995. It is surprising that when the other three have become well established in the west it isn't until very recently that the Khao Manee has arrived here, but it's believed it has a natural place alongside the other ancient Thai breeds and so deserves recognition and preservation.

2: Selection for breeding

Although selective breeding has just begun, it is not imagined that it will be too difficult to fix and maintain type in the Khao Manee. The head and body shape are of medium size, ears medium to slightly large and the eyes are not required to dominate the face. This is a cat of no extremes, and although the odd-eyed is most prized in its native country the decision was taken not to place emphasis on this as it could restrict a gene pool which will be small in number and only increased by importation. Lines should not be excluded to aim for a very small number of a specified eye color.

What is essential is that breeders select healthy cats as foundation stock and maintain the solid build and muscular appearance that is called for. It's known that gradual loss of size and more delicate appearance in future generations could be an indicator of inbreeding depression. Because of the small number of imports initially there will be close monitoring of this factor. Due to their early limited genetic base, the TICA Breed Committee will recommend to its breeders that the size, health and temperament should always be checked in prospective parents as the main priorities.

Selection will also be made by pedigree checks to avoid the repetition of common ancestors. A Pawpeds data base is being established, but as yet too few ancestors are known to give sufficient generations for meaningful inbreeding coefficients. However, Prof Bateson's

advice will be firmly kept in mind, "Avoid very close inbreeding. A good rule of thumb is that if the pedigrees of the potential mates include more than two (common) grandparents, avoid that mating." ("Independent Inquiry into Dog Breeding" – Sir Patrick Bateson FRS)

3: Genetic Makeup of the Breed

All cats have 19 pairs of chromosomes upon which there are many genes that govern the eventual shape, size, sex, color, pattern and hair length of the individual animal. Over the generations a number of mutations have occurred and selective breeding has been used to isolate these to produce the various pedigree breeds we see today. White which, with its geographic origin and short coat, defines the Khao Manee as a breed, would have been one of the early ones as it is found in the domestic populations throughout the world. However, unlike in other species, including people, in cats it is very rarely associated with albinism.

Like the White Persian, White British Shorthair or Foreign White the Khao Manee is a cat wearing a white overcoat. Dominant White (or correctly 'epistatic white' since it occurs on a different gene from the black or red based colors) is denoted by the gene symbol W. W cats do not have the pale blue/pink light sensitive eyes of the albino (cc), nor the nystagmus that is associated with this. Some kittens are born with a 'cap' (hairs on top of the head) of a different color, some have been born without the white overcoat, indicating that the parents are Ww, with the offspring inheriting the recessive (w) from both parents.

4: White cats and deafness

There is an established link in cats between the white coat color, blue eyes and deafness. The tapetum lucidum is generated from the same stem cells as melanocytes (pigment cells). The blue eyes of an epistatic white cat indicate a lack of tapetum. Deafness is caused by an absence of a cell layer in the inner ear that originates from these same stem cells as well. They fade out progressively in the first week or so after birth. However, although research has ascertained that more white blue eyed cats are deaf than white non-blue eyed cats, not all blue eyed cats are deaf and not all white non-blue eyed are hearing. Odd eyed cats, like some Khao Manees, may be deaf on one side (usually the side with the blue eye) but not all are.

So appearance (phenotype) is not a definite indicator of deafness. It is going to depend on genotype, the genes that the cat has inherited, and as yet the particular complex of genes governing deafness has not been identified, though work is ongoing at UC Davis and Baltimore. At present there no scientific proof to back the statement made by Sarah Hartnell in her summary on white/cat deafness research: "other types of blue eye are being discovered in all-white cats in Asia, the blue is different from Siamese Blue Eyes, but does not seem to cause deafness", it remains conjecture, but there is some anecdotal evidence from Khao Manee breeders in the west who are keeping records that the deafness is not occurring at the same frequency as it does in European originating blue eyed breeds.

White x white matings have been accepted practice in Thailand and, although the use of the non-standard colored Khao Manees is accepted in the registration policy, to ensure no exclusion of otherwise healthy cats of good type and new to the genepool, white x white is very highly advised.. Research to date (University of Baltimore, where there is an established colony of white cats, some blue eyed, others not) has shown an increased risk of deafness in the progeny if both parents are blue eyed, but not a distinction dependent on homozygosity/heterozygosity for W. So from knowledge to date the rationale for Khao Manee breeders is the premise that as dominant white is a complete dominant gene with no additive effect in its homozygous state (no proof existing that homozygous whites are more likely to be deaf than heterozygous whites) breeding white to white gives the opportunity to selectively breed to influence the polygenes against deafness, whereas random polygenes of non-white cats may skew away from the direction of the selective breeding.

Time and research results will give further information. In the meantime the proposed TICA breeding policy for the Khao Manee will advise strongly against the breeding of deaf cats.. Also this breeding policy strongly advises against the mating of blue eyed cat to blue eyed cat. A blue eyed cat may be used for breeding but should have a non-blue eyed or odd eyed partner. On what is known to date these strategies should reduce risk of deafness occurring.

Notes:

A) Careful note will be taken of new research on white cats and deafness produced by veterinary medical faculties, and this policy will be revised according to recommended best practice based on such results.

B) The TICA Khao Manee Breed Committee will keep a record of Khao Manee kittens born. It is recommended that a cat that produces deaf offspring on two occasions with different partners is no longer used for breeding (unless participating in a study directed by veterinary/genetic counselling).

5: Other issues

It is known that skin cancer may affect any cat with white ears, including domestics. Breeders will be advised to give new owners information of its possible occurrence and the necessity for the use of suitable sun block products.

As yet no other genetic problems are known to have occurred in the Khao Manee, but of course it is impossible to say they never will, only to reiterate that it will be essential to keep records and breeders will be encouraged so share information for the good of the breed as a whole.

There has been a very high percentage of cats with kinked tails amongst the cats imported from Thailand. It is recognised that this a common trait in cats from that part of world. Since the Written Thai Standards that we have seen for the Khao Manee all mention that the tail should be long, yet rather minor tail kinks that do not substantially shorten the tail are not seen as faults in it's native land, we feel that breeders should not, at least at this time, select only for straight tails. As it has no major impact on health and welfare, breeders are recommended initially to focus on genetic diversity (eg not all going to the only male with the straight tail) yet avoid selecting for tails that are significantly shortened. Records are being kept and sent to Dr. Leslie Lyons Lab along with DNA swabs regarding hearing status, tail kink status, eye color, kitten "cap," and homozygosity/heterozygosity when known. We are also keeping photographic records of offspring, noting white spotting patterns on ww non-standard colored kittens.

6: Genetic Diversity

At present Dr Lyons is collecting Khao Manee samples to produce a genetic diversity score and the cats imported to the USA and to the UK have contributed DNA. Records are being kept and conveyed to Dr. Leslie Lyons Lab along with DNA swabs from each kitten born regarding hearing status, tail kink status, eye color, kitten "cap," suspected genetically influenced disease, and homozygosity/heterozygosity when known. We are also keeping photographic records of offspring, noting white spotting patterns on ww non-standard colored kittens. This section will be further developed once results have been produced.

There are no plans as yet to outcross the Khao Manee with any other breed. The intention is to maintain diversity by import. If this became impossible for any reason, and/or Khao Manee breeders were advised by veterinary/genetic counseling that out-crossing was needed to maintain/improve breed health, then the breeds that would be considered are Thailand's other natural cats, the Korats and Thais. This policy would be revised to include advice for breeders if such an eventuality ever occurred

SERENGETI BREED COMMITTEE REPORT

JULY 2012

The Serengeti Breed Group continues to make steady progress towards completing the requirements to ultimately advance to championship status.

We are preparing the materials to request Advanced New Breed status for next year and will be presenting the required materials to the Genetics Committee, the Rules Committee and the Executive Office in September of this year. We are planning to present several cats at the Annual Meeting in Columbus, Ohio and then, if our materials are acceptable, we hope to come to the Winter meeting to make our formal request.

The Serengeti breed group is planning to show many new kittens this year and to continue to show them throughout the various TICA regions. Several new litters and individual kittens have already been registered after the May 2012 cut off for our report.

I am pleased to report the following information for our breed as of May 2012:

Number of Catteries owned by individual breeders registering Serengetis – 57 plus 27 additional litters registered without a cattery name.

Total litters registered – 276

Litters registered last TICA year – 27

Total individual cats registered – 441

Total individual cats registered last TICA year – 64

Total times Serengetis have been shown – 127 in 7 regions including Europe

Total times Serengetis have been shown last TICA year – 19 in 3 regions including Europe

Total individual Serengetis that have been shown – 43 in 7 regions

Total individual Serengetis shown last TICA year – 9 in 3 regions

Total Serengetis shown by Region:

EN – 60 shown representing 22 individual cats

EW – 7 shown representing 5 individual cats

GL – 20 shown representing 7 individual cats

MP – 6 shown representing 2 individual cats

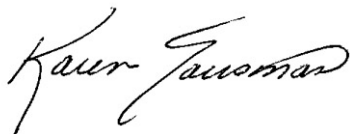

NE – 2 shown representing 1 individual cat

SC – 7 shown representing 2 individual cats

SW – 25 shown representing 7 individual cats

The Serengeti breed group is planning to show many new kittens this year and to continue to show them throughout the various TICA regions. We truly appreciate the support of Bobbie Tullo, our breed advisor, and all of TICA in our quest to develop this beautiful breed.

Respectfully submitted,

Breed Group Chair

Burmilla (BM/BML)

HR: This application seems to all be in order. This is another breed that is just starting to gain popularity in the US, but is quite developed in GCCF in the UK and in the Australia area. There are a couple of breeders here in the US that have imported some stunning black silver and seal silver chinchilla Burmillas recently and are sharing this gene pool with newer breeders. My only question is.....can we advance one breed in a breed group (the Asian breed group in this case) to ANB while leaving the others behind in Registration Only? Would we need to dissolve the Asian breed group?

EC: I think it will, right now, be the Burmilla breed group with both LH and SH varieties.
My question is - why apply as a category I breed when they are clearly a Category IV - hybrid breed?

NP: Indeed, the Burmilla was created as a hybrid. The group had lengthy discussions about applying as a hybrid breed and finally decided that they did not want to deal with the issue of American Burmese outcrosses and the problems of Good Fortunatas. They decided that they were willing to wait the three generations should anyone actually decide to do an outcross. I believe their issues are valid and there is no good reason not to allow them to be Category I.

HL: Looks fine to me though I'd quibble a little with their muzzle description: "Good width at the jaw hinge, tapering gently to a medium, blunt finish with gentle curves. Neither pointed nor excessively rounded." I am not sure what exactly a medium "finish" is. Medium in width? Medium in length? But from a Genetics front I see no issues. I have seen pictures of these cats for many years and have seen a few of them in person.

AK: I do not need to do homework on this one. I do not have any objections. I actually think this breed will become very popular in a short period of time once people discover it. 100% in favor.

Chausie (CU)

HR: Hi all - I have been quite impressed by the CU development, especially over the last two years. Although they still have some challenges ahead of them with regards to overall coloration and head structure, this is certainly not unusual for any new breed. And quite frankly, I am smitten with the grizzled coloration :)

HL: They are getting better. They still tend to look like bad Aby's too often, but I have seen some much better ones and advancing them will help them move forward I think. I too adore the grizzled color. It is very distinctive. I can quibble with the standard. It is rather repetitive. Puffy nose-leather is mentioned, what, about 5 times? And angled cheekbones don't "create" a change in direction. The smoothest wedged Orientals have very angled cheekbones that are in alignment with the wedge. So the standard could stand to be cleaned up, but in spite of that I am not opposed to advancement.

MP: I agree in full with Heather Lorrimer, also for what concerns rewriting the Chausie standard.

EC: Application is in order - they have been working hard on this breed - I think there is quite a way to go before they have a distinctive breed look, but they meet the current requirements.

Elf (XEF)

AK: I completely agree with Cristy and want to add comments on the obvious failure of this group of breeders in promoting their breed at shows. I personally have not seen any of them at least in the last couple of years. It looks like nobody, including potential fanciers, has been offered a chance to provide feedback and accompany the necessary process of breed population growth towards consistency in a distinct look. For a breed to be

successful not only the numbers on paper (registration) are required. In the absence of quality control at this level we do not know if those litters actually exist so the only measure of growth is to see them out.

I am personally against advancing this project to the next stage.

HL: No. If they want to be a different breed then they need a different standard. You can't take the one standard word for word and graft in the mutation specific part from another breed, also word for word and say you have a new breed. Plus the ears are a Mendelian single gene trait. Single gene trait differences do not make a new breed, though they can make a member of a breed group. If they want to back up and significantly change their standard and start all over that's fine. But that is not what we have. I have seen a cat or two of these. They are kind of cute, but they are curly eared Sphynx. On top of that is the odd 45 pt head. And they WILL get straight eared kittens.

EC: There appears to be a schism among the Elf breeders - some want to be NT Sphynx and others want to develop as a new breed. If they truly want to be a new breed, they must revise their standard to reflect something that is not a SX with curled ears - further, they must start at RO.

HR: Unfortunately, the Elf group needs to decide what direction they want to take. They have been showing as a NT SX because that is what they truly are.

The Elf standard mimics the SX standard to a tee, with the exception of the Ears category of course. It is a New Trait SX - it is a single phenotypic difference with an otherwise identical standard. What this truly emanates is a "Sphynx breed group." <GASP> I know that sounds strange, but isn't that what it would end up being? It is an existing breed which differs by a single difference and uses the other breed as an acceptable outcross. They have been showing in the correct category - New Trait. However, now that they are getting pushback from the SX community, it appears they want to go a different route. This is fully within their right, but then they need to follow the proper process....which would be to apply for Registration Only status. A few other comments -- What is a "scissors bite?" An undershot jaw should never be acceptable - in any breed.

European Burmese (UBU)

HL: OK, I was dubious, and I still don't like that the standard reads so much like the Tonk standard. But I am convinced. They don't LOOK like Tonks. They look quite a bit more foreign in truth. I wish that somehow the standards reflected the rounder look of the Tonks and the rather more angular look of the EuroBurns, but so it is, standards get interpreted and these are worthy cats.

MP: I would have preferred if TICA had continued the push to merge European and American Burmese, something that already happened in Europe in all these years in which TICA did not accept the European Burmese. A merge would have benefitted the gene pools of both breeds.

I am very worried of the many, many breeds that are proposed. At this Board meeting we have six new applications, and we have many every time. I do not believe that the genetic diversity in domestic cats can afford for so many different breeds. The experts in this Committee may answer about this point, but what I realize is that the largest cats are about four time larger (in linear dimensions) than the smallest, and not ten times as for dogs. This is a hint. Now, if we keep accepting new breeds, we encourage further selection, that will keep reducing the genetic variance. Why do breeders propose new breeds instead than selecting for improving the breeds that have a reasonably large gene pool I do not know, but I guess that it is to become rich and famous. However, this is likely to be detrimental to the cats' health. I had previously mentioned the fact that merging American and European Burmese would be much better than approving two separate breeds - particularly since, de facto, this is what TICA has implicitly done in all these years, and here in Europe now many, many European Burmese have bodies far cobbier than what the original traditional standard demands for. So this merging has already occurred, by and large, in the breedings - thanks to TICA.

