**GENERAL DESCRIPTION**

The Selkirk Rex is produced by a dominant gene affecting the guard, down and awn hairs. The curl is most prominent around the neck and tail in both coat lengths. Guard hairs tend to have a coarse texture, but the coat is very dense and overall soft and plush. The whiskers are curly as are the eyebrows. The Selkirk Rex is a medium to large cat with good balance between legs and body. Heavy boning gives the cat surprising weight. Females are less massive than males, but both sexes have definite jowls. Coat continues to develop until about 2 years of age, so kittens should be judged mainly on head and body type. Kittens are curly at birth and may lose their coat and begin to develop an adult curly coat at 8-10 months of age.

**ALLOWANCES**: White lockets are acceptable. Kittens may lack fully curly coat.