I thought to be the only Genetics Committee member to be against the European Burmese - now that I see that I am not alone, I change my vote to no.

EC: I don't believe that it is in the best interest of the BU breed to separate out the "European Burmese".

AK: Based on a careful analysis of the standards which definitely describe different cats and my personal experience seeing cats in Europe (the largest cluster no doubt in Russia) and even Australia, I am in favor of the recognition of the European Burmese as a separate breed. This will probably be beneficial to our ability as a registry to attract more crossover breeders.

Lykoi (XLY)

HR: I certainly don't have any objections to moving them to Registration Only, but we have soooooooo much to still learn about this new breed. It is certainly unique!

However, as a "by the book" person, my only hesitation is that they have an incomplete application. In tending to the Registration Rules and procedures, they really should wait until they have all of their supporting documentation to apply for the next step. It seems we've had several folks asking for us to "bend the rules" lately - and we have to draw the line somewhere. But frankly, that's not our decision to make. It's up to our Board to make those decisions.

EC: Of all the new breeds I've seen, this appears to be the most distinctive - I am not sure that it will find a lot of interest, but I support RO status to see where it goes.

Nile Valley Egyptian

HL: There might actually be something distinctive here, but that is not what I see in the standard. What I am seeing: A round head that then tapers down to a medium-small rounded muzzle with some whisker pinch in the process, eyes that have a distinctive shape flat on top then turning down like an L on it's side to the inner corner and a almond bottom with the overall eye angle NOT in line with any of the headlines, rising only slightly about horizontal, large wide based ears set on the top of the head but not too close together, long legs, medium-fine bones. The cats in the pictures are all spotted tabbies with spots elongated in the dorsal/ventral direction. If they want these cats to look like the African wildcats they are going to have get much longer legs and bodies, but there are hints of that head in their ferals.

I am not opposed to registration-only status if they can manage to write up some sort of distinctive standard!

EC: I found this application to be strange - the cats look like random domestics to me - I didn't see any common thread among the photos - type and color is all over the map, unlike the Sokoke that showed a lot of consistency from the outset. I'd vote no.

AK: After reading some materials provided to me by Bobbie and looking at some pictures of cats is several web sites (including <http://www.nilevalleyegyptian.com/> where some designations are trade-marked like "The original domestic cat") and not having received any answers to my questions from Ms T'Pell Wilson these are my thoughts:

-From the narrative attached to the application for advancement to "Registration Only New Breed", it can be concluded that the population of cats in question is a large feral cat population with the characteristic complex gene frequencies and phenotypes and not at all a "breed" or even a population of cats identified as a foundation for the development of a new breed. Although the potential for development of new breeds or supply of outcrosses for existing breeds is obvious, the project as described in the application does not fit in

our “New Breed” development path and seems to focus on the access to TICA’s endorsement for protection of this large cat population for reasons that are not completely clear to me.

- TICA, like other cat associations in the world have recognized several breeds originated from foundation cats from this very unique geographic spot characterized over thousands of years by heavy traffic and exchange of all kinds of things including animals: Abyssinian, Egyptian Mau, Turkish Van, Turkish Angora, Anatolian and perhaps others I am not aware of, I am not in favor of embracing one more project, especially one with poorly defined goals.

-Several of the claims that Ms T’Pell is making are hard to prove without genetic testing of this and other feral cat populations. The high prevalence of colorations determined by dominant genes like piebald spotting S, or sex linked orange O is not surprising at all and by itself does not support the hypothesis that the corresponding mutations (from wild type agouti) originated in Cairo.

-Registration only with no plan or intent to develop a new DISTINCT breed does not make any sense to me.

Toybobs (XTB)

HR: I have had the pleasure of seeing and handling several Toybobs in the States and in Denmark - I haven't been to Russia yet. My only input is that the cats appears to be quite healthy and very robust, but my opinion if based on a very small sample size of course. They have a compact and extremely muscular body - you can actually see their muscles rippling under their skin when they run. I feel their general head shape is very much like a Thai and quite attractive. I have seen them in pointed, black, and white. However, I do not know what happens when one breed Toybob to Toybob.

HL: I know nothing about these cats. I have never seen one. I found out very little more online. I am very curious about them. They look quite distinctive. Does their gene inherit dominantly or recessively? Some of the claims made about them will probably prove to not be true, but moving them to registration-only seems appropriate.

EC: From a genetics standpoint, I'm worried about any breed which has miniaturization as a major selling point. I don't think we know enough about these cats.

AK: “I personally would like to learn a LOT more about these cats before creating any expectations on advancement. For example: do they have a distinct look?, what is the actual size? what is the nature of the mutation responsible for the shortening of the tail? Is it a modified Manx? Because it is very likely and because we already have the PB. AT and MX/CY, we need to make sure a distinct standard for the breed is developed. I would NOT recommend accepting all colors/divisions.

This is also a good opportunity to remind ourselves that there are cat associations that do NOT accept cat breeds with detrimental genes such as “Mx” which is a homozygous lethal so we may not want another breed that will place us “in conflict”.

-At the moment I do not have a rationale for not letting the Toybob receive “registration only” status but we’ll have to watch closely.”

COMMENTS ON BREEDS

(1) Lykoi – Registration Only

(BT) I have reviewed the material in the request for the Lykoi to move to Registration Only and have had several email exchanges with Mr. Gobble regarding this mutation. I have also seen photos of the cats on several occasions. I am fine with the request to move to Registration Only.

(NP) I have no objection to moving the Lykoi to Registration Only. I had the opportunity to meet Dr. Gobble and handle a Lykoi at a recent show. We had a lengthy discussion about the breed and I helped him get the proposed standard (not a requirement for RO) in TICA format and language.

(MW) from a Rules perspective, the initial application appears to be in order, although the required 10 cats registered are not in place at the 90 day point. My concerns are that at present there are a very small number of cats associated with the breed and within a very restricted geographic area. I do feel that perhaps the application is premature and should be re-submitted once there are more examples of the breed across a wider breeder base.

(EC) While I would like the numbers to reflect cats and litters actually registered, it is not the fault of the breeder that the paperwork submitted to the EO is not yet back.

If the required numbers (and documentation of correct fee payment) is in our hands 60 days before the Annual, I feel that the application is in order. While I share Martin's concerns about numbers, we are only talking registration only. This is a true "new breed" based on a new mutation, not some creation made by crossing existing breeds. Whether it can develop a following remains to be seen.

(KV) - I agree with Ellen's comments and support that the Lykoi Cat shall be advanced to RO-Status.

(CB) The Lykoi application for Registration Only status appears to be in order. While it is not the fault of the applicant, TICA's Registration Rules do not seem to specify whether the requirements must be fully documented 90 days or 60 days before the board meeting. If 60 days, that does not give the committees the opportunity to review them. It appears that only one person has been breeding Lykois to date. As I said with another new breed application previously, the rules may need to be more specific about whether or not all TICA members listed on an RO application need to have documented ownership or breeding experience with the new breed. Right now any TICA member can be listed on an RO application whether they have any connection with the new breed or do not. My last comment is, Lykoi breeders may find it difficult to find homes for all the nonstandard Lykois they produce. Solid black kittens and cats can be very hard to place.

(2) Toybob – Registration Only

(CB) I am concerned about this breed for many reasons. There are serious problems with their choice of outcrosses. Possibly the most critical is that the Burmese breed already has a serious problem with miniaturization – and it is definitely miniaturization, not a "mutation."

(BT) Maybe it's just me but my thoughts on miniaturization have always been that it is selecting for the "runt" of the litter and I don't know how that can really be healthy. A further comment to my concern - I am wondering if this is just a small breed like the SG and not a miniaturized breed.

(EC) I share concerns about miniaturization - I'd like to see documentation on this breed. However, I think that for RO purposes, the application is in order

(3) Elf – PNB Application

(BT) This application is out of order.....the Experimental Elf is in the Experimental Registry and cannot go from Experimental to PNB.....they first must apply and be accepted as a Registration Only Breed and follow the rules as set forth in the New Breed Program for new and developing breeds.

(MW) I agree - they need to submit an application to advance to Registration Only status first. I also note that in the proposed Breed Standard the points allocation only adds up to 95 points and that the head section exceeds the maximum allowance of 40 points. In my opinion, the standard reads as though the Elf is a Sphynx with curly ears. I therefore question whether it is indeed a new breed.

(CB) The Elf is not eligible to apply for PNB status. Breeders of new breeds should verify that they are following proper procedures by consulting their official breed liaison or members of the Rules Committee for accurate information.

(CL) This application is out of order according to with the TICA Registration Rules; the next step is to be accepted as a Registration Only Breed. The Experimental Elf cannot go to PNB.

(KV) If the Elf-breeders want other outcrosses like the SX (e.g. they don't want to use DR) then they cannot be put in a SX-breed-group and must therefore apply for RO-Status first.

(EC) Under our rules this application is out of order - if they wish to apply as a separate breed, they need to apply for RO. Further, I think we need to determine the will of the breeders - I received an e-mail stating that the majority of the breeders do not wish to go the new breed route. I'm not sure how we can determine this - but I'd say that we should take no action until we know for sure what direction the majority of the breeders want.

(4) Burmilla – ANB Application

(BT) I have reviewed the material regarding the Burmilla advancing from RO to ANB and all appears to be in order from a Rules standpoint.

(CB) The Burmilla application for advancement from TNB to ANB appears to be in order.

(MW) from a Rules perspective, the application to advance under the TNB process is in order.

(CL) The application submitted for the BURMILLA BREED GROUP (BM, BML) seems to be all in order for me according to the Registration Rules. However I have some concern about the Bumilla applying for Category I. Since the breed is a hybrid originating in the UK in 1981 from an accidental mating between a (European) Burmese and a Chinchilla Silver Persian I would tend to think the Burmilla should be located in Category IV.

(EC) I agree with Carlos - I believe Category IV would be the appropriate category

(KV) - I agree with what Bobbie has written.

(5) European Burmese – ANB Application

(BT) I have reviewed the application submitted for the EBU and find all in order.

(AB) My comment is going to be that we don't need the European Burmese as a separate breed. The differentiation was made as a way to try and get away from the head defect gene -- since Lesley Lyons has now identified the head defect gene I would expect that there will be a test available soon and so the differentiation will no longer be needed. I would prefer to see the BU standard changed to reflect a more moderate cat that can include the European Burmese look rather than bring it in as a separate breed. I think CFA is the only organization that calls it the European Burmese so does it really qualify as a Transfer New Breed?

(MW) From a Rules Committee perspective, I believe that the application matches the criteria set out in the Registration Rules 33.10, subject to approval of the proposed standard by The Genetics Committee. Whether through the establishment of a separate breed in Championship or the amendment of the existing breed standard, TICA does need to be able to allow a fuller range of Burmese to be shown in Championship.

(SA) Just a heads up that this is going to affect the Burmillas as well, who only want to allow the European Burmese as an outcross.

(SL) Both ACFA and CFA list the EB. Let's not let the other NA associations get the registry dollars! LOL!

(EC) In addition to all Christy has said - we also need to be aware that in TICA the BU and BO are part of a breed group, so anything done to the BU affects the BO as well. I share a lot of the concerns voiced by Christy and Amanda - I have always felt that we should have ONE Burmese breed with a standard that can accommodate all the cats.

(CL) The application submitted for the EBU seems to be all in order for me according to the Registration Rules. I like the proposal of having the European Burmese in a different breed group from the Burmese/Bombay breed group. There is a significant difference in terms of type between the European look (FIFe Burmese or Australian Burmese) and the American look (TICA and CFA). I don't think we can put them in the same breed group the way we do with current Burmese and Bombay. However I see an issue of having the EBU in category 1 and the current Burmese/Bombay also in Category 1, because this category only allows outcross only within the breed group. If the American Burmese breeders want to use the EBU to improve the genetic pool they would not be allowed to do it with our current rules according with this proposal.

(KV) While the application has been forwarded in a correct way I oppose it. I have judged Burmese all over the world and also have finalised so-called "European Burmese" frequently when they were matching our standard. In the "European Burmese" you will also find longer and shorter heads, the body-type should be the same like we have in TICA. I really see a problem if we get "EB"s registered - where to draw the line? Who tells the owners if they should be registered as BU or as "EB"? Will there be outcrosses allowed to BU and BO? I simply think that this is not a good idea - and just to get some more dollars from registrations - sorry, this is no argument!

(CB) According to Registration Rules 33.4.1 and 33.4.2, "European Burmese" cannot be used as the name of a breed in TICA. Also, I do not think the European Burmese qualifies as a Transfer New Breed. I question the claim that the "European Burmese" has championship in both CFA and GCCF. The name "European Burmese" is used as the name of a separate breed only in CFA. For the situation in GCCF to be comparable to that in CFA, GCCF would have to recognize both the "American" style of Burmese and the "European" style of Burmese -- with a breed standard for each. That is not the case. The Burmese breed in Europe varies in type; ditto for the Burmese bred in America. For example, there is a sizable "traditional Burmese" community in America. Also, the quintessential extreme roundheaded American Burmese, Fortunatas, who was born about 1970, has something like 3000 descendants in

European catteries, compared to about 5000 in American catteries (reverse pedigree data). This indicates that there has been considerable use of ***late 20th century*** American Burmese in European catteries. Thus, there appears to be just ***one*** Burmese breed, not two. Dr. Leslie Lyons' research has demonstrated that the Burmese craniofacial defect from Fortunatas all by itself gave certain lines of Burmese an extremely roundheaded look virtually overnight. Some cats show this more than others, but the effect is real. A test for the defect may shift the Burmese breed worldwide toward a more moderate look. The situation of the Burmese breed is changing rapidly with the mapping of the head defect gene and the development of new breeding and registration rules in CFA (which necessarily impacts outcross opportunities for TICA Bu/Bo breeders). Dividing the Burmese breed into two breeds at this point in time runs counter to current trends and unlikely to benefit the breed or TICA.

(6) Chausie Comments – Application for Championship

(MW) I have reviewed the Chausie packet and from a Rules Committee perspective, believe that it meets the requirements of the relevant Registration Rules.

(SL) SUPER! Good luck.

(NP) Everything looks OK to me.

(CB) I have reviewed the Chausie application for championship, and it appears to be in order. I note that there will be an update of the membership list.

(CL) I think the request to advance the Chausie to Championship class is fine according our registration rules.

(EC) This application is in order.

(7) Kurilian Bobtail - new standard

(CL) I'm in agreements with the proposed change in the Kurilian SH/LH standard. The wording looks closer the way that all TICA standards are written and clean up some contradictions on the current standard, example: Body-torso: compact and semi-cobby. However I have some concern about the ears points from 10 to 5. I found the ears set, shape and size very distinct on this breed. I tend to think that we should keep 10 points for ears. Other than that, I think this proposed standard is positive for the breed.

(CB) I agree with Carlos Lopez.

(EC) I'd prefer to see the breeders exhibit the cats until the deadline for the Winter Meeting and see if the standard needs further tweaking. We had a large class of kittens at a recent show and one of the exhibitors said that the WCF standard had just been changed.

(NP) I am wondering if the breed sections have been polled regarding the proposed standard changes. I also agree with Ellen.

The International Cat Association, Inc.
Board of Directors
Genetics Committee
Rules Committee
P.O. Box 2684
Harlingen, TX

May 30, 2012

Dear Directors and Committee Members,

We, the members of the TICA Chausie Breed Section, hereby declare our intent to apply for advancement of the Chausie from Advanced New Breed (ANB) to Championship. We ask that our application be considered at the Annual Meeting of the Board of Directors in September, 2012.

The members of the Chausie Breed Section also ask that you consider this application as the breed report for the show year 2011/2012.

As of the Winter Meeting 2012, the Chausie will have had Advanced New Breed status for nine years (since the Winter Meeting 2003). Prior to the deadline for publication in the Volume 33.3 edition of the *Trend*, we submitted to Brigitte McMinn, the editor of the *TICA Trend*, a notice of intent to apply for Championship status. We have paid the filing fee of \$50.00 (receipt enclosed), and we believe we have met the other requirements, as detailed in the enclosed application.

The Chausie Breed had not modified their standard since 2009 and based on feedback from the judges handling the breed the breed group felt it time to modify our standard as we move into Championship Status. We enclose the proposed modified standard with this application.

Per the Registration Rules for wild species hybrid source breeds the Chausie would like to request to move to Championship as a Category 1 breed with only SBT cats qualifying for the show bench.

We feel we have met the requirements in both the PNB and ANB phases of the new breed process. We are now ready to advance to Championship.

On behalf of the members of the TICA Chausie Breed Section, we, the undersigned, ask you to consider our application for Championship status.

Respectfully,
Bobbie Tullo
Working Breed Chair, Chausie Breed Section
PO Box 212
Pine, AZ 85544
CLM-0836-SW

THE INTERNATIONAL CAT ASSOCIATION, INC.
ADVANCEMENT TO CHAMPIONSHIP OF AN ADVANCED NEW BREED

Name of Breed: **Chausie**

33.8 Championship Status Requirements. An Advanced New Breed may apply for Championship Status upon completion of the following:

33.8.1 At least 1 year has passed since the breed was first advanced to Advanced New Breed status. The Board of Directors at its discretion may reduce the time required of Transfer New Breed.

Date (meeting) advanced to ANB: **Feb. 2003**

33.8.2 A minimum of 200 adults registered in any full member association of the World Cat Congress (WCC) of which a minimum of 50 are registered in TICA at a level potentially eligible for championship competition.

Attach Addendum A. 1158 cats registered as of 4/18/2012 - List of 200 cats Attached

33.8.3 List of at least 35 shows licensed by WCC organizations of which at least 10 must be TICA shows where cats have been exhibited, including region/countries and judges. A Show shall be defined as a "show catalog" for this purpose.

Attach Addendum B. Attached

33.8.4 List of 25 unique individual cats that have been shown, including registration numbers and region/countries shown.

Attach Addendum C. Attached

33.8.5 List of judges who have judged the breed.

Attach Addendum D. Attached

33.8.6 A minimum of 5 regions are represented by a minimum of fifteen breeders who are TICA members in good standing actively breeding the breed.

Attach Addendum E. Attached

33.8.7 At least 25 unique cats shown in the Advanced New Breed Class including entries shown in at least five regions during the year preceding the application.

Attach Addendum F. Attached

33.8.8 Submission of an electronic Application for Advancement to Championship to each member of the Genetics Committee and each member of the Rules Committee at least 90 days prior to the board meeting at which approval is sought. Any proposed modifications to a previously approved standard must be submitted with the application. Following approval of the proposal by the Genetics Committee and Rules Committee, the application must be submitted by the ANB Working Group Chair to the TICA Executive Office at least 60 days prior to the Board Meeting for inclusion in the agenda. Any comments of the Genetics Committee or Rules Committee must be included. The application must include the following: (applications available from the TICA Executive Office or at tica.org)

Emailed 5/22/12

33.8.8.1 A Letter of Intent to apply for approval as a Championship Breed, signed by at least ten TICA members in good standing; **Attached**

33.8.8.2 A proposed breed standard; (See 33.8.8) Include as a separate document in the application packet. **Attached**

33.8.8.3 A proposed breeding program; **Outlined by the standard and the Letter of Intent. Cats to be shown as Category 1 breed in championship per the rules for non-domestic source breed hybrids.**

33.8.8.4 A processing fee of \$50. Include copy of DAR in application packet. **Attached**

33.8.9 A Notice of Intent to Apply for Advancement to Championship Status must be published in the TICA TREND at least 120 days prior to the meeting at which the application for advancement will be heard, and which invites comments about the breed to be forwarded to the Executive Office. **Notified Brigitte on April 30, 2012 for Vol. 33.3**

At the meeting of the Board where application is made:

33.8.10 Make a formal presentation at the meeting of the Board of Directors, including photographs, illustrations, statistics, health and breeding reports, examples of the breed and any other relevant material. **Will present at the Annual**

CATEGORY: Traditional.

DIVISION: Solid ,Tabby

COLORS: Black, Brown Ticked Tabby, Black Grizzled Ticked Tabby.

PERMISSIBLE OUTCROSSES: None

HEAD:

Shape: Modified wedge, medium in width from frontal view. High, angular, long cheekbones create a change of direction at the muzzle. The long muzzle balances the cheekbones and ends in smooth, full contours, a full chin and puffy nose leather.

Eyes: Medium to slightly small in size. Bottom is a half oval that slants toward the outer base of the ear. Top is a markedly flattened, horizontal half oval. Gold or yellow eye color preferred, hazel to light green allowed.

Profile: Long, sloping forehead ends in a gradual, slight convex bend over the eyebrows. Just above the eyes, the profile descends in a gentle concave curve to below the eyes. The nose rises near its end to form a slight bump above the convex nose leather.

Ears: Tall, large ears are set at a slight outward angle on top of head, about two fingers apart between the inside bases. The ears are fairly wide all the way up with rounded ear tips. Ear tufts preferred; lack of tufts not a penalty.

Neck: The neck is of medium length and thickness.

Muzzle: Long to balance the cheekbones, ending in full slightly rounded contours, full chin and puffy nose leather.

Chin: Full, both in profile and frontal view, and of medium depth.

Nose: Medium to wide, slightly broader between the eyes. Nose leather is convex and full.

BODY:

Torso: Long, lean, flat-sided and deep chested. The large rectangular body is firm, but not broad or bulky.

Legs: Long, with medium boning.

Feet: The feet are medium in size and oval in shape.

Tail: Slightly short, medium width, with slight taper and fully articulated.

Musculature: Long and lean rather than bulky.

Boning: Long legs with medium boning that complement a deep chested torso of medium width.

COAT/COLOR/PATTERN:

Length: Short to medium, with enough length to accommodate at least two bands of ticking.

Texture: A dense, soft undercoat with a somewhat resilient, slightly coarser outer coat. Solid black may feel softer. Black grizzled cats may feel coarser in proportion to the amount of grizzling present.

COLORS:

Brown Ticked Tabby: Mouse gray color next to the skin with sandy gray to reddish gold base coat. The coat will have two or three bands of dark ticking. Tabby barring is preferred on the tail, upper inside front legs and to the hock on the back legs. The neck may or may not have necklaces. The backs of the ears will

have thumbprint markings of a lighter color. Off-white color should outline the eyes and muzzle. The underside will range in color from off-white to sandy-gold. Some flecking or speckling may occur on the stomach. The nose leather is brick with a dark outline. Paw pads may be black, black with rosy tones, pink or any combination of these. Allow for faint tabby markings on body of kittens up to one year old.

Black: Solid black.

Black Grizzled Ticked Tabby : A

pattern acquired from the breed's Jungle Cat (*Felis chaus*) ancestors. The pattern is a dominant trait that may possibly be caused by a mutation at the agouti locus or extension locus. The hair shaft is banded with lighter coloration at the skin (akin to mouse coat) alternating dark and lighter bands of ticking and ending with a dark tip. Nose leather is always solid black. Paw pads may be solid black, black with rosy tones, pink or any combination of these. Allow for minimal grizzling in kittens

GENERAL DESCRIPTION: The Chausie should resemble its non-domestic ancestor, *Felis chaus*. Accordingly, the Chausie is a tall, long-legged, lean and supple cat. It is built for running and jumping over water, reed beds, and other obstacle-filled terrain. Like a basketball player or an Olympic long jumper, the Chausie is ectomorphic, with musculature and lanky body low on bulk, built with the limberness and reach for a long stride and lightning pounce. The breed has a deep chest for lung capacity, but flat sides for light weight and flexibility. Like *Felis chaus*, Chausies have large, upright, preferably tufted ears, a long forehead and muzzle, and a slightly short tail. The eyes are flattened above and rounded below, above exotically slanting high cheekbones. Temperament is predominantly domestic. Chausies are good-natured, loyal, highly intelligent and trainable. They are active, curious, playful cats that require stimulation and company.

ALLOWANCES: The tail may range from 3/4 to full length, with slightly shorter than a normal length tail being the preference.

Larger size and slightly heavier boning on males. Jowls on males that pull the ears a little lower than otherwise desirable.

PENALIZE: In tabbies, a lack of tabby markings on legs or tail.

DISQUALIFY (DQ): Tail too short, resulting from a mutated gene (MX/PB/ABT-ABS). Tail kinked or lacking flexibility. White lockets.

Temperament must be unchallenging; any sign of definite challenge shall disqualify. The cat may exhibit fear, seek to flee, or generally complain aloud but may not threaten to harm.

In accordance with Show Rules, ARTICLE SIXTEEN, the following shall be considered mandatory disqualifications: a cat that bites (216.9), a cat showing evidence of intent to deceive (216.10), adult whole male cats not having two descended testicles (216.11), cats with all or part of the tail missing, except as authorized by a board approved standard (216.12.1), cats with more than five toes on each front foot and four toes on each back foot, unless proved the result of an injury or as authorized by a Board approved standard (216.12.2), visible or invisible tail faults **if Board approved standard requires disqualification** (216.12.4), crossed eyes **if Board approved standard requires disqualification** (216.12.5), total blindness (216.12.6), markedly smaller size, not in keeping with the breed (216.12.9), and depression of the sternum or unusually small diameter of the rib cage itself (216.12.11.1). See Show Rules, ARTICLE SIXTEEN for more comprehensive rules governing penalties and disqualifications.

Subject: Elf Cat Application for Advancement

May 29, 2012
To: Concerned TICA Board, Committees, and Members
Subject: Request for Elf Cat to Advancement to Preliminary New Breed

On March 9, 2012 a letter of intent was emailed to Leslie Bowers and Bridget McMinn stating that the Elf Cat Breed group intends to present at the TICA 2012 Annual meeting an application for advancement to Preliminary New Breed of the Elf Cat (EF).
(see Attachment 1 Letter of Intent) to be published in the TICA Trend 120 days prior to the Annual meeting in August 2012. Payment was sent and accepted via phone. Payment of \$50.00 was paid by Kathryn W Watson (VISA cc).

As an explanation for our request to become a Preliminary New Breed:
The Elf Cat was founded approximately 7 years ago by Karen Nelson and Kristen Leedom. Karen was the spokesperson and talked at length to Solveig as to what was the best way to move forward with the breed. It was always the desire that the Elf Cat be a breed of its own. Initially, Solveig thought it was best that we proceed as a New Trait of the Sphynx, as she believed that (1) we would be getting a lot of straight-ear kittens that would look very much like the Sphynx, and (2) these straight ear cats would be bred back into the Sphynx program. Straight ear cats would be shown as Sphynx and curled ear cats would be shown as a Sphynx with curled ears.

Because we really had no choice at that time, it was agreed that is the road we would follow. We began to register our cats as Experimental ELF/SX/ACL and show them in New Traits. As a New Trait, *we were not required to apply "For Registration Only."* We have spent the past several years registering and showing our Elfs as a Sphynx New Trait. Our registration of both litters and individual cats exemplifies our commitment to both TICA and the Elf Cat. We have already far exceeded the demands of time and numbers required "For Registration Only."

As time has passed, we are getting very few straight ear kittens. Even in the first couple of generations of Sphynx bred to Elf, almost all the kittens are curled. Since the curled ear is dominant, we expect this trend will continue even using the Sphynx as an outcross. The interest in this new breed has increased considerably in the past several years with more breeders becoming involved. As we have begun to show more and more, we have found that, from a show standpoint, the Elfs do not fit well as a New Trait. The judges comment over and over, "This is not a Sphynx- why are showing as a Sphynx New Trait-you should be showing as a new breed." They admit they do not know how to fairly judge them. We have also found the other Sphynx breeders (the original

founders are all Sphynx breeders) do NOT want them as a New Trait Sphynx. It is our belief that neither the Sphynx Breed Committee nor the Sphynx breeders in general will allow the Elfs to be incorporated into the Sphynx.

Yet another reason we do not fit into the Sphynx is our Breed Standard for the Elfs is different from that of the Sphynx. As a Sphynx we would have to use their Standard with the exception of the curled ear. That would include using the same outcrosses. There is a growing trend with Sphynx breeders to go back to using the Devon Rex as an outcross in order to set a type of a much shorter nose and very pronounced "break" in the nose. The Elf Cat breeders do not wish to use the Devons as an outcross. Our aim is not to produce a cat that looks like a naked Devon. Also the Devons have health issues that Sphynx breeders have been working hard to eliminate, especially spasticity and HCM. Nor do we wish to use the Domestic Shorthair as there is far too much variance in their type. We only wish to use the Sphynx and the American Curl as our outcrosses. Obviously the latter could not happen as a Sphynx New Trait. The American Curl needs to remain an integral part of our breeding program. It is one of the parent breeds for the Elf Cat. If we are not allowed to have them as an outcross we will lose the very look we have worked so hard to obtain. In addition the American Curl is an extremely healthy breed and has added health benefits for our Elfs. As a New Breed, we would be allowed to keep our own name, Elf Cat (EF). We would keep our own Breed Standard (attached) and point system for championship and not use that of the Sphynx standard, as it is different on several levels and does not reflect the points that we would like to have applied to our ears.

As the judges have said to us, "You are between a rock and a hard place." - not very comforting words for our efforts over the last 3 years showing in New Trait under the Sphynx Breed group. It is painfully obvious to us how true those words are. The Elf Cat does not truly fit into a New Trait Category, so we are applying as a Category I New Breed. This is also not our ideal "spot" as we would not be allowed outcrosses in pedigrees. Our 2nd and 3rd generation litters are producing lovely show quality kittens that we would want to present at shows. At this point, Category I seems to be our best choice for recognition. Ideally, we would be our own breed, with our own Standard and outcrosses, *within the Sphynx Breed Group or otherwise as appropriate*. Solveig has made some interesting and enlightened remarks regarding our situation- a situation that other breeds are also facing, to wit:

Subject: The Elf

<Begin Quote> I have received multiple calls from people who are breeding the Elf, a hairless cat with curled ears, with the intent of establishing the cat as a breed in TICA.

I do not see any problem with the Elf from a genetic point of view. Both the sphynx and curl ear mutations are well established and are not known to be associated with serious deleterious effects. The combination of the two traits is unlikely to result in any added health risks. On that basis, I do not see reason for concern in allowing the Elf to advance.

However, there is one issue that must be addressed, namely the appropriate registration category. This issue is not at all clear cut and there appears to be considerable disagreement among the breeders.

Some breeders feel that the ideal would be for the Elf to be recognized as a variant Sphynx, to be part of the Sphynx breed group. These breeders are working toward the Sphynx standard with the exception of ear structure, and they would like to show their normal ear kittens as Sphynx. Under the current rules this would require a vote of the present Sphynx breed section, which may not result in a positive outcome. However, if this were to happen, the breeders would be bound to the Sphynx standard, with the exception of ears. It would also eliminate the American Curl as an outcross, although the breeders do not feel this would be a problem.

****It is possible that the breed group concept might be redefined so as to allow the members of a group to share a standard but still have different requirements for registration and competition. A new trait breed could be introduced into a group without affecting pedigree status of other breeds within the group. The Elf would not be a variant Sphynx yet could be part of the Sphynx breed group. (Redefining the breed group concept could potentially help in other situations and is something I would like to discuss further at the annual.)****

However, not all the breeders see their cats as a Sphynx based breed. At least one of the breeders with whom I have spoken has argued that outcrosses to either the American Curl or the Sphynx should not be needed in the future and that a pool of cats meeting the standard exists and these cats will breed true to type. Showing straight eared kittens is not an issue since the claim has been made that they are not being produced. The arguments I have been given for this approach strongly suggest that Category I may be an appropriate placement, with no outcrosses within three generations. The breed would thus be completely independent of both parental breeds and as a result could have its own distinctive standard, not dependent on that of the Sphynx breed.

So the big question is whether the Elf comes on board as an independent breed, either with or without allowable outcrosses, or if it is to be a new trait introduced into the Sphynx, either as Sphynx or as a separate breed within the group.

The variously options should be carefully weighed as the decision may set a precedent for recognition of other new trait based breeds. **<End quote>**

**** We Elf Cat breeders believe this action might be the best for us as long as we are allowed to keep our own Standard and outcrosses.** As it is not yet available, we have made the decision to move forward as a New Breed under a Category I. We understand that we would be allowed our own Standard with no outcrosses allowed in the first 3 generations. Should we not be allowed to move forward as a PNB, please give us consideration of acceptance as a breed for registration only.

We, as the foundation breeders of the Elf Cat, respectfully ask that the TICA Board give careful consideration to our request.

THE INTERNATIONAL CAT ASSOCIATION, INC.
REGISTRATION ONLY ADVANCEMENT TO PRELIMINARY NEW BREED

An indication that the breed is to be categorized as a Natural New Breed (Cat II), a Mutation New Breed (Cat III), a Domestic Hybrid New Breed (Cat IV) or a Non-domestic Species Hybrid New Breed (Cat V), with the rationale for the category must be included in this application. (Any breed may request to be classified as a Category I breed and may have no outcrosses.)

Name of Breed: ELF CAT (EF)

List the proposed breed category: CATEGORY I

Rationale for category: (See Attach 2 COVER LETTER)

33.6.1 A breed recognized for REGISTRATION ONLY may apply for Preliminary New Breed status no sooner than 2 years after acceptance for Registration Only upon completion of the following:

Date (meeting) accepted for Registration Only:

33.6.1.1 At least 15 cats which have attained the age of 8 months (at the time of application) are registered with TICA;

List cats by name and registration number.

- | | |
|--|-----|
| 1. (see attach 3 - Individual Elf Cat Registrations) | 2. |
| 3. 64 total enclosed | 4. |
| 5. | 6. |

33.6.1.4 Submission of an Application for Acceptance as a Preliminary New Breed to each member of the Genetics Committee and Rules Committee at least 90 days prior to the Board Meeting at which approval is sought. Following approval of the proposal by the Genetics and Rules Committees, the application must be submitted by the proposed Working Group chair to the TICA Executive Office at least 60 days prior to the Board Meeting for inclusion in the agenda. Any comments of the Genetics or Rules committees must be included. The application must include the following:

33.6.1.4.1 A Letter of Intent to apply for approval as a Preliminary New Breed, including a proposed Preliminary New Breed Working Group Chair and the names and addresses of the proposed Preliminary New Breed Committee to be confirmed by the Board (The Preliminary New Breed Committee shall consist of all members of the breed section.);

Include a list of names, addresses, membership numbers and request for Working Group Chair in a separate document with packet.

33.6.1.4.2 A proposed breed standard with permissible outcrosses, if any, **approved by the Rules and Genetics Committees**; Include as a separate document in the application packet. See attach 6-Elf Cat Breed Standard

THE INTERNATIONAL CAT ASSOCIATION, INC.
REGISTRATION ONLY *ADVANCEMENT TO PRELIMINARY NEW BREED*

33.6.1.4.3 A proposed breeding program;
Submit outline in packet. (See Cover Letter)

33.6.1.4.4 A processing fee of \$50;
Include copy of DAR in packet.

33.6.1.5 A Notice of Intent to Apply for Advancement to Preliminary New Breed status must be published in the TICA TREND at least 120 days prior to the meeting at which the application for advancement will be heard, and which invites comments about the breed to be forwarded to the Executive Office.

Date submitted for publication in the Trend: March 9, 2012 (see attach 1-Letter of Intent)
Include copy of DAR in packet.

CATEGORY: All.

DIVISION: All.

COLOR: All.

PERMISSIBLE OUTCROSSES:

American Curl, Sphynx, Domestic Short Hair.

HEAD:

Shape: Medium-sized, modified wedge with rounded contours, slightly longer than wide. Skull is slightly rounded with a rather flat forehead and prominent cheekbones and a distinct whisker break.

Eyes: Large, rounded lemon shape. Slanting to outer corner of ear. Slightly more than an eye width between eyes.

Ears: The overall appearance of the Curled ear should be one that is aesthetically pleasing to view. Minimum 90 degree arc of curl. Firm cartilage from ear base to at least one- third of height of ear. Wide at base and open; curving back in an arc when viewed from the front, side or rear.

The surface of the curved portion of the ear should be smooth. Tips rounded and flexible. Moderately large in proportion to head. Erect, set equally on top and side of head. Neither low set nor on top of the head. The interior is totally hairless. Slight amount of hair allowed on lower outside edges and on the back of the ear.

Muzzle and Chin: Strong rounded muzzle with distinct whisker break and firm chin.

Profile: Slight to moderate stop at bridge of nose.

Neck: Medium in length, rounded and well-muscled. The neck arches from the shoulders to the base of the skull and is powerful, especially in males.

BODY:

Torso: Medium in size, medium to medium long in length. The chest is broad, may tend toward barrel chested. The abdomen is well- rounded, having the appearance of having eaten a large meal, but not fat..

Legs: Length in proportion with body, with medium boning and firm musculature. Hind legs slightly longer than front. Front legs widely set. Females may have slightly finer boning.

Feet: Medium in size, oval shape with long, slender toes. The paw pads are thicker than in other breeds, giving the cat the appearance of walking on "air cushions". The toes are very long, slender and prominent.

Tail: Whippy, tapering from body to tip (rat-tailed). Length is in proportion to body. A lion tail (puff of hair on tip) acceptable.

Musculature: muscular, not delicate.

Boning: Medium.

COAT/COLOR/PATTERN:

Length: Appears hairless. May be covered with short, fine down. May have puff of hair on tip of tail. Whiskers are sparse and short.

Texture: Chamois-like. A feeling of resistance may be felt when stroking the skin of some cats. The skin is very wrinkled in kittens. Adults should retain as many wrinkles as possible, especially on the head, although wrinkling should not be so pronounced that it affects the cat's normal functions.

GENERAL DESCRIPTION: The distinctive feature of the Elf is their unique, attractive curled ears and nakedness. The Elf appears to be a hairless cat, although it is not truly hairless. The skin should have the texture of chamois. It may be covered with very fine down which is almost imperceptible to both the eye and the touch. On the ears, muzzle, tail, feet and scrotum, short, soft, fine hair is allowed. Lack of coat makes the cat quite warm to the touch. Whiskers and eyebrows may be present, either whole or broken, or may be totally absent. The cat should not be small or dainty. Males may be up to 25 percent larger so long as proper proportions are maintained. The Elf is sweet-tempered, lively, intelligent and above all amenable to handling.

PENALIZE: Overall small cat. Body that is too thin, frail-appearing or delicate or fine-boned; too cobby or foreign. Ears: Vertical/horizontal crimps. Depressions or ripples on the surface of the curled portion of the ears. Abrupt change of direction rather than a smooth curve.

Lack of Wrinkles on the head. Straight profile, narrow head. Non-amenable disposition. Significant amounts of hair above the ankle.

ALLOWANCES: Locketts.

WITHHOLD ALL AWARDS (WW): Any indication of wavy hair or suggestion of the Devon Rex, or Cornish Rex in molt..

DISQUALIFY (DQ): Tail faults of any kind. Straight or severely mismatched ears. Lack of firm cartilage in base of ear. Extreme curl in an adult cat where the tip of the ear touches the back of the head or the ear itself. Ear tips that are not flexible. Ears in which the lower portion of the ear is abnormally flattened, has compressed ridges of cartilage and does not have a normal, visible ear cavity. Any evidence of depilating, plucking, shaving or clipping or any other means of hair removal. Inability to handle.

Temperament must be unchallenging; any sign of definite challenge shall disqualify. The cat may exhibit fear, seek to flee, or generally complain aloud but may not threaten to harm. In accordance with Show Rules, ARTICLE SIXTEEN, the following shall be considered mandatory disqualifications: a cat that bites (216.9), a cat showing evidence of intent to deceive (216.10), adult whole male cats not having two descended testicles (216.11), cats with all or part of the tail missing, except as authorized by a Board approved standard (216.12.1), cats with more than five toes on each front foot and four toes on each back foot, unless proved the result of an injury or as authorized by a Board approved standard (216.12.2), visible or invisible tail faults if Board approved standard requires disqualification (216.12.4), crossed eyes if Board approved standard requires disqualification (216.12.5), total blindness (216.12.6), markedly smaller size, not in keeping with the breed (216.12.9), and depression of the sternum or unusually small diameter of the rib cage itself (216.12.11.1). See Show Rules, ARTICLE SIXTEEN for more comprehensive rules governing penalties and disqualifications.

May 29, 2012

Dear Directors and Committee Members,

Please find enclosed the application and supporting documentation for consideration of Burmilla as a fully recognized breed. As breeders and owners of Burmillas, we are requesting the Board advance the Burmilla breed from Registration Only to Advanced New Breed at the Annual 2012 meeting in Columbus, OH, under the Transfer New Breeds process.

The Burmilla is a long-established breed in the cat fancy, having originated in the UK in the 1980s. Burmillas have competed at Championship status in FIFe and GCCF since 1994 and 1995, respectively. It is a hybrid breed originating from an accidental mating between a GCCF Burmese and a Chinchilla Silver Persian. The breed name was formed from a concatenation of the two original breeds - BURM(ese-chinch)ILLA. The Burmilla Longhair is the longhaired version of the breed.

We believe our application meets all the criteria set forth in subsection 33.10 of the Registration Rules and our supporting evidence is attached. The enclosed breed standard is similar to the FIFe standard but re-worded to meet the requirements of TICA breed standards. To date, the current FIFe standard is the most widely accepted standard for this breed. Unfortunately FIFe does not provide centralized registration statistics, therefore, we have included examples from FIFe show catalogues to demonstrate the breed is actively shown and there is a diverse breeding community.

In consultation with several breeders, I have coordinated and prepared the application packet for submission to TICA. On behalf of these breeders, we are requesting that I be appointed as the Burmilla Working Group Chair.

In addition, we are requesting advancement of the Burmilla separately from the rest of the Asian breed group, since the LH and SH Asians at present do not meet all of the criteria for Transfer New Breeds. In our view, delaying advancement of the Burmillas until the rest of the Asian group meets the TNB criteria is counter-productive.

Thank you for your time and consideration. We are hopeful that the Board will consider our requests favorably and if you have any questions, please contact me.

Respectfully,

Stephanie Mohr

THE INTERNATIONAL CAT ASSOCIATION, INC.
TRANSFER NEW BREED *ADVANCEMENT TO* ADVANCED NEW BREED

33.10 Advancement of Transfer New Breeds. Breeds that are Championship status in at least two full members of the World Cat Congress may apply to the TICA Board of Directors for acceptance in TICA at ANB level, or for a reduction in the time required to progress to the next level in the New Breed program. The Board of Directors will address applications on a case-by-case basis. The Board of Directors may approve, disapprove or impose additional requirements on the Breed, including, but not limited to, appointing a different Working Group Chair and requiring changes to the standard and/or breed name, or any other modification which the Board of Directors, entirely in their discretion, may require.

Name of breed: Burmilla

33.10.1 The breed must have been at Championship status for a minimum of 5 years in at least 2 full members of the World Cat Congress.

Names of WCC organizations:

- 1) GCCF Number of years in championship: 1997
2) FIFe Number of years in championship: 1994

33.10.2 A minimum of 10 cats of the breed must have been registered in TICA during the 12 months preceding the application.

Attach to application a list of names and registration numbers.

33.10.3 Submission of an electronic Application for Advancement to each member of the Genetics Committee and each member of the Rules Committee at least 90 days prior to the board meeting at which approval is sought. Any proposed modifications to a previously approved standard must be submitted with the application. Following approval of proposal by the Genetics Committee and Rules Committee, the application must be submitted by the proposed Working Group Chair to the TICA Executive Office at least 60 days prior to the Board Meeting for inclusion in the agenda. Any comments of the Genetics Committee or Rules Committee must be included. The application must include the following: (applications available from the TICA Executive Office or at www.tica.org).

33.10.3.1 A letter of intent to apply for Advancement, signed by at least five TICA members in good standing;

Attach to application.

33.10.3.2 A proposed breed standard, approved by the Genetics and Rules Committees, including any permissible outcrosses.

Attach to application.

33.10.3.3 An indication that the breed is to be categorized as an Established Breed, a Natural Breed, a Mutation Breed or a Hybrid Breed and the rationale for the proposed category. (See RR 37.1.2).

- X Established Breed (Category I)
_____ Natural Breed (Category II)
_____ Mutation Breed (Category III)
_____ Domestic Hybrid Breed (Category IV)
_____ Domestic x Non-Domestic Source Species Hybrid Breed (Category V)

33.10.3.4 A proposed Working Group Chair for the breed.

Working Group Chair: Stephanie Mohr

33.10.3.5 A processing fee of \$50.

Attach copy of DAR.

THE INTERNATIONAL CAT ASSOCIATION, INC.
TRANSFER NEW BREED *ADVANCEMENT TO* ADVANCED NEW BREED

33.10.3.6 Statistics from the other organizations showing number of cats registered and shown during the last 5 years. If official statistics are not available, then copies of pages from show catalogues may be provided to demonstrate that sufficient cats have been shown and bred in other organizations to ensure it is a viable breed within TICA.

Attach to application.

33.10.4 A Notice of Intent to Apply for Advancement must be published in the TICA TREND at least 120 days prior to the meeting at which the application for advancement will be heard, and which invites comments about the breed to be forwarded to the Executive Office.

Date submitted for publication in the TREND: 12/1/2011 & 2/16/2012

33.10.5 Make a formal presentation at the meeting of the Board of Directors.. Information presented should include photographs, illustrations, statistics, health and breeding reports, representatives of the breed and any other relevant material.

At the meeting of the Board where application is made: 2012 Fall Annual, Columbus, Ohio

BURMILLA BREED GROUP (BM, BML)

The Burmilla Shorthair is a hybrid breed originating in the UK in 1981 from an accidental mating between a (European) Burmese and a Chinchilla Silver Persian. The breed name was formed from a concatenation of the two original breeds – BURM (ese-chinch) ILLA. It is a medium-sized cat in all respects. The Burmilla Longhair is the longhaired version of the breed.

Pattern.....	7
Length.....	5
Texture.....	5

CATEGORY: Traditional, Sepia

DIVISIONS: Silver and/or Smoke,
Shaded and Chinchilla Pattern ONLY

COLORS: All

PERMISSIBLE OUTCROSSES: NONE

HEAD:

Shape: Gently rounded top of head with medium width between ears; wide at eyebrow level and jaw hinge, tapering to a medium, blunt muzzle.

Ears: Medium to large, broad at base with slightly rounded tips. Set with a slight forward tilt in profile. Viewed from the front the outer line of the ear continues that of the face. This may not

be so in mature males which develop a fuller cheek.

Eyes: Large and expressive; placed well apart at a slightly oblique setting; curved upper line angled towards the nose with a fuller curved lower line. Eye color is luminous outlined with the basic color. Color any shade of green, but clear green is preferred. A yellow tinge acceptable in kittens and young adult cats. In reds, creams, and torbies amber is allowed.

Chin: Firm chin with good depth.

Nose: Tip of nose and chin should be in line.

Profile: A definite nose stop at eye level with no appearance of a break; straight nose bridge; level bite

Muzzle: Good width at the jaw hinge, tapering gently to a medium, blunt finish with gentle curves. Neither pointed nor excessively rounded.

BODY:

Torso: Medium size and length. Rounded chest medium in width. Back straight from shoulder to rump.

Legs: Legs proportionate to the body. Hind legs slightly longer than forelegs.

Feet: Medium oval.

Tail: Medium to long with medium thickness at the base; tapering to a rounded tip.

Boning: Medium

Musculature: Firm and strong.

COAT:

Length:

(BM): Short, smooth-lying with sufficient undercoat to give a slight lift.

(BML): Medium long except over the shoulders; should appear dense but lie flat over the spine; should lengthen down the body to form fringes or “frills” along the lower edges of the body and underparts. A ruff is desirable in mature cats. Ear tufts, furnishings are preferable. Full tail plume is desirable.

Texture:

(BM:) Silky

(BML): Fine, silky without woolly undercoat

PATTERN: Shaded or Chinchilla ONLY. Refer to the UCD for detailed description.

COLOR: Pure silver white ground color, with shading or tipping in the recognized colors. Refer to the UCD for detailed descriptions.

GENERAL DESCRIPTION: The Burmilla is an elegant cat, medium in size, with a sweet and open expression. Their unique appearance is a striking contrast between colored shading/tipping and a pure silver base. Their luminous green eyes are captivating. Burmillas tend to be mellow, outgoing, loving and playful.

LOCKETS: WW

ALLOWANCES: Toe tufts, in longhairs, which make the paws appear larger than they are.

PENALIZE: Bump on end of nose (i.e. Roman nose); extremely shortened muzzle; extreme stop or break; pinched muzzle; weak chin; tabby markings in

tipping; solid colored hairs; uneven tipping; tarnishing in coat. Any color on hocks on chinchillas.

WITHHOLD ALL AWARDS (WW):

Incorrect eye color in adults; cobby or Oriental body type; shaggy coat in Shorthair; excessive undercoat in Longhair.

DISQUALIFY (DQ): Tail faults as fixed deviations

Temperament must be unchallenging; any sign of definite challenge shall disqualify. The cat may exhibit fear, seek to flee, or generally complain aloud but may not threaten to harm. In accordance with Show Rules, ARTICLE SIXTEEN, the following shall be considered mandatory disqualifications: a cat that bites (216.9), a cat showing evidence of intent to deceive (216.10), adult whole male cats not having two descended testicles (216.11), cats with all or part of the tail missing, except as authorized by a board approved standard (216.12.1), cats with more than five toes on each front foot and four toes on each back foot, unless proved the result of an injury or as authorized by a board approved standard (216.12.2), visible or invisible tail faults if Board approved standard requires disqualification (216.12.4), crossed eyes if Board approved standard requires disqualification (216.12.5), total blindness (216.12.6), markedly smaller size, not in keeping with the breed (216.12.9), and depression of the sternum or unusually small diameter of the rib cage itself (216.12.11.1). See Show Rules, ARTICLE SIXTEEN for more comprehensive rules governing penalties and disqualifications.

Greetings.

I am writing to you at this time because you are either on the TICA Rules Committee or the TICA Genetic Committee.

First, to introduce myself, I am T'Pell Wilson, a woman living in Houston, Texas. I am the Breed Contact for the Nile Valley Egyptian breed. I am also a representative of the Nile Valley Egyptian Association, and a local representative for Egyptian Cat Rescue of America. I have also been an amateur Egyptologist for decades.

We have fulfilled all the rules that I have been made aware of, in hopes of consideration by the TICA board of directors May meeting, for our application to move the Nile Valley Egyptian out of the Experimental program into Registration Only.

It has become obvious to us that we face a truly unique challenge with our breed, and I am writing to you at this time to point out this challenge and ask for your kind forbearance, and assistance with what we are trying to accomplish.

For our purposes, TICA has two rules that are absolute, but are also in total conflict. The real question we have been debating amongst ourselves is which rule the Board of Directors will decide has the greatest priority. As far as I know, this particular conflict has not been addressed, at least in a situation such as ours, and I would like to point out this conflict and ask that the board of directors consider ruling in our favor.

The two conflicting rules are:

1. A Natural Breed is a breed created by cats, **WITHOUT HUMAN INTERVENTION**.
2. No new breed can look like any other currently recognized breed.

In order for the Nile Valley Egyptian to be recognized by TICA as a Natural Breed, either one rule, or the other, must be set aside.

We are asking that the second rule be the one set aside; here are our arguments.

The Nile Valley Egyptian is a natural breed, and in fact, there is more and more scientific evidence being brought forward that the ancient myths and legends are true: that they are the direct descendants of the earliest ancestors of the modern domestic cat, unchanged by human intervention since the days of the Pharaohs 4,000 years ago. While one might argue that they are the first human-developed modern cat breed, there is a second fact that outweighs that: that it is forbidden by both Islamic law and by modern Egyptian culture, to keep companion animals. As a result, for the 1,500 years since Egypt as a whole adopted the Islamic faith, cats in Egypt have lived feral.

Therefore, for the past 1,500 years, cats in Egypt have been breeding on their own, **WITHOUT HUMAN INTERVENTION**, thus fulfilling all the rules for Natural Breeds, and, indeed, making it the oldest of all the Natural Breeds.

However, we have found ourselves struggling with the TICA requirement that the cats cannot look like any other breed. The truth of the matter is, since they are the direct descendants of the original ancestor breed, they don't look like other breeds, **ALL OTHER NEWER BREEDS LOOK LIKE THEM**, to one degree or another.

That is not the fault of the cats. **THEY WERE THERE FIRST**, they simply have never had the protection of any cat registry, since the people of their country took no interest in them or any companion animals.

We have discussed this issue amongst ourselves for the past 2 months, and we have come to a firm decision: our goal is to preserve the ancestral cat of Egypt, not change it into something that it is not.

Therefore, we are not going to attempt to breed the Nile Valley Egyptian into a breed that doesn't look like any existing breed. We are not going to breed these cats so as to change them.

These cats, as they are, are unique, and we feel that to change them would destroy every unique qualities that they have. These qualities are:

1. The broadest gene pool of any groups of cats. (Dr. Leslie Lyons, UC Davis, et al)
2. Potentially, the genetically healthiest group of cats in the world. (Since they have been living feral without good food, water, or health care, and breeding freely under the worst possible circumstances, it is unlikely that any serious genetic disorders could have survived for long.)
3. The closest relationship to the ancestor of all domestic cats, the African wild cat, *felis Lybica*. (They are still carrying genes that might never have been exported from Egypt, and might be recoverable with a well-planned genetic program. This would result in a cat that is fully domesticated, but looks like a wild cat, without any hybridization at all, and in which the only "human intervention" is to seek out those existing genes, and standardize them.)

Any attempt to make them look different from any currently recognized, but more recently created, breed would destroy the first 2 unique qualities.

We imagine a day in which breeders of all breeds look to these cats for improved health in their own bloodlines. A single native cat of Egypt, because of the broad gene pool, would potentially introduce more genetic variety than any other breed or feral cat, without introducing potential health risks. And because they are the ancestor breed, they have many appearance traits in common with any recognized breed, thus taking fewer generations to eliminate any out-of-breed appearance in their progeny.

Thus, we are asking you to consider carefully which of these two rules you are going to choose in deciding on our application. Do you insist that all breeds must **LOOK** different (a rule created decades before modern genetic testing and understanding), or do you insist that a Natural Breed must be "created without human intervention"?

With our cats...you can't have both.

We think our cats are very special, unique even, and very precious, just as they are. We think they represent an opportunity for the cat fancy to increase the health and well-being of all recognized breeds. We also think that they represent an opportunity for scientific exploration of not only the ancient origins of the modern domestic cat, but also the ancient origins of the process of domestication itself. At this time, the cat is the ONLY mammal about which we now know the exact location, and the exact date (within a couple of hundred years) of its domestication.

We wish to maintain records of cats exported from the country, so that in the future, breeders wanting some of those very valuable genes will be able to select Egyptian breeding stock with confidence, without having to do a lot of expensive genetic testing. We selected TICA to approach with this project, as TICA is the 2nd largest cat registry in the world, and advertises itself as "the friendly registry", and because we have already noted that the largest registry has a long history of conservatism, not to mention other problems.

If TICA sets aside the "without human intervention" rule, in favor of the "must not look like any other recognized breed" (NOT "pre-existing breed", since these cats existed as a breed long before any other modern breed), then we will be looking to find another registry that will accept these cats as they are, rather than taking the step of changing them in any way.

If we cannot find such a registry, we will probably set up our own registry.

We have no interest in awards. We would like to be able to bring our cats to shows so that other people (and breeders) can see them, but we have no need to put them on the judge's table. If it would help, we would be happy if TICA would accept them into the Registration Only status, and then create a new rule that the Nile Valley Egyptian cannot advance to Preliminary New Breed Status, in perpetuity.

That would assist us in registering our cats, maintaining breeding records, and bringing cats to shows as "Exhibition Only". "Standards" would not be needed, as they would never appear before a judge, and therefore, the fact that they look like other breeds would not be a factor.

We hope that you will seriously consider our petition.

In service to cats everywhere,
T'Pell Wilson

P.S. Claims that the cat was domesticated 10,000 years ago in the Fertile Crescent have been made. These claims have never been scientifically substantiated. The incident cited involved finding a cat in a burial with a woman. DOMESTICATION CANNOT BE PROVEN FROM A CORPSE, it is a "behavior", and without seeing the cat alive, there is no way that it can be proven that it was indeed domesticated. There IS precedent of wild animals being buried with humans, so the conclusion that "because it was buried with a human makes it domesticated" is scientifically invalid. However, it doesn't really apply anyway, as we do know from genetic studies that any such previous domesticated cat breeds DID NOT SURVIVE TO THE MODERN DAY. Our MODERN domesticated cat has been proved to be descended from the African wild cat, felis Lybica, and no other, and is NOT a hybrid of different cat species, as

scientists used to insist. This argues that they all had a common and restricted geographical origin, and Egypt appears to be that site. (Cat mummies have been found in Egypt which are pure felis Chaus, but they are extremely rare, and all the other cat mummies investigated to date are pure felis Lybica. There is no evidence, scientific or archaeological, to indicate that the ancient Egyptians ever cross bred two felis species, as no such cross-bred cat mummy has ever been found.)

P.P.S. Since I am in Houston, I can be available in Harlingen to answer questions during the May board of directors meeting, if that would be of assistance.

THE INTERNATIONAL CAT ASSOCIATION, INC.
EXPERIMENTAL NEW BREED ADVANCEMENT TO REGISTRATION ONLY

33.3.3 Advancement from Experimental New Breed to Registration Only New Breed. An Experimental New Breed may apply for approval of the Board of Directors as a Registration Only Breed upon completion of the following:

Name of breed: Experimental Nile Valley Egyptian

33.3.3.1 At least 1 year has passed since the initial registration of the breed in the Experimental Registry.

Date of initial registration of the breed: Aug. 30, 2010

33.3.4.2 At least 10 cats of the breed have been registered in the Experimental Registry.

List cats by name and registration number:

1. Tanta 01T 030109 090

2. Mause 01T 040108 123

3. Moza 01T 040105 118

4. Shahira 01T 011506 040

5. Neithhotep of Maati 01T 061009 055

6. Narmer 01T 050110 103

7. Benerib 01T 100109 065

8. Khenthap 01T 110109 048

9. Seshemetka 01T 102910 028

10. Djet 01T 102910 26

33.3.4.3 At least 5 litters of the breed have been registered.

List litter registration number below. Attach copies of the litter registration certificates:

1. 02T 073010 QQ

2. 02T 062011 W

3. 02T 041907 RR

4. 02T 110707 GG

5.

33.3.4.4 At least 3 TICA members in good standing from 2 different Regions are on record.

List member, region and membership number:

1. T'Pell Wilson

2. Tamara Fretz

3. Carol Anne Green

33.3.4.5 Submission of an electronic Application for Advancement to Registration Only Breed 90 days prior to the Board meeting at which recognition is sought to each member of the Genetics Committee and each member of the Rules Committee. Following approval of the application by the Genetics Committee and Rules Committee, the application will be submitted by

THE INTERNATIONAL CAT ASSOCIATION, INC.
EXPERIMENTAL NEW BREED ADVANCEMENT TO REGISTRATION ONLY

the Chair of the Rules Committee to the TICA Executive Office at least 60 days prior to the Board Meeting for inclusion in the agenda. Any comments of the Genetics Committee or Rules Committee must be included. (Applications available from the TICA Executive Office or at TICA.org.)

33.3.4.6 Application must include the following: (Applications available from the TICA Executive Office or at TICA.org.)

A brief description of the breed distinguishing it from other breeds recognized by the association.

Attach to application.

A proposed breed name that is unique.

Name: Nile Valley Egyptian

A proposed two-letter registration code.

Code: NV

A proposed breeding program.

Attach to application.

A proposed designation of Breed Classification (See 33.2).

☒ **Native Breed**
☐ **Mutation Breed**
☐ **Domestic Hybrid Breed**
☐ **Domestic x Non-Domestic Source Species Hybrid Breed**

A proposed provisional Working Group Chair.

Name: T'Pell Wilson

A processing fee as specified in the Standing Rules. (303.3.4.6 A processing fee of \$50 will be required at the time of application.)

Include copy of DAR in application packet.

33.3.5 A Notice of Intent to Apply for Advancement to REGISTRATION ONLY Breed status must be published in the TICA TREND at least 120 days prior to the meeting at which the application for advancement will be heard, and which invites comments about the breed to be forwarded to the Executive Office.

Date submitted for publication in the TREND: published in Oct/Nov 2011 issue, Vol. 32, No. 6

FOR INFORMATION ONLY:

33.3.6 Upon official acceptance by the Board of Directors as a Registration Only Breed, cats will be registered in the Stud Book or Foundation Registry. (See 36.2, 36.3, 36.4, 36.5, 36.6.) The approved two-letter registration prefix will be used (without EX).

33.3.7 It is understood that acceptance for advancement to Registration Only implies only that TICA agrees to provide registration facilities for development of the breed in question. There is no explicit or implied guarantee that TICA will accept the breed for championship either simultaneously or at any time in the future.

Nile Valley Egyptian Breed Group (NVE/NVL)

The Nile Valley Egyptian (NVE) and Nile Valley Longhair (NVL) are natural Egyptian breeds of medium to large size. Standards for both breeds are identical, with the distinguishing feature being a short hair coat (NVE) or semi-longhair coat (NVL).

Category – Traditional

Divisions – All.

Colors – All

Permissible out crosses – none

Head:

Shape – Round, Medium Length and width

Eyes - Almond shape, light green, light brown, and green/brown.

Ears – Medium-sized, wide at the base, set slightly back, triangular, slightly rounded at the tips. Distance between ears should be narrower than the width of the base of the ears.

Nose – Even width, medium length.

Profile – Gentle rise from bridge of nose to forehead which then flows into arched neck without a break.

Muzzle: Medium-rounded, neither short nor pointed, rounded planes blending with overall head shape.

Body:

Torso – Balance between cobby and foreign type. semi-foreign

Legs – Medium to long. Even length front and back

Feet – Medium size, oval

Tail – Medium to medium long, medium thickness with slight taper

Boning – Medium

Musculature – Well Muscled

Coat:

Shorthair – Medium. No noticeable undercoat. Texture – May be silky or slick.

Longhair – Semi-long with no undercoat. Plumed tail. Texture – silky

Pattern: All.

Colors: All.

General Description: The Nile Valley Egyption is a Natural breed with the conformation of felis lybica, the African wild cat, and the coat/colors/patterns of the modern native Egyptian cat, created solely from native Egyptian cats with no hybrids. The appearance should be a medium to a very large cat of medium proportions, with short to semi-long hair. May have a neck ruff and/or plumed tail in the semi-longhair. In the Tabby divisions, mantle markings may be striking lighter than legs, tail and face.

Allowances: Eye Color: brown/green

Withhold all Awards: Cobby or Oriental body type, Persian double coat or points.

LYKOI CAT

HEAD	35 points
Shape	8
Ears	7
Eyes	6
Muzzle/Chin	6
Profile	4
Nose	3
Neck	1

BODY	30 points
Torso	7
Boning	5
Musculature	5
Tail	5
Legs	4
Feet	4

COAT/COLOR/PATTERN ...	35 points
Texture	20
Color	10
Length	5

CATEGORY: Traditional.

DIVISION: Solid.

COLOR: Black ONLY.

PERMISSIBLE OUTCROSSES:
Domestic Shorthair, not a member of a recognized breed, BLACK ONLY.

HEAD:

Shape: Modified wedge with rounded contours in good proportion to the body; longer than wide, but not extremely long.

Eyes: Large, rounded oval, slanting upward with an open expression. Rims are hairless.

Ears: Large, wide at the base with pointed tips. Set high on the head, vertical and erect, approximately one ear width apart. Outer surface is always hairless.

Muzzle: Fleshy, gently rounded whisker pads. Definite whisker break. Medium length. Hairless to partially hairless.

Chin: Well-developed, aligned vertically with the nose. Full, neither projecting nor receding, having a rounded

appearance. Frontal end ranges from hairless to sparsely coated..

Profile : An obvious curve from brow to bridge continuing to a slight concave curve, ending in a straight nose.

Nose: Leather to the touch, slightly rounded down at the tip. Hairless.

Neck: Medium length, neither thin nor overly muscular.

BODY:

Torso: Foreign; lithe having solid weight without excessive bulk. Level back.

Musculature: Slender without bulk.

Boning: Fine.

Legs: Medium length forming a rectangle with the body.

Feet: Small to medium, oval with long toes.

Tail: Shorter than the torso, tapering gradually to a point.

COAT/COLOR:

Length: Short to medium.

Texture: Partial hairlessness to hairless with no undercoat; longer guard hairs. Texture appears coarse, but feels soft to the touch. Resembles the coat of an opossum when mostly coated. The hairless areas feel leathery to the touch. The sparse hair or hairlessness around the eyes, nose, muzzle and chin gives the appearance of a mask covering the face. This is similar to the thermal gene pattern seen in pointed cats where the cooler areas are darker. In this case the cooler areas have less hair.

Color: Black with amelonistic (white) hair intermixed, resembling the roan pattern seen in other species.

GENERAL DESCRIPTION: “Lykoi” is an ancient Greek word meaning “wolf”. When one looks straight into the face, the cat has the appearance of the mythical werewolf. The Lykoi Cat is a partially hairless cat that can be almost entirely hairless to mostly coated. The hair coat is unique in appearance in that it resembles the coat of an opossum when mostly coated. The Lykoi Cat is the result of a

natural mutation that has been reported intermittently over the past few years. The breed was started from two separate sibling litters in 2011. The Lykoi Cat is very friendly and demands attention. Most people find them unattractive upon first sight, but then want nothing to do but hold them and feel their wonderful coat. Others want a "little wolf" from the beginning.

LOCKETS: Allowed

ALLOWANCES: Stud jowls in males. Variations in hairlessness during phases of growth.

PENALIZE: Any undercoat. Absence of white hair mixed into normal black coat color.

WITHHOLD ALL AWARDS (WW): Incorrect color. Absence of hairless face mask.

Temperament must be unchallenging; any sign of definite challenge shall disqualify. The cat may exhibit fear, seek to flee, or generally complain aloud but may not threaten to harm.

In accordance with Show Rules, ARTICLE SIXTEEN, the following shall be considered mandatory disqualifications: a cat that bites (216.9), a cat showing evidence of intent to deceive (216.10), adult whole male cats not having two descended testicles (216.11), cats with all or part of the tail missing, except as authorized by a board approved standard (216.12.1), cats with more than five toes on each front foot and four toes on each back foot, unless proved the result of an injury or as authorized by a Board approved standard (216.12.2), visible or invisible tail faults ***if Board approved standard requires disqualification*** (216.12.4), crossed eyes ***if Board approved standard requires disqualification*** (216.12.5), total blindness (216.12.6), markedly smaller size, not in keeping with the breed (216.12.9), and depression of the sternum or unusually small diameter of the rib cage itself (216.12.11.1). See Show Rules, ARTICLE SIXTEEN for more comprehensive rules governing penalties and disqualifications.

Description of Toybob Breed

Toybob is unlike other breeds in many respects. Many new breeds have begun with the deliberate crossing of two dissimilar breeds (Category IV) in order to combine certain traits that are found in each breed naturally. Other new breeds originated through the deliberate selection for breeding of cats with specific traits, despite the presence of other traits in the same litter. The miniature (not dwarfish) Toybob cats, with bobbed tails, did not originate through the long and deliberate crossing of breeds or selection of individuals with specific characteristics, including bobbed tails and small size. The Toybob breed originated through genetic mutations, the combination of which resulted in a cat of just the right type and size. Their unique set of genes does not exist in any other breed. For example, miniature Persians share the same set of genes as their larger relatives and are selected for size. Consequently, a small kitten can surprisingly grow into a large cat. The specific genotype for Toybob is still largely unknown, but their phenotype is consistent and unique. The breed does not have a long enough history to know whether specific genes are recessive or dominant. To a small extent, there may be some incomplete penetrance exhibited through traits that skip one generation and reappear in the next.

With their unique set of genes, these cats have developed characteristics that are not typical of their environment. For example, Toybob cats generally live more than 20 years (all who are now deceased are known to have lived 22-24 years). They are surprisingly healthy, with very strong immune systems. Despite testing positive by titer for exposure to FeCOV, all have tested negative by fecal PCR for the virus itself. Despite exposure to the virus, their systems quickly eliminate it. This is a consistent result for Toybob cats. There are also no known cases of Toybob death by FIP or FeLV. No genetic diseases (e.g., GM2, PKD, HK) have manifested in the breed. They rarely have health problems. Unlike other breeds, the Toybob female experiences infrequent heat cycles and bears litters that typically number from one to three kittens. Toybob mothers at 20-22 years of age have been known to give birth to healthy litters! The kittens are fully formed, of normal birth size and weight, and initially grow at a normal rate. However, their rate of growth slows as they mature and they do not achieve “normal” size for an adult. Toybob cats rarely express dominant behavior. Males coexist in the same space peacefully, without marking. Toybob cats appear to have a matriarchy, with females as the more dominant gender.

Toybobs do not require any special diet. They eat the same foods as do other breeds, without gaining weight. At 9 years of age, the first TICA-registered Toybob cat still weighs less than 4 pounds, with a normal appetite and perfect white teeth. Toybob cats rarely speak; but, when they do, their voice resembles that of a puppy barking. They seldom run, but will often follow their humans like dogs at heel.

Although there are many miniature canine breeds, there are few among felines. There have been many attempts to develop miniature feline breeds, but most have been unsuccessful. The early “man-made” Persians were generally fragile and weak. Other breeds have not progressed far because of frequent deaths attributable to weak immune systems. Toybob is a breed created by nature. Without too much unnatural interference, the breed can continue to develop positive traits such as good health, pleasant demeanor and adaptability.

Breeding Plan for Toybob Breed

The Toybob is a very new, developing breed. Unfortunately, during the first 20 years of its existence, there were few efforts made for future development of the breed. For several generations, kittens were given to friends and family as pets. All kittens were healthy and strong, of good type, but only a few were kept for breeding. Consequently, after 20 years, the breed was only three generations removed from the original Toybob sire. The original breeder is no longer active; and, even now, there are very few active breeders, but there is growing interest and more breeders are starting to get involved.

Approximately 6 years ago, work began simultaneously in Russia and the USA to rebuild the breed. Because of that effort, there are now five distinct blood lines, two in the USA and three in Russia. From these blood lines, breeders will work to rebuild and further develop the breed, while maintaining the unique natural gene pool.

Considering the current situation of this practically lost breed, the key problems for breeders now and in the near future are as follows:

1. Preservation of the existing gene pool from the limited number of available cats.
2. Expansion of the gene pool through outcrossing to physically similar breeds, such as Thai (for preservation of type). To a lesser extent, outcrossing to related breeds, such as Oriental, Burmese and Tonkinese, would be permissible, for certain traits, such as color and demeanour. Domestic shorthair cats can be used if they are close enough in type. Subsequent breedings would be needed to retain the other key traits of small stature and bobbed tail.
3. Working through the outcrossings to establish future generations of cats that will be consistent with a standard similar to that already accepted by the World Cat Federation (WCF). Toybob is expected to gain Championship status in the WCF in August of 2012. A draft of the same, or similar, standard will be proposed to TICA at the appropriate time.

Although the original color of seal point, possibly with white mittens, was preserved for 20 years, any color is now permissible, owing to the need for outcrossing. The rebuilding effort in Russia and the USA has produced three more generations. There are now breeding cats in solid black, solid white, blue, red and tortie. All of those are still considered hybrids, with another breed represented within a 3-generation pedigree. The goal is not to introduce new colors so much as it is to lessen the impact of in-breeding on this new, developing breed. The need for outcrossing is intended only as an interim stage in developing a healthy breed. Offspring for future breeding will be selected based on genetically small size, on tail construction, and on general type. Ideally, the tail will consist of 3-5 vertebrae. The type will be consistent with the proposed written standard. The small stature must not be due to malnutrition or congenital defect.

Our task now is to attract a large number of breeders to work for the breed. However, there will need to be serious control over the selection of cats for future breeding. Our overall objective is not to quickly create miniature cats from hybrids. It is to preserve the phenotypes of type (most important) and size through careful selection of cats for breeding. We must work to bring the type closer to the standard by retaining the smallest of those offspring who are closest to the standard for type. This will be the responsibility of breeders in the next couple of years. Hopefully, after a few years, there will be less need for outcrossing. When the breed is ready for advancement to the next level in TICA, we hope to have healthy breeding stock that consistently reproduces small size, bobbed tail and standard type.

From: Jenni Toivoniemi <jenni.toivoniemi@gmail.com>

To: Ralph Stadter <ralph.stadter@gmx.net>

Dear Ralph,

With great concern i read about a breed called "Toybob" in the Trend and learned that people behind it would like to move on to Registration Only status at the Annual Meeting in September. I really hope you will vote against that for several reasons.

1) The Toybob people claim that the breed has a new mutation that causes miniaturization in a healthy manner, but they offer no proof of that. In every case in the past, so-called "toy" breeds of cat have turned out to be miniaturized due to intensive inbreeding. Toybobs are extremely small and that is alarming. If they have responsibly bred the breed to be small they should have pedigrees to prove it and that would have took a lot of time. Toybob breeders are claiming that the small size of the breed is completely new single and harmless gene that causes it. That would be extraordinary finding and should be proved before advancing. Unless they have a solid proof I think we have to assume Toybob is yet another case of unhealthy miniaturization.

2) I am worried about the reputation of TICA in Europe. In Finland and other Nordic countries I get to defend TICA all the time as many people think of TICA as this crazy association that will register anything and approve any crazy mutation breeds. I do know the procedure of establishing a breed in TICA is not so simple, but accepting a breed like Toybob even only to Registration only status would be yet another reason for these critics to slander TICA. I think TICA needs to take a stand and not just register anything, even if it lures in money and more people. In order to be respectable we need to focus on the health of established breeds and be very careful to add new breeds. The new breeds we choose to propose have to be based on responsible breeding and genetic health and the burden of proof is in the hands of the breeders who are proposing the new breed.

3) The Toybob wants to outcross to Thais and look like Thais. As a Thai breeder and a member of the Thai breed committee I really don't want my breed to be associated with miniaturization and its health problems. I am afraid next people will be claiming that miniaturization came from the Thai breed or was "natural" to the "original Siamese." That is not the case and we want our breed not to be involved in anything like this.

4) The Toybob also wants to outcross to Burmese. Burmese breeders are already dealing with a known miniaturization problem and several known serious genetic health problems. This again is not a responsible breeding plan.

5) We already have many established and new breeds with bobbed tails. Most of them are based on Manx gene (that is deleterious and therefore should be used only carefully) . As Toybob is developed

in Europe it is most likely that it's bobbed tail gene is also European origin (the Manx gene). There are at least Mekong Bobtail and Jungle Bob breeds proposed along with the new breeds like Pixiebob and Highlander that still need time to be truly established. Not to mention we have wonderful traditional breeds like Japanese Bobtail and Kurillian Bobtail that deserve more attention. We should also take care that Manx has it's place as an old traditional breed and not just to be used as a material for experimental new breeds. I don't think it is wise to keep adding more and more breeds with bobbed tails as we already have our established breeds to take care of.

Thanks for listening, I hope you make a responsible vote in September,

Best wishes,

Jenni Toivoniemi

KURILIAN BOBTAIL BREED GROUP (KB/KBL)

The Kurilian Bobtail Shorthair (KB) is a Natural Breed, domestic cat, that traces its ancestry to the Russian Kamchatka peninsula, Kuril Islands and the island of Sakhalin. This cat has substantial boning and is known for its pom-pom like tail. The Kurilian Bobtail Longhair (KL) is the ~~semi-~~ longhaired version of the breed.

HEAD 40 points

Shape ~~10~~ **12**
 Eyes ~~5~~ **6**
 Ears ~~10~~ **5**
~~Muzzle/Chin~~ ~~9~~
 Muzzle **7**
 Chin **2**
~~Nose/Profile~~ ~~6~~
 Nose **3**
 Profile **5**

BODY 40 points

Torso ~~9~~ **8**
~~Legs/Feet~~ ~~8~~
 Legs **5**
 Feet **1**
 Tail **15**
 Boning ~~4~~ **6**
 Musculature ~~4~~ **5**

COAT/COLOR 20 points

Length ~~7~~ **5**
 Texture **10**
 Color/Pattern ~~3~~ **5**

CATEGORY: Traditional.

DIVISIONS: All.

COLORS: All traditional colors.

PERMISSIBLE OUTCROSSES: None.

HEAD:

Shape: Large, moderate ~~modified~~ wedge with rounded contours, wide at the cheekbone level.

Eyes: ~~Walnut, oval on top and round on bottom.~~ **Moderately large, oval on top round on bottom.** Set on slight angle between base of ear and tip of nose one eye width apart, ~~moderately large.~~ Color to be clear, brilliant, no relation to coat color. White cats, vans and harlequins can have blue or odd eyes.

Ears: Medium-sized, wide at the base,

slightly ~~stopped~~ **tipped** forward. Distance between the ears is equal to the width at the base of the ear. Ears are triangular in shape, ~~slightly~~ rounded at the tips. Light to ~~medium~~ **heavy** furnishings **depending on the coat length.**

Muzzle: Rectangular muzzle, wider than long, slightly rounded with an obvious whisker break.

Chin: ~~Well-developed wide chin. A bit rounded in profile.~~

Nose: Medium in length, broad and straight.

Profile: Flat to ever-so-slightly rounded forehead with a very slight dip at the eyes and a straight nose.

BODY:

Torso: ~~Medium to large, compact, semi-cobby. Chest is broad. Back may be slightly is arched. Rump slightly is raised. Females may be noticeably smaller than males.~~ **Shows depth of flank.**

Legs: Legs medium in length, substantial. Hind legs are longer than front: ~~Legs almost form a square with the body.~~

Feet: Rounded paws.

Tail: Composed of one or more kinks or curves or any combination thereof, appearing as a pom-pom or brush. ~~VISABLE tail length with the coat is from 4.5 cm to 8 cm [5.9-3.15 inches] for the shorthair and up to 13 cm [5.12 inches] for the semi-longhair.~~ May be rigid or flexible or a combination of both (part rigid, part flexible). Size and shape of the tail should harmonize with the common appearance of the cat. When palpated, the tail consists of at least 2 vertebrae, with at least one kink or curve or any amount of combinations thereof. ~~Palpated length of~~

~~the tail is from 1.5 cm to 8 cm [5.9-3.15 inches], counting length of kinks and curves. The tail can be described as "snag", "spiral" or "whisk".~~ The direction of the tail is not important.

Boning: Substantial.

Musculature: Well-muscled, and firm.

COAT:

Length:

(KB): Short, **with well developed top coat and little undercoat.** Tail coat same length as body coat.

(KBL): ~~Semi-long.~~ **Medium length, with well developed top coat and little undercoat.** Britches, toe tufts and ruff are desirable. Tail coat ~~→~~ full and plumed.

Texture: **Overall dense rather fine in texture.**

(KB): Soft, ~~silky,~~ laying flat, resilient without a plush dense feel, ~~moderate undercoat.~~

(KBL): Fine, ~~silky,~~ laying flat, ~~moderate undercoat.~~

Color: All traditional colors accepted. Any amount of white is allowed, including but not limited to: blaze, lockets, chest, belly or paws on any accepted coat color.

GENERAL DESCRIPTION: The Kurilian Bobtail is a naturally occurring bobtailed cat with substantial boning exhibiting a compact semi-cobby body. The impression one gets when viewing the Kurilian Bobtail is one of strength and power. This breed is known as an amazing hunter and fish catcher. They are affectionate and active, and must be in the company of their people.

ALLOWANCES: Standard favors the male. Allowance MUST be made for size difference between the male and female. Breed is slow to mature. Allow for wider head and ear set

on mature males. Lynx tips allowed on ears. ~~Allow up to 12 cm [4.72 inches] palpated length for "snag" or "spiral" tails, counting length of all kinks and curves, if visible length is no longer than 8 cm [3.15 inches] for shorthair or 13 cm [5.12 inches] for semi-longhair.~~

PENALIZE: Tail length that is more than 4 inches [actual length] or less than 2 vertebrae. A Delayed Bobtail effect. ~~Extremely arched back.~~ Slender or oriental in body type and head type. Roman nose. Short hind legs.

DISQUALIFY (DQ): Absence of a tailbone. Deformations of the spinal vertebrae. Any tail without a kink or curve. Tails longer than 6 inches.

Temperament must be unchallenging; any sign of definite challenge shall disqualify. The cat may exhibit fear, seek to flee, or generally complain aloud but may not threaten to harm. In accordance with Show Rules, ARTICLE SIXTEEN, the following shall be considered mandatory disqualifications: a cat that bites (216.9), a cat showing evidence of intent to deceive (216.10), adult whole male cats not having two descended testicles (216.11), cats with all or part of the tail missing, except as authorized by a board approved standard (216.12.1), cats with more than five toes on each front foot and four toes on each back foot, unless proved the result of an injury or as authorized by a Board approved standard (216.12.2), visible or invisible tail faults if Board approved standard requires disqualification (216.12.4), crossed eyes if Board approved standard requires disqualification (216.12.5), total blindness (216.12.6), markedly smaller size, not in keeping with the breed (216.12.9), depression of the sternum or unusually small diameter of the rib cage itself (216.12.11.1). See Show Rules, ARTICLE SIXTEEN for more comprehensive rules governing penalties and disqualifications.

TICA	TASURT SEKHMET	SBT	14-Apr-12

33.8.5 List of judges who have judged the breed.

Addendum D. Judges Who Have Evaluated Chausies at TICA Shows. Below are the judges who have seen the Chausie in PNB or ANB classes from May, 2001, through the present (May, 2012). In parentheses after each judge's name we list one show at which the judge has judged Chausies. That is for corroboration purposes. Most judges have judged Chausies at many different shows.

1. Allen, Roz (Anderson, CA, 4/2-4/04)
2. Anderson, Mary Lou (Tucson, AZ, 12/2-4/11)
3. Arnold, Mary (Anderson, CA, 4/2-4/04)
4. Arrieta, Carlos (Buenos Aires, Brazil, 06/25/06)
5. Ashley, Linda Kay (Anderson, CA, 4/2-4/04)
6. Bailey, Richard (Tucson, AZ, 12/3-5/10)
7. Bangle, Jay (Tucson, AZ, 12/3-5/10)
8. Barnes, Dewane (Lancaster, PA, 11/5-7/10)
9. Barrett, Pamela (Anderson, CA, 4/2-4/04)
10. Barton, Carol (Anderson, CA, 4/2-4/04)
11. Basquine, Genevieve (Ekaterinberg, Russia, 04/29-30/12)
12. Becknell, Sue (ABQ, 10/22-23/11)
13. Berthelon, Brigitte (Ekaterinberg, Russia, 04/29-30/12)
14. Bright, Amanda (Gagny, France, 11/19-20/11)
15. Brooks, Canie (Irvine, CA, 07/30-31/11)
16. Brown, Debbi (New Braunfels, TX, 04/1-2/06)
17. Burch, John (Everett, WA, 07/5-6/03)
18. Caruthers, Don (Buena Park, CA, 3/27-28/04)
19. Chenault, Kim (St. Augustine, FL, 02/26/12)
20. Chisholm, Alex (Irvine, CA, 07/30-31/11)
21. Coleman, Mark (Raleigh, NC, 12/12-14/08)
22. Copeland, Rene (ABQ, NM, 10/30-31/03)
23. Crockett, Ellen (Gagny, France, 06/25-26/11)
24. Cunningham, Laura (Monterey, CA, 02/26-27/11)
25. DeLandtsheer, Mary-Lise (Gagny, France, 06/25-26/11)
26. DeVilbiss, Harley (Arcadia, CA, 4/17-18/04)
27. DeVilbiss, Kay (Lancaster, PA, 11/5-7/10)
28. Dickie, Lisa (Lancaster, PA, 11/5-7/10)
29. Dombroskie, Marilyne (Lancaster, PA, 11/5-7/10)
30. Edwards, Joe (Waco, TX, 02/11-12/06)
31. Faccioli, Luis Paolo (Tucson, AZ, 12/3-4/05)
32. Fisher, Vickie (Anderson, CA, 4/2-4/04)
33. Garrett, Penny (Houston, TX, 01/15-16/05)
34. Grillo, Linda Jean (Anderson, CA, 4/2-4/04)
35. Hackmann, Anneliese (Houston, TX, 03/13-14/04)
36. Hammond, Elektra (Lancaster, PA, 11/5-7/10)
37. Hammond, Michael (Lancaster, PA, 11/5-7/10)

What We Have Learned So Far About Egyptian Native Cats

+99% of all Egyptian cats are homeless and feral. This is due to both religious and cultural issues in Egypt, and this situation has existed for the past 1,500 years, so the Egyptian native domestic cat is thoroughly genetically adapted to feral life. What astonishes us about this group of cats is that they also appear to be extremely sociable towards humans...many feral-born kittens will approach humans on the street and attempt to make friends with them, and some feral-borns have adapted to a purely indoor companion status with surprising thoroughness.

Oldest? Dr. Leslie Lyons, UC Davis, et al, have found during their studies of domestic feline DNA from around the world that the Egyptian feral population appears to have the largest genetic diversity of any group of cats, feral or pedigreed. Current understanding of genetics leads to the conclusion that this means that the feral Egyptian population are the oldest existing domestic feline population in the world. Since their genetic diversity contains the diversity of all the other studied groups, it also appears that the ancestors of the current-day feral Egyptian population were also the ancestors of all existing domestic cat groups around the world today.

Cairo: Legend places the domestication of the cat in ancient Egypt within the temple complex at Bubastis. That location today is called Zagazig, and is a suburb of Cairo; therefore, we have reason to believe that observations in Cairo are highly valid in our exploration of the Nile Valley Egyptian. With time, we hope to expand our observations as far away as Abu Simbel, in the extreme south of the Nile River valley of Egypt.

X-Linked Red Gene: It has been reported that half of all cats in Cairo are red or have red in their coats. Observations would indicate that this is due to the x-linked red gene. Therefore, there is evidence that the x-linked red gene mutation first occurred in Egypt.

White Spotting Factor: Our observations are that more than half of all cats in Cairo shows signs of the white spotting factor gene. Our conclusion is that this gene, also, is a mutation that occurred very early on and in Egypt.

Dominant White: We have seen only one potential case of an all-white cat. On researching this cat's background, we discovered that it had an imported white Persian in its background. Our observations so far would argue that the dominant white gene mutation took place outside of Egypt, and was never imported back into it (until recent years).

Siamese: We have observed no instances of temperature-dependent coloration (the "Siamese" gene).

Eye Color: Our observations so far have been consistent in eye color, in a very startling fashion. The cats that we have had the opportunity to observe over time as they mature have all exhibited the same heretofore unknown pattern of eye color.

Birth: dark gray or blue, to the point that they almost appear to be as black as the pupil.

1-to-3 months of age: eyes turn to a pale brown. This is not the brown of human eye color, but a very pale color, one that we liken to the shades of brown seen in papyrus.

6 months to 2 years: eyes gradually, from the pupil outward, turn to a pale peridot green.

All adults over the age of 2 years that we have examined have demonstrated *only* the peridot green color, with a single exception. This was a 2-year-old male whose eyes were brown; however, he had a Persian body type, and was also first degree inbred, so we strongly suspect that he had recently imported Persian in his ancestry, and tend to discount him as an example of the native Egyptian feral. (I would call this "the exception that proves the rule".)

Size: Within Cairo, the native Egyptian cat appears to be a small domestic cat. However, these animals are living feral on the streets of Cairo, where it has been estimated that there are 5 million feral cats. Competition for food is high, the food is almost entirely human garbage and wild-caught rodents, clean water is not widely available, and these animals receive no vet care. Once they are removed from their situation and given proper diet, clean water, and vet care, younger animals (under 2 years of age) often demonstrate a growth spurt. The first generation born outside of Egypt are showing signs of being as much as 50% larger than their own parents. As a result, we suspect that the Nile Valley Egyptian will actually turn out to be a medium-to-large cat, not small at all (as observed by Dr. Lyons when she visited the Abu Simbel area in southern Egypt). This would result in a robust cat with medium proportions, medium face, medium to long tail, and long legs. This would also make them very distinct from the Egyptian Mau, which is currently being bred more in the direction of the small and slender Oriental body type.

Colors: Lybica vs. Standard. We are dividing the coat colors into two main types, depending on the presence or absence of the mutant non-agouti gene. As this is a recessive gene and there are large numbers of cats in Cairo with the non-agouti appearance, this is obviously another mutation that happened very early on in Egypt. Cats with at least one agouti gene have a distinctive coat color pattern that more closely matches that of the African wild cat than any other existing pedigreed breed. Because of this, we are referring to this coloration as "Lybica", after *Felis Lybica*, the African wild cat.

Our research into the coat patterns of AWCs has discovered the following pattern:

1. dark high-contrast stripes on the middle third of all four legs;
2. dark high-contrast markings on the forehead;
3. dark high-contrast stripes on the last half of the tail;
4. a variety of markings of different types and different levels of contrast on the back and sides, which we are referring to as the "mantle".

The mantle markings may range all the way from the same contrast as the legs, face, and tail, to be considered 100%, to 0%, or no visible markings at all. Any percentage between 100% and 0% may occur. The mantle markings may be stripes, spots, crescents, broken stripes, or elongated spots, but are consistent throughout the entire mantle area, i.e., you will rarely if ever find stripes and spots within the mantle on the same cat. Variability of contrast in the mantle is emphatically *not* reflected in the markings on legs, face, and tail, which always remains 100%.

The coat markings of the Egyptian feral with the agouti gene follow these same patterns, so we are currently considering them to be "normal" for the Lybica-type coat coloration. The vast majority of Lybica Nile Valley Egyptians are brown (with x-linked red appearing frequently); however, we have also observed, rarely, all-red Lybica, blue Lybica, and rarest of all, silver Lybica coat patterns.

In individuals without the agouti gene, what we are calling "Standard", we see many of the most common types of coat colors found in cats around the world; solid black/blue, x-linked red/cream, with or without white spotting. We have seen enough cats with the "blue" coloration to suspect that the "dilute" gene is also native to Egypt.

One of the more interesting colorations is a combination of black, x-linked red, white spotting factor, *and* the agouti gene, giving a beautiful spotted and marked calico. We see a lot of "tortoiseshell Lybica" females on the streets of Cairo. We are currently investigating the possibility that a lighter brown Lybica color might actually be "cinnamon".

The eye colors observed above are consistent in all cases regardless of the coat color(s) or presence or absence of the agouti gene.

Coat type: Short vs. semi-long. We have observed 2 distinct coat types, with a third intermediate type. Ferals in Cairo seem to be evenly split between a very short, straight, tight coat in which the hairs lie very tight to the skin, giving a smooth coat, and a slightly longer coat very much like the Turkish Angora, with a "fluffy" tail, and a full neck ruff, but basically soft short hair otherwise, in which the ends of the hairs tend to bend away from the skin, giving a slightly longer, and much softer appearance. (We have started referring to the "fluffy" tail as "Ma'at's feather" after the ostrich feather which was the symbol of that ancient Egyptian goddess.) We have seen no signs of anything approaching the length, thickness, or fullness of the Persian coat, or that of other long-haired breeds.

Imported genes: The Nile River valley of Egypt is surrounded by the Sahara Desert on 3 sides, and the Mediterranean Sea on the fourth. This creates a natural barrier to casual migration by animals the size of domestic cats. If, as the legends tell us, the modern cat was domesticated in Egypt (other claims of domestication might be correct, but those bloodlines seem to have died out long ago), the natural flow would have been from Egypt *outward*. There would have been no reason to bring cats into the country until modern times. Today, cats are being imported by pet stores; however, they are almost exclusively Persians, and/or other breeds that are so distinctly different from the feral population that they should be easy to spot and eliminate from NVE breeding. The number of imported cats is extremely low compared to the numbers of native ferals; even escaped imports can have little to no impact on the gene pool of 5 million (in Cairo alone). We are therefore confident that we can breed any and all feral Egyptian cats as long as we avoid any that do visibly demonstrate foreign genes.

Temperament: intelligent, independent, athletic, as befits living in purely feral conditions. Surprisingly human-social, despite 1,500 years of feral living.

For the future

We understand that our observations so far are only preliminary, and that any and all of the above is subject to change as we continue to explore this very ancient natural breed. Our purpose is to observe, record and preserve, not to change the Nile Valley Egyptian in any way.

We plan, for the time being, to restrict the ancestry of the Nile Valley Egyptian to ferals and adopted ferals of the Nile River valley within the boundaries of the country of Egypt. We are certain that this represents the limits of geographical boundaries which would have tended to

keep the NVE bloodlines contained, without outside contamination, over many centuries. (The Egyptian Mau breed council, as one example, allows the introduction of spotted [only] cats from this area, but also permits them from as far west as Tunisia and as far east as India; thus, they do not in any way reflect any natural genetic grouping of feral cats.)

With a potential genetic pool of 5 millions cats in Cairo alone, and the rest of Egypt to draw from, there should be no problem with maintaining the diversity of this breed, especially as 1,500 years of feral living are likely to have weeded out all potentially fatal or impairing genetic conditions. With the largest genetic diversity of all groups tested by Dr. Lyons, et al, we propose that the Nile Valley Egyptian would actually be a viable source of valuable diversity for any and all pedigreed cat breeds in the world. Further exploration and documentation of this breed would assist in such an effort.

Attachments to Application for Advancement from Experimental New Breed to Registration Only

Brief Description: The Nile Valley Egyptian is a natural (native) breed restricted to the geographic area of the Nile Valley within the country of Egypt (Arab Republic of Egypt). It has the conformation of felis lybica, the African wild cat, and the colors and patterns of the modern Egyptian native cat.

Proposed Breeding Program: Permissible outcrosses: none.

The only cats allowed for this program are:

1. cats born of unknown parents within the geographical boundaries of the Nile River valley within the country of Egypt,
2. cats whose known ancestry is entirely made up of the above.

We will be searching the feral cat population for cats that approach the NVE/NVL standard, and also which demonstrate sociability, even in the feral state. At the current time, we mostly have access to cats in Cairo, however, later we hope to expand to other parts of Egypt as well. We are especially excited about expanding into southern Egypt, particularly the area around Abu Simbel and the Aswan Dam area.

Because native Egyptian cats are +99% feral, and have been for 1,500 years, and there are estimated to be 5 million feral cats in Cairo alone, we do not anticipate any problems with pre-existing inbreeding, or pre-existing genetic conditions, as we suspect the vast majority would have been weeded out through natural selection. Dr. Leslie Lyons, UC Davis, et al, found that Egyptian ferals have the broadest genetic diversity of any group of cats she has sampled, including both pedigreed breeds, and feral cat populations from countries around the world, so we expect to be able to avoid the inbred condition by constantly adding new feral Egyptian cats into the program, and by avoiding planned inbreeding and line breeding entirely. We understand that this will make the process a more lengthy one, but prefer it to establish and maintain maximum health in this new breed in perpetuity.

We also will be exchanging promising candidates between the US and Europe. At a future date, we hope to develop the necessary resources to be able to ship frozen feline sperm around the world, so as to cut back on the number of cats that actually have to be physically shipped internationally.

Proposed Breeding Program

Since the four test breedings indicate that the gene appears to be recessive, I will have to do outcrossing to prevent too high of an inbreeding index.

I have four foundation cats. I have a brother and sister from one litter, and a brother and sister from a second litter. I also have the domestic short hair mother from the first litter that has the mutation. I plan to produce Lykoi Cats from breeding the unrelated foundation cats. I also plan to use black domestic shorthair cats that have the appearance that we want in our standard to breed to the foundation cats to produce outcross carriers of the mutation. The offspring of the outcrosses will be bred to unrelated foundation cats to produce Lykoi Cats. Lykoi Cats offspring from foundation cats and outcrosses will be outcrossed with other domestic shorthair cats. Some outcross to outcross breeding will be performed to hopefully produce Lykoi Cats. I am also using a computer program to determine the pedigree and inbreeding index. Since it is a recessive gene, there will be inbreeding eventually in the cats. Using the program, I hope to keep the inbreeding to a minimum. I believe that line breeding is needed to set type in many instances, and some of this may be done. Once again, I hope to minimize any inbreeding were possible.

I plan to place breeder cats with people starting in the fall and winter of 2012. We have had an overwhelming response to the Lykoi Cats on Facebook. Many people have shown an interest in helping start the cats as a breed. I will screen these people. I hope to find people that have breeding experience. We have at this time at least 10 experienced breeders that are interested in helping us.

Examples of head shapes of Earliest Odyssey Khao Manee Foundation cats 2006-2008

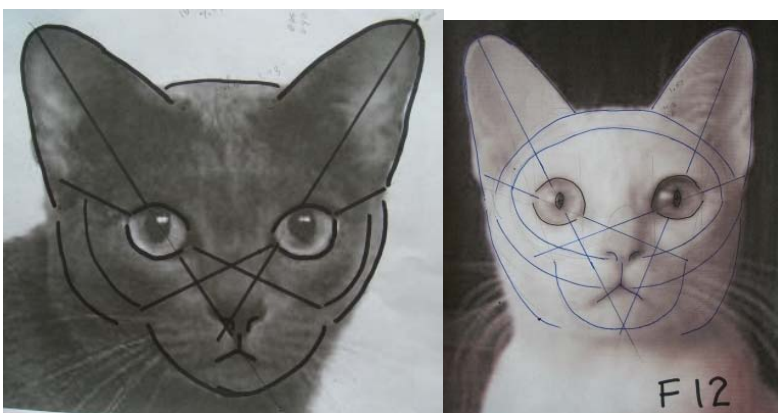

Top row, best, most average male and female, center: geometric drawing, outline, of “Generic” KM of 2007-2008

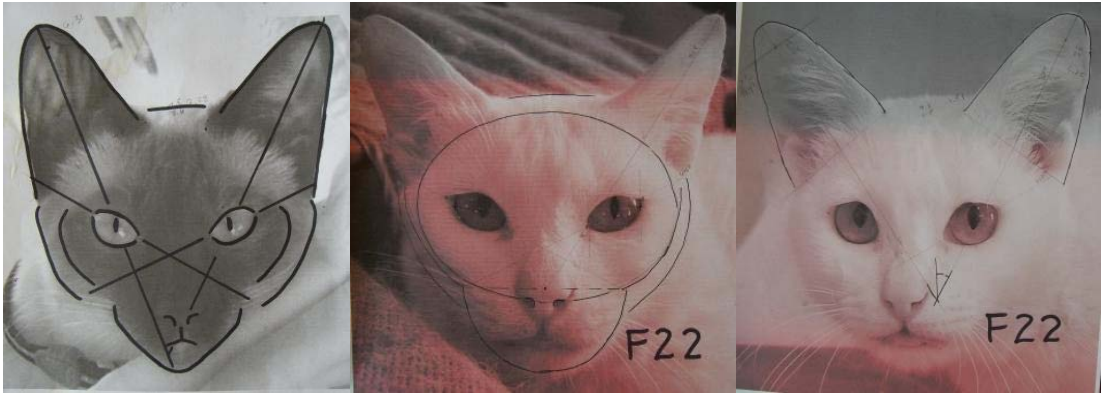

Second row, These are not too far off

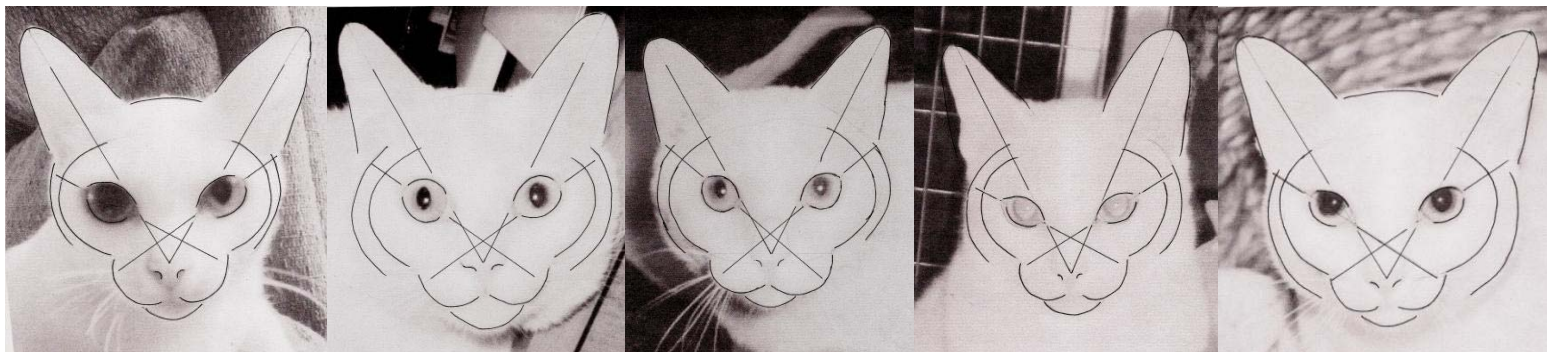

Third and fourth rows, not the looks we are aiming for, but included F12 and F22 in breeding programs.

KHAO MANEE HEAD DIAGRAMS GUIDE

F30 eye 117, ear 62

M30 eye 110, ear 57

M36 eye 99, ear 52

M11 eye 120, ear 51

F9 eye 115, ear 61

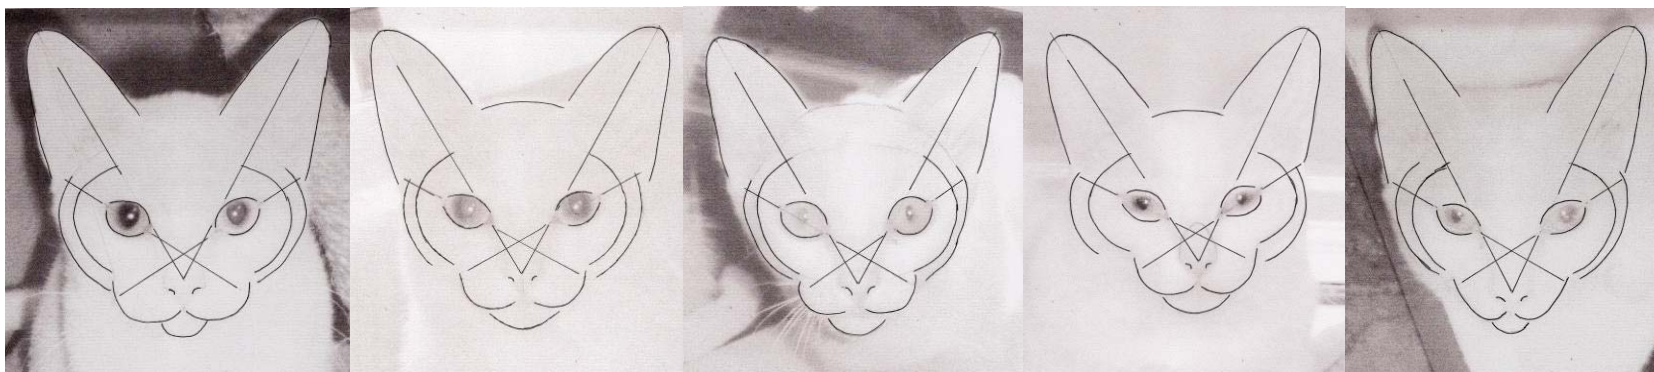

eyes too big and round

eyes too big and round

smallish ears, shortish muzzle

a bit narrow

a bit wide for a female

F8 eye 114, ear 58

F10 eye 122, ear 60

F5 eye 114, ear 60

F24 eye 120, ear 59

F7 eye 117, ear 52

muzzle wide and short

muzzle a bit short

muzzle a bit wide

short, angular face

narrow muzzle, weak chin

Progress toward ANB application for Khao Manee
